Walter Schlifer (walter.schlifer@doghous.com) wrote:

: Out of my own personal curiosity,
: How many HAMS in this Net participate in Field Day?

: HAMS, lend me YOUR Stories! I am compiling a SCRAPBOOK of FIELD DAY experiences
: that I want to save for my children/grandchildren.
: Even if I am not personally in the stories, I WANT to hear/read of them! Send
: me your stories, I am saving them on-file for times (future)!

Even though I haven't been actively on the air for some years, except for 2M, I always try to attend FD and do some operating. To me, it's the premier event of the ham radio calendar. Out here, it means a trip up to the mile-high-plus elevations in the local mountains for a couple of days, out of the heat and smog in the valley.

Interest in the event in our group seems to have dwindled. One of the OTs even suggested a couple of years ago that we give up, due to lack of participation. This year, though, it looks like we will have a pretty active group. There is a barbeque being planned for Saturday evening, and it sounds great already!

Here are a couple for your scrapbook:

FD was one of the first places my wife and I went when we were dating. She has been interested in getting a license for many years, and is now working on her Tech.

My favorite FD was probably 1968, operating from the home front in Flint, MI. I was home from college that summer, running 40M SSB for the W8ACW station. Conditions on 40 were so good that year, our own section was among the last that we worked. Early on in the contest, I heard a KH6 calling CQ. While operating, I was eating a sandwich and drinking a soda. When the KH6 finished calling, I keyed the mike to call him, and what came out was "burrrrrrrp!" His reply: "QRZ, the station belching?"

Good luck with your story-collecting,

Jim

Frankly, where the cars are made does not really have anything to do with the fact that this started out as a discussion of the quality of Rat Shack products. Most every RS product is made if Korea and the quality is still lacking. What RS needs to do is have a U.S. company (ies) manufacture their products so that we can have something of quality.

The reason they build the stuff there is that the Koreans can make it so cheap. We all know that if you cut corners, you save money and this means higher mark-ups for the Shack. Profit if great, bu excessive profit is ripping off the consumer. If everybody could get the chance to go through a Rat Shack price book to look at their cost and retail I think you would be shocked at the mark-ups. I remember when we paid $.15 for a part that was sold for $1.00. Speakers that cost us around $25.00 were sold for $100. Then they would advertise the speakers at $50 and people thought they were getting such a fantastic price...little did they know that the sale price was the closest thing to a fair price in the first place.

All I want to see is quality and fair prices from the Shack. Today you get neither.

Regards,

Duffy

This is the most rational thread I've seen recently, and I've waded through a ton of garbage, both in the rec.radio.amateur.* hierarchy, and on a mailing list. Well said! Too many people have had everything handed to them throughout life, and would seek to have the requirements lowered rather than stepping up to the stndard.

The TV and printed media have no care for facts if they get in the way
of a story which supports their preconceived and generally incorrect
perceptions. It doesn't matter if it concerns internet, guns, amateur radio,
or anything else which might show a conspiracy of the "right". If they
can't find something to support what they believe, they will make it up
and then quote each other on what they made up.

>(snip)
>I have NOT been able to locate, so far, what I consider to be a decent,
>affordable 6-meter sideband radio.
>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>
If you want SSB and if you have a HF transceiver, you might consider the Down East Microwave transverter for six meters. I use one with my TS-850S and am very pleased with it. It gets you on six for about $295, and the nice thing is it preserves all the bells and whistles of the main rig. It puts out about 15 watts with only a few milliwatts of input. I use it to drive a 170 watt TE Systems amp when needed.

While it does transvert all modes, it's frequency response falls off pretty rapidly above 50.5 MHz, so it's not very useful for wideband FM. It could possibly be retuned, but I haven't tried.

It comes in kit form with the main PCB already wired. Assembly consists of mounting the board and output module and wiring them together. Should take about an hour or so. Also, the box it comes in is just plain cast aluminum, so you might want to paint it before putting it together, keeping paint off the heatsink and mating surfaces, of course.

I don't know what your technical level is, but this is probably not a good project for a beginner unless he has an elmer close by to help with antenna relays, drive levels, etc. Nothing really difficult, but it does require some attention to detail, and an oscilloscope would be handy, too.

Hope to see you on six!

73, Bill W7LZP

2412. Amateur Radio "Instructional Videos"

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-05 00:00:00 UTC
From: n4da@mindspring.com
Message-ID: <n4da.234.00606721@mindspring.com>
Source record: 247104

Hello allow me to introduce myself. I am Milton Lord the "Radio Doctor". I can assist amateurs with their technical problems through the use of my instructional videos and 22 years of experience in repairing RF communications equipment.

I have owned and operated a business called HAM REPAIR CO. for over 10 years. With my experience both repairing amateur radio equipment and instructing amateurs I have compiled 25 amateur radio instructional videos.

These instructional videos are designed to give you a better understanding of the technical aspects of your amateur radio equipment.

Whether your desire is a better understanding of packet or the IF alignment of a Yaesu 101 you can find the help you need in one of these instructional videos.

Recently the videos were evaluated by WB6NOA Gordon West and printed in 73 magazine. Mr. West had the following to say.....

.....And Lord knows what he's doing-you see every step in disassembling and reassembling printed circuit boards, and he gives you valuable hints on how to keep from accidentally ripping out solder traces, or inadvertently shorting something out when you accidentally lay the fold-out board down incorrectly.

After screening all of his videos, including a powerful set of tapes that describe how to tune up a kilowatt amplifier, how to pull packet RX out of most mobile 2 meter transceivers, and why the proper ALC settings are important to good linearity, I was convinced we really have someone sincere about producing good videos for getting things done, as opposed to simply a lot of videos to turn a quick buck. He works on these rigs on a daily basis and you can tell it by watching his techniques.

"HAM REPAIR CO."
Kennesaw, Ga.
(404) 422-1415

Specializing in the repair of assorted Ham Radio Equipment.

I would like to invite you to visit my web page where extensive information may be obtained about each video and other services my company provides at the following address...

The following from Gerald Schmitt has tobe the most ludicrous,
inept, laughable comment I have seen yet in this whole dicussion.
Dream on George. If this was CB, such fantasies might be entertained.

Amateurs are supposed to be a cut above this kind of vindictive
wish-evil-on-your-opponent kind of daydreaming!

GS>You never heard the ARRL threatening people with
GS>nonsense "Felony Affidavits" either. K1MAN is a bully
GS>who has run into some other bullies and the real losers
GS>are going to be the the rest of us.

GS>If the FCC wants to do something constructive they can
GS>toss out the W5YI petition and pull K1MAN's ticket.

GS>Then when he transmits, as I am confident he would, everybody
GS>could file a Felony Affidavit of him.

2415. Prices in magazine ads

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-05 00:00:00 UTC
From: edh@hpuerca.atl.hp.com
Message-ID: <edh.799676392@hpuerca>
Source record: 247107

While I share the frustrations of the previous posters concerning ads that do not print prices, I certainly wouldn't condemn QST because they allow the practice! Try looking in computer magazines to compare prices: you'll see the same pattern.

Also, in defense of the stores that do this: these magazine ads have to be placed a _very_ long time before they run. Often the items listed are from manufacturers promotions and/or special purchases that have not been completed at the time the ad is submitted. And in any case, in a volatile market (like amateur radio, like computers/componants) stores must react in monthly (sometimes weekly) price changes.

The best advice IMHO is to buy from a local store if you can (the price will _probably_ be competitive, and you should have a vested interest in keeping the local guy in business). Buying locally gives you a nearby place for service and consulting and is worth a _lot_ to you over the years.

In some case, what you want must be ordered because it is not available locally or the local dealer wants to sell a particular item too dearly (he probably got the stock through normal channels where someone else has bought at a deep promotional discount). In that case, use the ads as a guide to see who does carry the item you want. Pay no attention to the prices, even if it is listed. Call the top three or four stores you are impressed with. Ask what the current price is on the item, ask them to double-check to see if there is some promotional discount available (NO, there are NOT trying to cheat you, the regular price book probably does not list ALL the discounts, etc. and the item is only one of hundreds the sales guys must deal with, and the info you are seeking may be NEW). Now ask if the item is in stock for immediate shipment and how long it will take to get it to you and how much will shipping and handling cost. Are there other costs? And what is the return policy?

Now, if you are lucky, you have the info you need to make an intelligent decision (and that might be to go pay the local price!). And you are beginning to appreciate why the store did not advertise a price in QST.

Cheers & 73
Ed Humphries - N5RCK

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 05/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 05 MAY AND FORECAST FOR 06 MAY - 08 MAY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 73/9

GOES satellite data for 04 May
Daily Proton Fluence >1 MeV: 2.3E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 9.2E+08 (high)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
06 May 07 May 08 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 06 May: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 04 May
Learmonth 25 4345 4343
Fredericksburg 24 23
Planetary 38 32

Observed Kp for 04 May: 4663 3333
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
06 May 25 Active
07 May 20 Active
08 May 16 Active
COMMENT: IPS Geomagnetic Warning 13 was issued on 1 May and is
current for interval 4-7 May.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
05 May normal normal poor-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 May normal normal-fair poor
07 May normal normal-fair poor
08 May normal normal-fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
05 May 6 near predicted monthly values with strong spread F
during local night.

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
06 May 10 About 5% below predicted monthly values
07 May 10 Near predicted monthly values
08 May 15 Near predicted monthly values
COMMENT: IPS HF Communications Warning 17 was issued on 1 May and is
current for interval 4-6 May. MUFs at Townsville were near predicted
monthly values with spread F at night. MUFS at Hobart were about 15%
below predicted monthly values with spread F at night.

Date: 1995-05-05 00:00:00 UTC
From: rickvg@usa.net
Message-ID: <bzdglSEHGswM075yn@usa.net>
Source record: 247110

The two balloon flights scheduled for this weekend, EOSS-22 and EOSS-23, have been scrubbed due to anticipated bad weather.

At this time, we have not set a new launch date. When one is set, we will post it here on r.r.a.m and on the EOSS WWW home page.

Thanks to all of the distant stations for their offers of cooperation in this launch. We hope that you will be able to participate in our next launch.

and calling. A civilian distress frequency is worthless if no one monitors it. To ensure *everyone* would monitor ch. 16 it is designated a "calling and distress" channel. One monitors it for both incoming calls to your ship/boat and distresses. Calls from ship to ship or ship to shore are kept short - once contact is established the parties move to a working channel keeping 16 clear for other calls.

Please stop suggesting rec.radio.amateur.qrp - there's already a very
fine qrp email list with a high S/N ratio. Last count there were
400 subscribers. Now that doesn't sound like enough to warrant
a newsgroup, does it? In the past 3 years every time a suggestion
was made to shift from an email list to a newsgroup the suggestion
was always vehemently voted down.

If the low-profilers want a group, then why not start an email list?
Such lists are very very successful, for they target a select-interest
group and as a result the noise level is quite low (no flame wars).

With well over 7000 newsgroups some sites may have reached the saturation
point and choose not to subscribe to the new rec.radio.amateur.low-profile.

73 from Hawaii,
Jeff NH6IL

I did this (read the QRZ disk) on my Amiga a year and a half ago to create a
mailing list for all the hams in our local club area. I used GREP redirected
to a disk file to extract all the records with Livonia ZIP codes, then
loaded the records into SUPERBASE to reformat and print on address
labels.

There were a lot of post office returns. The FCC databases don't keep up
with people moving, or dying for that matter.

I could send the SUPERBASE templates if anyone is interested.

Yaesu 5100 is the best. I just love the option to receive on VHF (or UHF) with both the main and the sub band at the same time. That is, two VHF stations (repeaters,etc.) or two UHF stations, etc.

there are others, but Yaesu sold me.

The R-309A had several improvements over the R-390, the most importance of these was the upgrade from L-C type IF filters to mechanical filters.

Notes
=====

The distances were calculated using the International Ellipsoid of 1924 (polar radius 6356.912 km, equatorial radius 6378.388 km). Details of the calculation method are available on request.

Station positions were taken from the best available information, in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.

Calculated distances may change if better information on station location becomes available.

Due to lack of publicity the table has received few entries since 1988, but I am sure that many new records have been made. I have now taken over as records co-ordinator, and would like to bring the table up to date.

I would also like to extend the table to include the best five QSOs for each band and propagation mode, instead of just the top one as at present.

If you have any information on a possible record or exceptionally long distance QSO please send it to the IARU Region VHF/UHF/Microwave DX record co-ordinator:

John Morris, GM4ANB,
35 Main Street, Hillend, By Dunfermline, Fife, KY11 5ND, UK.

Or via packet: GM4ANB@GB7EDN.#77.GBR.EU
Or via e-mail: john@kirsta.demon.co.uk

The National Atomic Museum, at Kirtland AFB, in Albuquerque, NM will be host to Amateur Radio Special Events Station, K5QQ. This Station will operate August 5 & 6, 1995 during the hours of 0900 - 1800 MDT, in the general phone sections of 15, 20 & 40 meters, both days. The Station will be a small part of a massive celebration of V - J Day, and the 50th anniversary of that event. Also, the 509th Bomber Group (The US Army Air Corps) will hold their reunion, August 5 - 11, 1995. Some of the original Members of this unit will be present at the Museum. A special QSL will be issued. A SASE would be appreciated. All SWL reports are encouraged (don't forget the SASE). For those of You (licensed) who plan to be in the area, check in on the 147.15 MHz repeater (no pl, +600 KHz). The HF station will be set up in the NW corner of the B-29 display, just south of the museum. If You wish to obtain a special QSL card, send a SASE (#9 is fine), Your' QSL or SWL report to PO Box 6552, Albuquerque, NM 87197-6552. If You have any specific questions about the National Atomic Museum, and the V-J celebration, you may contact the museum directly, by calling 505-845-6670, daily, except Holidays, 0900 - 1700 Mountain Time (1500 UT - 2300 UT). If You have any questions about the Special Events Station, You can email me direct.

Ne> causing and doing "hate" radio.
Ne> Len, KB7LPW (host of the Ham Radio & More Show)

And the really sad part is that regardless of how eloquently you explained
the difference, the story got told in the original light with the original
'facts', AND you would be quoted out of context.

I really think if people would think about the times they have been
PERSONALLY involved in a news story and how far off the mark the
reporting was, then the NEWS so many people take as gospel would
be seen in its' true light, ENTERTAINENT.

Let the flaming begin!!!!!!!!!

Hogwash!!!! I publish a trade journal (Personal Engineering), and we accept new ad materials until one day before we actually go on press, and we mail a week after that. In fact, a large percentage of our ads each month (maybe 1/3) are new materials. The fact that a company doesn't submit a new ad is because they're too cheap to have the materials prepared. I suspect they don't want to make comparison shopping too easy for us. Their incentive is to get you to call and either use good sales tactics to keep you or hope that you're too lazy to do much more comparision shopping over the phone.

[925]

Newsline report number 925 for release on Friday, May 5th, 1995 to follow.

The following is a QST

Dayton

While Hamvention '95 is fast becoming history, as usual it's one for the record books. While official figures are not yet in, its believed that attendance this year may have topped 40,000. There were crowds everywhere and few were complaining.

The 1995 Dayton HamVention is now history. HamVention opened on Friday to sunny skies. Something HamVention attendees have not seen in recent years.
As usual there were thousands of amateurs milling about the indoor exhibits, as well as out in the flea market. There was an abundance of forums on many subjects including AMSAT, packet radio, electrical safety demonstrations, and FCC forums, to name just a few.
Hourly and major prizes were abundant donated by just about every amateur manufacturer imaginable. The Gala Banquet Saturday evening highlighted by the presentations of the coveted Amateur of the Year, Special Achievement and Technical Excellence Awards.
Even though Sunday dawned with that nasty four letter word, RAIN. Just about everyone had a good word or two to say about this years Dayton HamVention.

"Thee one supermarket which demonstrates the wide variety of modes and wide variety of interests that make up this hobby."

"HamVention and I both started out in 1952. I don't care what the weather is, I'm not moving my birthday back three weeks."

"Otherwise the weekend was very productive for me."

"The exhibitors in this years HamVention were so great I never even got the chance to make it out to the flea market."

"The items that were there seemed to be of a little better quality than some of the years in the past."

"I can't believe it is HamVention Weekend and it is still dry!"

"Not enough time in the in the weekend."

"My gosh, I over indulged."

"I never thought I would be happy to have a sunburn!"

Some HamVention history also pasted with the conclusion of this years Dayton HamVention. As next years HamVention will be moved to the third weekend in May, instead of the traditional last weekend in April.

And this additional note. The Amateur Radio Industry Group held its first meeting of 1995 in Dayton the evening before the Hamvention opened. That story and more next week.

(*****
EXECUTIVE COMMITTEE MEETING'S HIGHLIGHTS

The ARRL has released a report on its recent Executive Committee meeting in Evansville, Indiana. Here are the highlights of the conference.

Lack of FCC activity on rules enforcement was discussed, as well as Commission plans to close some field offices and to automate its monitoring stations.
Next, the 2400 MHz spectrum reallocation proceeding was reviewed, as well as ARRL's comments filed in response to the Second Notice of Proposed Rule Making in ET Docket 94-32. The League's position is that the relative status of the Amateur Radio Service and Part 15 devices at 2390 to 2400 MHz and 2400 to 2450 MHz is already well established, and no additional rules are required.
An ARRL petition authorized at the January 1995 board meeting regarding spread spectrum emissions continues to be postponed because of concerns that the draft petition still is not satisfactory to all affected parties. Also a study of the potential threats to amateur spectrum from Intelligent Transportation Systems has been commissioned. Spectrum requirements for ITS are not yet well defined, but may have significant implications for existing services.
The implications of an FCC notice of proposed rule making, designated as ET Docket 95-19, and concerning deregulation of

equipment authorization requirements for digital devices, was reviewed. Several at the meeting expressed concerns about the rising tide of RF noise and susceptibility of digital devices. Others voiced their opposition to any relaxation of existing requirements that might lead to even more problems.
On the other hand, it was noted that while the proceeding is styled as deregulatory by the FCC, proposed new requirements for the accreditation of testing laboratories and for the testing of central processing unit boards, power supplies, and enclosures are constructive steps to address shortcomings in the existing requirements.
A report was heard on the ARRL's legislative agenda for the 104th Congress. So far no bills have been introduced owing to potential sponsors' preoccupation with the business of the first 100 days.
Issues likely to come up in September at the IARU Region 2 conference in Niagara Falls, Ontario, include regional dues, methods of liaison between member societies and the IARU, and a 7 MHz band plan.
The EC heard a progress report on an international Amateur Radio permit, and one may be available to amateurs in the Americas by the end of the year, according to International Affairs Vice President Larry Price, W4RA.
Reports were heard on the various board committees now organizing in connection with the ARRL Long Range Strategic Plan. Also discussed were the "rover rule" for VHF contests; a more efficient telephone system for ARRL Headquarters to be installed soon; selection of a new main computer system for the HQ; plans for the 1996 ARRL national convention; the affiliation of 37 new ARRL affiliated clubs and dates 17 ARRL conventions were approved.

Look for more information on this meeting in an upcoming issue of QST magazine.

(*****
REPEATER COORDINATION MEETING DELAYED

The ARRL hosted repeater coordinators meeting is being rescheduled until later this year.
Only a week or so ago the leagues special committee on repeater coordination had chosen June 10th in Saint Louis, Missouri as the time and place for the long heralded event. Letters went in the mail to those who had requested invitations.
As we understand the sequence of events, the committee learned at the Dayton Hamvention that a number of key individuals and groups had scheduling conflicts that weekend. After a quick consultation the committee has decided to abandon its plans for a June meeting. We are told that it will probably now take place in the September to October time frame.

(*****
HF DIGITAL AUTO FORWARDING APPROVED

The FCC will amend its rules to permit limited automatic control of digital stations on the amateur HF bands. The action, in PR Docket 94-59, was announced in a press release. The automatically controlled station must either be connected to another station under manual control, or must transmit within a subband designated for this purpose. Those subbands have not yet been announced.
The Commission said it believes these rule changes will allow amateurs to ''contribute to communication technology'' and to advance amateurs' communication and technical skills.

(*****
FCC OK'S 219 MHZ BAND

On April 26, 1995, amateurs will gain secondary status access to 219 to 220 MHz. Amateur operation is limited to forwarding stations in point to point fixed digital message forwarding systems, including intercity packet backbone networks only.
All amateur stations are required to notify ARRL (in its FCC designated role as contact point) at least 30 days before operating in this band, and amateur stations within 80 km of an Automated Maritime Telecommunications Systems coast station must obtain written permission from the AMTS licensee before operating.
Amateur stations between 80 km and 640 km of an AMTS coast station must notify the AMTS licensee.
A Form 219A kit, available from ARRL Headquarters, includes a cover letter of explanation, a Form 219A for the required notification to ARRL, one is required for each transmitter planned) and a copy of the 219 to 220 MHz band plan.

(*****
YOUNG HACKER

Several San Francisco newspapers have reported on a high school student who received a certificate of merit for helping teachers with computer problems who has now been charged as a computer criminal.
The 16 year old High School junior, whose name has not been released, has pleaded innocent to using his home computer to alter school data. He is charged with eight felony counts of computer crimes.
According to a school district report, employees noticed last April that someone was using fake passwords to download student files. The student was arrested in September after a police search of his home.
The teenager has admitted to the San Francisco Chronicle that he changed school records to show he made a "C" in biology instead of a "D." He says however that the charges do not address that infraction, which he insists was his only one.

(*****
SPECIAL OLYMPICS

Thanks to the efforts of Paul Curtis, N1LNA, of Greenwich, Connecticut, anyone with Internet access to the World Wide Web can check out the information, announcements and news updates regarding Amateur Radio communication support for the games. Also, a Ham Radio Special Olympics Mailing List has been created to carry announcements, discussion and questions related directly to Amateur Radio operators' participation in the 1995 Special Olympics World Summer Games. Although it's mainly useful for hams who expect to assist by providing communication support onsite at the Games, anyone with a serious interest, suggestions or questions may be posted to this list.
The 1995 Special Olympics World Summer Games in New Haven, Connecticut from July 1st to the 9th.

(*****
SUPERHIGHWAY ROADBLOCK

A communications reform bill that recently cleared the Senate Commerce Committee was considerably less deregulatory than Sen. Larry Pressler had promised. Several Los Angeles area papers reported that the bill retains FCC broadcast ownership ceilings of 12 TV stations but the amended portion would extend ownership reach to 35% of U.S. homes from current level of 25%.
The proposal keeps FCC limits on foreign ownership to no more than 25% of U.S. broadcast properties, but nixes a similar rule for foreign investment in U.S. telephone companies. It also extends the license term of radio and television stations. Finally, the measure does allow telephone companies to immediately enter the cable TV business, and vice versa. Cable rate regulations remain in effect until telephone companies are in the position to offer video delivery competition.

(*****
CELLSAT

Call it Cellsat for short. That's not its real name but it is a new satellite in orbit designed to provide continuous service for
cellular phone users. Its owner, American Mobile Satellite Corporation says that the new bird is dedicated exclusively to mobile telephone, radio, fax, paging and data communications. American Mobile says right now America's 20 million cellular phone subscribers can't use their phones in more than a third of the country. That's because there's not enough relay stations on the ground. But the new bird fixes this for those who go beyond a conventional systems coverage area. With the new bird, cellular phone users will have their calls routed automatically to the satellite which should begin commercial operations by fall.

(*****
ASUSAT-1

A group of Austrian graduate and undergraduate student are hoping to put 10 pound satellite in a low earth orbit but the team is having problems locating reliable transmitters and receivers. Specifically needed are a space worthy 435 MHz transmitters with receivers for 435 Mhz and 145 MHz equipped with 9600 baud FSK modems. If you can help, contact the Austrian group on the internet to riker@asu.edu.

(*****
POSSIBLE FJL RADIO SHUTDOWN.

Ed Kritsky, NT2X, reports he had a conversation with Slava, RX1OX/FJL, operating from Franz Joseph Land. Ed says that he was told that a possible shutdown of the polar base may happen due to budget constraints.
The base closure could take place within the next several months, and if it does, then all personnel will be removed to the mainland. This would mean that FJL will no longer be represented on the air.
Currently active from Franz Joseph Land are R1FJL and RX1OX.
He was last heard on March 4th, on 14.237 MHz at 0123 UTC.

(*****
NACEC

Ed Addy says that The North American Center For Emergency Communications, Inc. which is a non-profit public service organization has just put up its first World Wide Web homepage area. The system is being developed to provide military family communications with deployed military personnel when normal phone service is not available and logistical emergency radio communications support to those non-profit organizations who are serving the immediate needs of disaster victims and survivors throughout North America.

(*****
DX

In DX, XV7SW in Vietnam reports a break in his normally busy work schedule and expects to be able to spend more time on the air. Unfortunately he is only authorized to operate on certain frequencies. Listen for him on 3.505 MHz. He has applied for permission to operate on 1.827 and 7.012 MHz, but at airtime no word on approval for expanded operation.

(*****
ARRL OPEN HOUSE

The annual ARRL Headquarters Open House is Sunday, June 4th, from 10 AM to 3 PM. This is the same day as the Newington Amateur Radio League's flea market which runs from 9 AM to 1 PM local

eastern daylight savings time.

(*****
CB PACKET

And finally, announcements from CB operators in Australia
are showing up on ham radio packet bulletin board world wide. One
Australian group, BG3 CB Club has gotten a message going around
that turned up in Germany. It calls for CBers of Philippine
nationality to tune their CB radios to channel 26 and have a DX
chat.
The problem is that nobody in Australia seems to know how these
postings are getting onto packet. Once the audit trails get back
to a specific city it ends abruptly. Some think the original
posting may be to the world wide web with autoforwarding putting
them onto the ham radio packet networks. Unfortunately the dead
end trails make this theory impossible to confirm.
Australian telecommunications authorities are believed to be
looking into the problem but their investigation could take a long
time. For the near future a least, you can expect to see more
foreign CB oriented messages flash by your PBBS and your own
packet screen.

Geoff,

I am a relatively new ham as you can tell by my call and this dispute has had a negative impact on my enthusiasm and attitude towards ham radio.

From following the posts on packet and Internet I deduce that K1MAN has set himself up as some kind of alternative W1AW. One of the frequencies he has chosen to employ is used by a number of hams in Georgia. This is at the heart of the dispute.

It has been alleged that people using K1MAN's frequencies when he wanted to use them have been threatened with "Felony Affidavits". A friend of mine in the U.S. Attorney's office tells me these are simply forms that are used to charge that a crime has been committed. Unless a U.S. Attorney takes action on them they are nothing. None the less, because of people's fear of the legal system they were for some time an effective terrorist technique.

It has been further alleged by another poster that K1MAN gave the Georgia RACES net two hours to get off "his" frequency of face these affidavits. This was during a period of serious flooding in the south Georgia area. I was in the area at the time and assure you it was a real emergency.

Next into the fray came W5YI of VEC and test preparation fame. He has filed a proposed rule change that would prohibit bulletins on frequencies below 30 mHz. This would have the effect of shutting down W1AW activities including code practice. Since W1AW sells code tapes and computer programs his motives have been questioned.

The debate now centers around the proposed rule change. Personally I feel that both sides display more ego than good sense and the average ham is the real victim.

In my posts I have taken issue with both sides but have received more hate posts and mail for disagreeing with K1MAN I take this to indicate his position is weaker. In my humble opinion the best this for the majority of hams would be if K1MAN backed off or removed from the air without a rule change. To silence him at the expense of W1AW would be a loss to all hams.

With the obvious exception of the last paragraph I have tried to be factual and informative. I hope this helps. 73 de Jerry

To answer Duane's question --

I had bad experiences with two Azden rigs. They seemed to be
programmed as to frequency range, step size, etc, by a diode matrix. Both of
the rigs I had, several years apart, had cold solder joints on the diode
matrix and worked really flakey. Sometimes good, sometimes not worth a
flip. I even called one of them a "slap it" radio, because I usually had
to slap it to make it work.

******* Sorry for the Resend...********
******* New FTP Information! ********

CountyCAT v1.31 Released

CountyCAT is a small, easy to use database to aid county hunters in their quest for the CQ County hunters award. It will track your progress and help you with the messy paperwork that plagues all ham radio awards. CountyCAT is not a logging program, there are many good loggers on the market. It is a database designed to work alongside your favorite logger.

CountyCAT was written as a supplement to the logging program "Log-EQF" by Tom Dandrea, although it can supplement any logging program that allows you to shell to DOS, or another program. I wanted a program to help me with county hunting, but I didn't want to switch to a new logging system. I wrote CountyCAT so that I could shell from "Log-EQF" to check on a county then get back to logging. I think CountyCAT fills this need.

CountyCAT features:

* Database for County hunters going for their "First Time Around" award.

* Prints a state by state summary of worked vs unworked counties. Helpful for quickly tracking progress toward the different levels of county hunting awards.

* Will print a detailed report to printer or to text file. Suitable for submission for CQ County hunters award. (Registered users only)

CountyCAT is available for download from:
IBM-Net 1-317-882-5575
First time callers can download after callback verify.

CountyCAT is also available for anonymous FTP transfer from:
oak.oakland.edu
It is in the SimTel/msdos/hamradio directory.
Look for ccats131.zip

This thing about "ICs aren't really components" is ridiculous, Jeff.
It undermines the credibility you do have. Sure, I don't count plugging
ICs into sockets as homebrewing, but wiring sockets pins together
in a way that makes a working system is as much homebrewing as wiring
transistors and passive components together. Add in the job of writing
embedded firmware, and homebrewing add another dimension. All the
way from winding coils on toilet paper rolls to writing a real-time
executive, homebrewing is eclectic. To come in from right field with
a "ICs don't count attitude" is simply cutting yourself off from
the amazing set of technology available today to the experimenter.

>> I don't want HF privs. Let's face it, theres only 7MHz od bandwidth

I work FM simple over distances much larger than 10 miles regularly,
and I live in Southern California which is broken up by tall
mountains. Now, if I go to the top of a mountain, 100 miles is
no big deal.

The "ICs aren't homebrewing" chant is simply wrong, and it lacks
the kind of respect one homebrewer ought to give to another.

Brian,

I am confused are you contending that K1MAN never threatened
felony affidavits? I remember clearly when it happened.

Did Glen never give an ARES net two hours to get off his
frequency? During an emergency as I understand it.

Use of bogus legal threats is bullying if not outright
terrorism. People fear the legal system Glen made it sound like
he was going to put folk in jail.

My hope that the FCC throws out W5YI's petition and pulls
Glen ticket is what I believe would be in the best interests
of Amateur Radio. It is painfully obvious that neither side
in the debate gives a tinker's damn about what is good for

the majority. It is a monumental battle of monumental egos
and the collateral damage is not even in the equation.

As to some one filing a felony affidavit on Glen, that
strikes me as laughably ironic if not down right poetic.
What is sauce for the goose is sauce for the gander.

By the way Brian, who is George? That bit confused me also.

73 de Jerry

2449. Extra Class Code

I got my advanced License 10+ years ago
and even then 13wpm was a struggle.

I am now attempting to start allover with code and
pass the Extra class exam.

Any suggestions on how best to do this.
Good programs (I have Super morse)?
Good Tapes?
Tips /Techniques?
Is 5min three times a day better than 15Min once a day etc....?
I've been working on it for three weeks and I am almost
back to the point where I could pass the 13wpm test again.

Thanks for any advice you may have.

Here's my tip: Set your code program (supermorse will work) at 25wpm spacing,
20 wpm send. Work with random code groups for 5 minutes, then work with a
practice test for 5 minutes. Do this as often as you can each day.

I've always heard about how great Motorola Radios are, and I've used several of their HTs at my
volunteer rescue squad. I was wondering where I might find out more information about their product
line, and what's involved in terms of buying a Motorola Radio (either mobile or HT) and modifying
it for amateur use. What I'd really like to do would be to get an HT, use two of the channels for
the rescue squad (in the 440 area) and use the rest of the channels for amatuer repeaters (with a split
and PL). Is this idea realistic, practical, possible? What are the costs, and who would I take the
radio to to have it modified? Would I be able to do the work myself?

All replies are appreciated. TIA.

SUBJECT:- IOTA EU-006, INISHMAN.

Following Our Successful Trip Last May To The Isle Of Skye
(GB0SKY),
We Are Pleased To Announce Our Next Trip For IOTA.
From 13th MAY - 19th MAY 1995 We Will Be Active From The Island
Of INISHMAN,
Part Of The ARAN IS. Off The West Coast Of Ireland.
The IOTA Reference Number Is EU-006.
We Will Be Signing EJ/Home Call.
The operators are G0OYQ Steve, G0PHN Maurice AND G0ULN Lee.
We Will Be Active On All H.F. Band's 160-10M, On The Usual IOTA
Frequencies.
Using the YAESU IOTA Portable Station, On Loan From IOTA
Committee.
The QSL Information Is Via The Buro To G0OYQ Or Direct To :-
CHB ARG. PO BOX 803, HULL, HU7 4BY, ENGLAND.

If You Require Any More Information I Can Be Contacted At The
Following:-
PKT:- G0OYQ @GB7HUL.#15.GBR.EU
Or Via GB7YDX DX-CLUSTER NETWORK
CIS:- 100416,2344
INTERNET:- 100416,2344@COMPUSERVE.COM

Where did the newtman get the tube he used as a prop? Does he have any
idea about the power/current characteristics of ckt components? Not
likely! This new god of nothink is running a game on a citizenry that
refuses to think about or grasp technical realities. The newtwit
probably read the word "tube" or an aid did then ran for a prop to
flimflam the average street dork. After reading the posts of folks
that suposedly have some tech savvy I'm disgusted. A bunch of truth
might get NEWTERED is this "A" hole is allowed to get away with his
crap. These are the same people that will pass telecommunications law
etc. These are the same "patriots" that never served a day and will
give away HAM spectrum to the sainted 'private sector' ie: the
McDonalds Drive through. If that tube was a VR150 , did it come
from the FAA? Ask the reigning God about TWT's, beam pwr pentodes,
or the Eb/no of a link and see what the phoney butt has to say.

2454. R390/R390A Difference ?

>Shade

It's not quite as easy as hooking a code key up to the mike input, but it is
possible. What you need to do is get (or make) some kind of oscillator that
will produce a tone when the code key is pressed. By feeding this tone into
the mike input, you now have a CW FM rig.

But that is a jointy owned plant of Mitsubishi, (means 3 diamonds), and
Chrysler, (the corporate logo is the penta-star). The majority of parts
are still made in Japan, but assembled here to save on import taxes.

Unless the government has changed things, there is no customs duty on
component parts that are to be assembled in the US, but a significant one
on preassembled products, like cars.

2458. Exercise RESPONSE-95, Msg 3001

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-06 00:00:00 UTC
From: "Disaster Emerg. Response Assn" <disasters@delphi.com>
Message-ID: <R2+c6tT.disasters@delphi.com>
Source record: 247150

MESSAGE ID: 3001
ROUTINE

1. This is the first message in a series of 10 daily updates regarding DERA's participation in the FEMA-sponsored RESPONSE 95 Disaster Exercise.

a. We will not flood you with email you don't want.

b. If you want to receive our daily updates, you need do nothing.

c. If you DO NOT WANT these updates, send a reply message to us at DISASTERS@DELPHI.COM, Subject: Stop R-95 Mail. We'll take you off our exercise distribution list.

d. To add someone else to our address list, send a message to DISASTERS@DELPHI.COM, Subject: Start R-95 Mail. In the first line of the message text, give the new recipient's full Internet EMail address.

2. Future messages will be in teletype format, with line references as follows:

Message Number (Start sequentially with 3001)
Precedence (Routine, Priority, Immediate, Flash)
Date Time Group at Originating Station
Action Address
Info Address
Break (BT)
Situation Update: Real World
Scenario Update: Real World explanation of what's going on
Exercise Siuation Report (SITREP): Simulations, etc.
Comments as needed
Break (BT)
End of File (EOF)
End of Message Signal (NNNN)
Cut Bar (----------Cut Here----------)

3. When possible, we will translate our teletype traffic into upper and lower case, but please do not be offended if some traffic comes through in all CAPS... shouting isn't intended... particularly if it's a direct feed through the INMARSAT-C TELEX server-translator which we're testing.

4. The DERA scenario begins at 1200 (noon) Eastern Time on Friday 5 May 95. For much of the exercise, we will follow the FEMA-State of Louisiana scenario, but we've accellerated some actions so that our deployed team members can experience a full traffic load throughout the exercise, which would not be possible with the basic scenario.

5. Initial Actions.

a. (DERA scenario timing, accellerated from the FEMA and Louisiana state scenario) At 1600Z 5 May 95, DERA is notified of widespread communications diruption along the Gulf Coast due to tropical storm damage. Support teams are notified, the DERA Emergency Operations Center (EOC) is activated, and an all station alert is issued. At 1900Z 5 May, one of the organizations with which DERA has a support agreement calls for mutual aid. A CERT (Communications Emergency Response Team) is readied for deployment by DERA's Director of Operations, John Rice (N9SMR).

b. A DERA CERT under the leadership of Dan Ritchie (K9BAL/AFA3TA) will depart West Bend, Wisconsin at 1900L with destination of New Orleans.

a. Dan and crew will provide communications from the NDMS (National Disaster Medical System) aeromedical staging facility at NAS Orleans 6-8 May 95.

b. On 9-10 May, Dan's team will redeploy to Baton Rouge, LA, and provide communciations from the State Emergency Operations Center.

c. On 11-12 May, they will operate from the Air Force Reserve facility at New Orleans in support of Air Force humanitarian airlift, augmenting military contingency communciations teams.

d. The team will redeploy home 13 May 95.

6. (Real World). The DERA operation in Baton Rouge will be open to the public, and our mobile unit we will be located outside the State Emergency Operations Center. Street directions and operating hours in the 8 May status message.

7. (Real World). The DERA communications architecture will be:

Operational Hub: DERA EOC at General Mitchell International Airport, Milwaukee, Wisconsin. Phone (414) 482-5243.
ATS-3 Callsign: DERA MILWAUKEE
AT&T HF Callsign: DERA MILWAUKEE
Amateur Callsign: N9SMR and N3DAK
Internet Address: DISASTERS@DELPHI.COM
Amateur Packet: N3DAK@WA9KEC.WI.USA.NOAM
USAF MARS Packet: AFA3BJ@AGA3BM
AT&T Easylink: +62918703 User: Disasters Attn: EOC
PSTN FAX: [Unlisted Number]

Backup Hub: DERA Backup EOC will be in Vancouver, WA
ATS-3 Callsign: DERA VANCOUVER
AT&T HF Direct Callsign: DERA RESCUE 621
Amateur Callsign: WA6TUV
Amateur Packet: WA6TUV@W0RLI.OR.USA.NOAM
EMail Address: 74771.3430@compuserve.com
AT&T Easylink: +62918703 User: Disasters Attn: ALT-EOC
PSTN FAX: [Unlisted Number]

INMARSAT-A Link: Two portable voice and two portable fax terminals

INMARSAT-C Link: Two portable data terminals

INMARSAT-M Link: One portable voice/fax terminal

AT&T HF Direct: One portable voice SSB transceiver and SITOR receiver
Callsign: DERA GLOBAL RESPONDER, WCQ7361
SelCall: 13973
Access Via 1-800-732-2255

ATS-3 Satellite: One portable voice transceiver
Callsign: DERA NEW ORLEANS, KE2XOL-1 or
DERA BATON ROUGE, KE2XOL-2

QTRACS Satellite: One Ku-Band portable data unit (Qualcomm Omnitracs)
System Address: MCT9101

Amateur HF: 75-40-20 Meters as appropriate
SSB and Packet
Callsign: K9BAL

Amateur VHF: As determined by local ARES/Emergency Coordinator
in Baton Rouge and New Orleans. Also, will access
the NASA backbone data system through the Stennis
Space Center (SSC) amateur packet node. SSC is
making special arrangements for path feeds from
New Orleans and Baton Rouge for the exercise.

EasyLink: Address: +62918703 User:Disasters Attn:Baton Rouge

Internet: Three laptops linking through local hosts and/or
Cylink/AirLink 800 MHz portable T-1's located at
surviving Internet nodes. Accounts via AOL, UWM, Delphi.

IRC Channel: RESPONSE-95 (Public) Intermittent
DCOM-95 (Private)

INTERNET NEWSGROUP: ALT.DISASTERS.MISC

8. We have greatly scaled down the extent of our response over the past
few weeks, and apoligize to the DERA members who had hoped to be tasked
in support of this exercise. We'll still call on you if we can find an
appropriate tasking.

a. Because of our need to support the FEMA and State scenario,
we're providing our clients with minimum-essential service, rather than
the full contingency support we know you're capable of. One of the aims
of our client organizations is to operate with constrained communications,
and we need to let them drill under those constraints, while still
maintaining our own skill at all-out support.

b. In November 95, DERA will sponsor an exercise aimed at challenging
our member's skill and technical resources. More in the October 95
DisasterCom Newsletter.

9. The next message we send you will be the electronic edition of the
DisasterCom Newsletter. You may have already received the paper edition

or electronic distribution through our listserver, Mediccom, but we wanted to make absolutely sure everyone was starting the exercise with the same background material.

a. We will continue sending you new editions of this quarterly newsletter unless you instruct us not to. To stop the newsletter, send a message to DISASTERS@DELPHI.COM, with Subject: Stop Newsletter.

b. To continue receiving the newsletter, do nothing.

DERA was founded in 1962 and is affiliated with major emergency management associations and the American Radio Relay League. DERA is a Nonprofit, IRS 501(c)(3) tax exempt international service organization and is incorporated in the State of Wisconsin. Membership is open to all who share our commitment to effective disaster preparedness and response.

2459. Exercise RESPONSE-95, Msg 3002

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-06 00:00:00 UTC
From: "Disaster Emerg. Response Assn" <disasters@delphi.com>
Message-ID: <Ra4+iPX.disasters@delphi.com>
Source record: 247151

Message 3002
Routine
060100Z May 95
To: ALLDERA
Info: DERA5.DIS
Subject: Exercise Response-95 Update #2
BT

1. Situation (Real World):

a. At 051900Z May 95, DERA Director of Operations initiated recall of one DERA deployment team. That team will be headed by Dan Ritchie, K9BAL, of West Bend Wisconsin.

b. Team began deployment at 052045Z May 95, with destination New Orleans, LA.

c. Initial staging base will be Naval Air Station New Orleans.

2. Scenario Update (Deviates from FEMA Script)

a. Exercise Situation: Widespread communications disruption along Gulf Coast due to storm damage. Other tropical storms are forming.

b. DERA's assistance was requested by several response organizations with whom we have mutual aid agreements.

3. Exercise Situation Report: None

4. Comments:

a. INMARSAT-C will not be deployed. Both units have been committed to real-world requirements. Gapfiller will be NASA ATS-3 Satellite System.

b. If this were an actual disaster, DERA Amateur Radio members in the exercise affected area would be requested to contact their local ARES Emergency Coordinator (EC) and integrate their capabilities into the local response effort. All DERA members are encouraged to maintain current ARES registration and actively participate in local drills.

c. DERA member Gordon McCraw, KA5YDJ, an ARES/SEC in Louisiana, will be providing exercise communications

for the Red Cross disaster headquarters at Union Hall
in Baton Rouge 9-10 May.

d. Event timing shown in Message 3001 remains unchanged.

e. Note concerning address listing:
"ALLDERA" means all DERA members and affiliated stations
"DERAx.DIS" is the current email list of other
interested parties, affected government agencies, and
other voluntary agencies active in disaster.

e. Futher distribution of exercise updates will be
done automatically courtesy of the listserv at mediccom.
Please notify us immediately of any ads or deletions
from our mail list. Send reply message to
DISASTERS@DELPHI.COM and specify (Start) or (Stop) R-95.

DisasterCom Newsletter - Electronic Edition - April 1995

Quarterly Newsletter of
The Disaster Emergency Response Association, Inc.
P.O. Box 37324
Milwaukee, WI 53237-0324

E-Mail: disasters@delphi.com

Membership in DERA is open to all who share our interest in well coordinated, reliable disaster response and effective mitigation efforts. Working together, DERA members are making a significant contribution to preparedness and response.

Annual dues are $15 US for private individuals. Please contact us for information about our services and benefits, or ask for a complimentary copy of our printed newsletter.

- May '95 Exercise -

The largest DERA exercise in over three years will be conducted in support of FEMA's Gulf States Hurricane Exercise in May. DERA teams from around the country will activate in various roles, while many members will support the exercise from their home locations. An important part of this exercise is an evaluation of new data transmission and information management systems, and many sites will be on the "receiving end."
John Rice, DERA's Operations Director, will be in charge overall. Lead planner is Benny Lane, who has been working directly with federal, local and volunteer officials for several months. Three DERA communications teams and one supply management team will deploy to New Orleans, and will initiate over 7,500 messages and supply data transactions over a 10 day period. Many of these messages will be routed over Amateur Radio, while some will go by a special Internet host system, and others by NASA ATS-3 satellite or via INMARSAT
"We'd planned to have exercise activities available for any DERA member who wished to participate, but so many members had volunteered by the middle of January, that we felt it best to

form the support teams early
and let them start working together with the new equipment and
operating protocols," said Lane. "In future exercises of this
type, we will definitely have a job for every member who volunteers."
During the exercise, members should check the UseNet News on
the Internet for updates and requests for assistance. The Newsgroup
is "ALT.DISASTERS.MISC" Look for the DERA Exercise discussion
thread.

KOBE

In the Mind's Eye
by
Sarah K. Nathe
and
Susan K. Tubbesing

As we walked through the rubble in Ashiya, a heavily damaged city
east of Kobe on the day after the earthquake, we encountered a
dazed American couple standing in front of their rented house.
The woman told us that she hadn't wanted to move to Japan when
her husband's company transferred him because there were lots
of earthquakes. Her husband's company had reassured them that
Kobe was "one of the safest places in Japan for earthquakes."
She gestured toward collapsed houses across the street and exclaimed,
"Look at this, and then

imagine what an earthquake can do to the places that aren't 'safe'!"
We are now back in the U.S. trying to imagine what the inevitable
earthquake will do to our own city. We were in Japan to attend
the 4th Japan/US workshop on Urban Earthquake Hazards. Never
has a meeting so changed the perspectives of those attending.
We all agree: After you've seen Kobe, you look at your own community
with changed eyes. You visualize more damage and disruption than
you ever did before.
Regardless of where you live, however, you should scrutinize
the images of Kobe to see what a "moderate" earthquake can do
to a supposedly "safe" place. [Kobe was defined as being in a
seismic"low risk" zone]. In this respect, Kobe is not unlike
numerous US cities--communities that think they're safe or low-risk,
regardless of historic or scientific evidence to the contrary;
communities that recognize their risk, but haven't the time or
the resources to prepare and train personnel; communities with
recent earthquakes but short memories that allow unwise development
in hazardous areas; communities in California, and plenty of communities
outside of California.
It seems clear we ought to move our
focus from the elusive "Big One" to the dire effects of the much
more likely "Pretty Big One" right under an urban area. Among
the first effects in Kobe were the disrupted municipal water system

and the fires--kindled either by reptured gas lines or overturned
kerosene heaters. There was no water for fighting the fires,
so they spread--especially through neighborhoods of woodframe
homes and the Natgata Ward....
Thousands of people were trapped in their collapsed houses.
Some crawled out, others were rescued by neighbors, and yet others
were not rescued before the fires swept through. In the first
few hours, most of the rescue efforts and much of the fire fighting
were done by untrained and poorly equipped neighbors and passersby.
Phone service was interrupted, so it was impossible to call for
help.
Fire trucks, medical help and search/rescue teams were slow
to arrive because the main traffic routes were collapsed, buckled,
blocked by debris and fallen utility poles, or quickly snarled
into unyielding jams. The gridlock did not decrease for days.
People from the 100,000+ destroyed or severely damaged buildings
and houses soon began seeking shelter in neighborhood elementary
schools, which had no water, sanitation facilities, food or medical
supplies. There were more than 300,000 people in shelters by
the second day. The most enduring images some of us have of Kobe
are of the shelters we saw, crowded with the living and the dead.
Throughout the city, there was no water for drinking and little
for sanitation. We saw lines of people with tea kettles, pots
and pans, and plastic pails waiting quietly at water sources--mostly
broken water mains or springs.
For each person who left a damaged building, there must have
been at least one who stayed, continuing to live in a structure
so manifestly unsound that it could collapse in an aftershock.
We went to Japan to learn from research and experience how
to reduce future earthquake losses. We have returned with countless
images of what the future holds if we fail.

Ms Nathe works for the California Office of Emergency Services,
and Ms Tubbesing is with the Earthquake Engineering Research Institute.
At the time of the earthquake , they and 40 other engineers and
emergency management officials were in Osaka, 30km East of Kobe
in a joint US/Japan earthquake hazards reduction conference.
Our thanks to the Natural Hazards Observer for allowing us to
reprint this report. A preliminary study on the earthquake is
available for $15.00 from the Earthquake Engineering Research
Institute, 499 14th St, Suite 320, Oakland CA 94612-1934. Phone
(510) 451-0905. Californians, add $1.35 sales tax, and for overseas
delivery, add $2.50.

_____ · _____

Member Profile:

Richard L. Stephens, Jr.

Whether fighting fires, developing chemical emergency procedures, working to contain a deadly chemical spill, coordinating resources for Chernobyl or acting as liaison to the U.N. on behalf of emergency management in developing countries, Richard Stephens' twenty-two years in emergency management have seen him effect improvements on the local, national and international levels. In fact, he was named "World Safety Person of the Year" in 1991 by the World Safety Organization (WSO).

Currently, as Director of the Office of International Programs for WSO and as Chief Executive Officer of Global Technical Resource Environmental Council, Stephens is making tangible progress in the global coordination of emergency management resources.

His widely published paper, "Emergency Response and Incident Control," was instrumental in the development of the UN Center for Urgent Environmental Assistance in Geneva, Switzerland. His 1991 publication, "Global Needs and Response Parameters to Industrial and Transportation Oil Spills," has been used in the development of Global Response Protocols.

Stephens' early career as a Montgomery County, Maryland firefighter included setting up one of the first Mobile Command centers in the area. In 1975, he was awarded the Medal of Valor for rescuing two civilians and two firefighters during a flash flood.

In 1984 Stephens became the first ex-firefighter hired by CHEMTREC. During his tenure as Emergency Coordinator and Supervisor of Operations, Stephens revamped CHEMTREC's emergency based communications training program to involve fire departments and communities in training operations. He promoted the use of Industrial Chemical Response Teams to augment local fire departments' chemical response capabilities.

As a CHEMTREC Supervisor and Senior Emergency Response Coordinator, Stephens handled numerous chemical emergencies nationally and abroad. Most notable was the 1984 chemical leak at Union Carbide in Bhopal, India, which killed thousands. In commemoration of the tenth anniversary of the Bhopal tragedy and of Stephen's continued remediation efforts there, India's Minister of the Environment presented Stephens' wife, Debbie, with a necklace made by the widows of Bhopal.

Stephens now lives in Elbert County, Colorado, where he serves on local and state levels as County Emergency Management Coordinator, as an officer with the fire protection district, and as a member of the Colorado Department of Health EMS Committee for the Training and Education of EMT-Paramedics. However, his view of emergency management is increasingly global in scope.

Teaching in developing countries, Stephens says, has been his most gratifying work: "I tie emergency management into the environmental programs I teach and into the country's economic development plans. An awareness of the necessity of emergency management and risk assessment needs to become a part of their thinking."

When asked how emergency management has impacted his family, Stephens says that each member of the family except the very youngest knows how to operate all the equipment safely on their farm, where

they raise horses and alfalfa. "The kids know how to shut off the farm equipment and how to drive the pick-up truck and tractors in emergencies. And they know how to call for help on the radio." With Rick Stephens working in emergency management, the WSO's motto of "Make Safety a Way of Life" is becoming a reality for more people throughout the world.

DISASTERS@DELPHI.COM. Most systems will prompt you for additional address characters to route your message off the local system and onto the Internet.

ELECTRONIC NEWSLETTER

The DisasterCom Newsletter is now available by automatic electronic distribution, thanks to Churton Budd of Toledo, Ohio. To get automatic distribution, send an E-Mail message to: listserv@medicom.norden1.com

Have the message body read:
"subscribe dera.list your_email_ name @your_ system."

NEWSLETTER AT AOL

Also, thanks to the new hosts of the Emergency Response Club at
America On Line (AOL), our newsletter is in the emergency management
library archives, under the ERC section. Access this section,
first, by clicking on the AOL icon that looks like a postage stamp
under a magnifying glass. Then select Emergency Response Club
and look for the library files.

NEWSGROUP

DERA posts messages of general interest to the newsgroup ALT.DISASTERS.MISC.
If you have access to the Internet and can reach "Usenet News"
(also called Net News), the newsgroup ALT.DISASTERS.MISC is an
excellent resource for late-breaking disaster and emergency news.
It's posted just like a bulletin board. You are free to read
what's there and post your own replies, or start a new topic,
or discussion "Thread."
DERA and members also post fast-breaking news, disaster needs
and resources, and other items of interest to this Newsgroup.

IRC CHANNEL

Internet Relay Chat (IRC) allows users around the world to converse
in real-time. During disaster operations, DERA forms an open
channel called DISASTERCOM to facilitate rapid support to the
scene. Often, on-scene situation reports, requests for assistance,
and offers of aid are coordinated over this IRC channel.

NI/USR Electronic Newsletter

The National Institute for Urban Search and Rescue newsletter
can be downloaded directly over modem by calling the FEMA SALEMDUG
BBS at 800-538-4408; California BBS at (805) 966-6318, or Telnet
to:
disaster.cprost.sfu.ca,(userid 'epix') You may also Gopher to:
disaster.cprost.sfu.ca 5555.
Internet service is provided to NI/USR by Simon Fraser University,
Vancouver, BC.

Future Developments

DERA will have a World Wide Web (WWW) server active soon. More
about this in the next issue.

Help for the Bewildered...

Do you feel overwhelmed (and maybe just plain left out) by all
the Internet talk? Two recent magazines may help.

Look for the March '95 issue of Popular Mechanics Magazine,
which contains a plain-language explanation of the Internet.
A more detailed, but very understandable Internet overview
is featured in the Spring '95 edition of PC Novice: Guide to Going
Online.
Society is changing rapidly because of advances in communications
and the ease of worldwide information exchange. These special
editions can show you how to understand or join this global movement.

DERA'S PHILOSOPHY AND OBJECTIVES

THE NEED

In every recent disaster, communications problems and logistics information management have been the limiting factors in effectiveness of the response effort. Victims depended upon relief organizations who in turn struggled with technical, communications and information management problems.

OUR INTENT

We will improve systems for disaster communications, logistics operations and information management by helping relief agencies design and obtain appropriate resources. Where necessary, we will develop and deploy our own systems.

OUR STYLE

We will work with utmost integrity and dedication in everything we do.
We will support progress, development and education at every level.
We will help those in need without regard to credit or personal gain.
We will use the good offices of our members to bridge organizational barriers and solve technical problems.
We will work together with all who share our vision of service

OUR ACTIVITIES

Disaster Team Deployments
Seminars, Conferences and Training
Quarterly Newsletter - Printed and Electronic Editions
Regional and National Exercises
Assistance to Business and Industry
Internet Services
International Satellite Network
Disaster Logistics Management
Emergency Communications
Global Airlift / Sealift Coordination
Systems Analysis and Contingency Planning
Damage Assessment
International Recovery Assistance
Exercise Planning and Evaluation
Research, Planning, and Publications

DERA is a Nonprofit Organization with IRS 501(c)(3) Tax Exempt Status
---

We invite you to join as a member. Membership dues for private individuals are only US $15 per year. Other nonprofit organizations, government entities, disadvantaged or start-up businesses dues are $25. Business membership is $100 per year. (Overseas, please add exchange rate and add US $10 to cover airmail postage. Canada and Mexico: Same as U.S.)
No-fee affiliations are available for those unable to make dues payment. Please contact us.

Here are some of the benefits of membership:

- Opportunities to Serve
- International Association
- DERA Newsletter and Publications
- Conferences, Seminars and Training
- Professional Affiliation
- Leadership Opportunities
- Worldwide Network of Contacts
- Preparedness Assistance for your own family or business
- Reliable, timely disaster information
- Community and International Service

Please join, or contact us for details:

Cathy,

I, too, would like to see more women join the amateur ranks.

In our club of about 850, there are a very small number of female hams. Maybe it can be related to other cultural biases that exist in our historically male-dominated culture.

You could also ask the question, "Where are all the female engineers?" or "Where are all the women dentists?"

I'd be interested to know what got you into amateur radio. Maybe if we understand what kinds of things attract women to ham radio we could encourage more women to become hams.

news.groups,rec.radio.amateur.antenna,rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.radio.amateur.equipment

How about rec.radio.amateur.covert? :-)

The point of the low-profile argument is that you don't want everyone knowing that you're an Amateur (whether it's because you're contravening apartment regulations, or to avoid drawing the attention of burglars etc.) Mind you, the "covert" also suggests clandestine third-world stations...

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 06/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 06 MAY AND FORECAST FOR 07 MAY - 09 MAY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 76/14

GOES satellite data for 05 May
Daily Proton Fluence >1 MeV: 1.4E+06
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 1.3E+09 (very high)
X-ray background: A3.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
07 May 08 May 09 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 07 May: 78/17

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 05 May
Learmonth 22 4355 3223
Fredericksburg 25 27
Planetary 23 39

Observed Kp for 05 May: 4566 5333
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
07 May 20 Active
08 May 18 Active
09 May 14 Unsettled to active
COMMENT: IPS Geomagnetic Warning 13 was issued on 1 May and is
current for interval 4-7 May.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
06 May normal fair-normal poor-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
07 May normal fair poor
08 May normal fair poor
09 May normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
06 May -7 about 15% below predicted monthly values

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
07 May 0 About 10% below predicted monthly values
08 May 10 About 5% below predicted monthly values
09 May 15 Near predicted monthly values
COMMENT: MUFs at Townsville were near predicted monthly values. MUFS
at Hobart were about 30% below predicted monthly values.

>administered to determine the proficiency of the candidate. However, as
>far as I am aware, there is nothing in any of these tests that require
>the individual to prove that they can indeed "walk".

This is an excellent analogy, Jim. Just as we must learn to walk before we can explore more fascinating modes of transportation, we should learn the code so as to easily get on the air with equipment we've built ourselves and in doing so gain invaluable construction skills that will lead us into building other modes of communication.

Oh, as long as CW is permitted from lower to upper band edge, on each band, the code should continue to be required to gain access to HF. For how else would you know what --.- .-. .-.. means?

73 and live better through Morse,
Jeff NH6IL

And you really don't encounter any trouble until you hit 10wpm;
at that point you stop hearing the individual dots and dashes
and instead begin to hear entire characters.

> CW is like Fred Flinstone it is old and outdated.

Speech communication is pretty old, too. But we still use it.
Outdated? Listen to HF. Out here I find that about 50% of the
HF comms are conducted via CW.

Many of the guys I qso with in the South Pacific only have CW.

> The Coast Guard no longer uses cw only ham radio.

I'm very impressed that so many folks keep making reference to the
service I used to belong to! But will the CG be the barometer
that dictates what modes we hams use? I hope not, for their
HF SSB traffic totals are down severely from previous years. I
doubt if anyone is prepared to lay down their mic so as to follow
the CG's lead.

> I would like to see 5 wpm for general and a toughter written exam.

That's easy to understand - you'd probably like to get on HF without
doing anything other than memorizing the Q&A pool. But remember, CW
is allowed on each band over the *entire* band. If you unknowingly key
you mic over a CW QSO and they ask you in code to QSY you'll be expected
to comply.

I think it would be to our and our community's benefit to affiliate ourselves either with ARES and/or RACES. The lesser known organizations (DERA; K1MAN's thing; et al) only serve to confuse community officials as to whom they should turn to for disaster comms. RACES and ARES complement each other quite well (one being run by local government, while the other being ARRL-affiliated); shouldn't these suffice for any situation?

Jeff NH6IL

2473. Re: What does "trunked" mean?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-07 00:00:00 UTC
From: Jim Cowburn <100553.1214@CompuServe.COM>
Message-ID: <3oi6q1$494$2@mhafc.production.compuserve.com>
Source record: 246981

Trunking is when a channel is shared by several users like the phone network. Usually a trunked system will have a pool 3 or 4 comms channels and a "control" channel. Mobiles and base stations communicate via FFSK or similar down the control channel and a comms link is set up automatically between a mobile and base on one of the comms channels. Once the contact is over, the comms channel reverts to the pool for the next user, this how cellular phones work.

From: AAAT01C@prodigy.com
Message-ID: <3oiso3$1igu@usenetw1.news.prodigy.com>
Source record: 246983

Open 440 repeaters in So. Cal? You must be kidding...

I monitor the 440 band constantly and I never hear anything except for a phone patch or 2 a day.

I'm compiling data on the 70cm band in So Cal (no thanks, got plenty of help)
to eventually bring SCRBBA to it's knees for the monopilization of the 440 band with closed and private repeaters. Were starving in SO CAL (especially Los Angeles) for repeater space and eventually something has to give.
Perhaps we should just throw the coordination that SCRBBA claims to maintain and just put up our own 440 repeaters that will be used to communicate, not just occupy a space in the band plan without any real use.

We really should start a movement (or revolt) and form our own coordination body for 440 (tis legal) and get 440 back into a usable state instead of a stagnating pile of OM repeaters and get rid of the good ol' boys network.

These people think they "OWN" the spectrum, but, believe me, things are going to change, one way or another.

Source record: 246987

1. Is it possible to convert a VHF GE Mastr II mobile unit to repeater operation with 600 kHz
separation?

2. Have you done it successfully? If so how?

Our conversion suffers from poor receive quality, either due to poor receiver sensitivity or
desensing inside the case.

3. Any experience with this? Remedies?

SimTel/msdos/hamradio/
ak40.zip Amazing Kenwood v4.0: Kenwood radio controller

Amazing Kenwood will control your Kenwood radio through the RS-232 and
the Kenwood IF-232 interface. Amazing Kenwood supports all Kenwood HF
transceiver and receiver models.

This release includes: External memory channels, COM1-COM4 support, Model
sencitive commands, 4 Rig operation, anti-virii routine, and more...

Special requirements: Kenwood IF-232 interface.

The R390A has additional filters, and I think the "Standby" mode
is a change from the R390.

$250.00 seems a tad pricy, since this is basically a CW/AM-only
receiver, and not particularly sensitive. A very nice specimen
might be worth that for collector purposes, but not for routine
use as a station receiver.

I need the frequencies of any 2-meter repeaters in New Zealand.
The 1995 ARRL handbook has many countries, including Australia,
but no entry for NZ.

Please mail me directly to avoid cluttering up the newsgroup.

> with both the main and the sub band at the same time. That is, two VHF
> stations (repeaters,etc.) or two UHF stations, etc.

This heightens my suspicions that a very large number of sub-standard FT-5100s and FT-5200s were shipped. I suggested this to Yaesu Customer Relations in Tokyo, but they strenuously denied it.

Both rigs (which are essentially the same) were discussed in this newsgroup about a year ago. There was a strange mixture of postings, about 50% of which said they were great radios, and 50% (including mine) which suggested that they were the worst radios Yaesu have ever marketed.

A pattern emerged with a set of common problems:

1/ Lousy transmit audio
2/ Very poor intermod performance, on both 2 and 70
3/ Susceptibility to popping panel lights for no apparent reason
4/ RF feedback causing an audible hiss or whistle from the speaker when on 2m, most apparent with the repeater shift on (?)

My own FT-5200 exhibits 1, 2 and 4.

In common with other dissatisfied owners, my local Yaesu service dept (Yaesu UK) could find nothing wrong with it.

According to Martin Lynch's (Ealing, West London) latest propaganda (see ads in various magazines), his range of 'radio ready' PCs (made by Peacock) were specifically selected for their low RFI.

However, since Martin was also the guy who assured me that the Yaesu FT-5200 was a high-quality rig with a super front end and nice tx audio, I would test one very thoroughly before buying if I were you. Maybe a posting in uk.radio.amateur would help you find a Peacock PC owner.

correct, but such an animal does exist, and it IS type accepted. try
looking around for an icom H16 commercial grade handheld. it uses and
supports all of the ic02 and 04 series battery packs and chargers. the
unit runs from 2 meters (acceptable reception in the 2meter range, front
end is much better in commercial though) through 180MHz. inside the
unit, a jumper should be in place which allows you to program up
frequencies from the front panel through a programming sequence. once
you get used to it, the unit is quite versatile and no one can tell you
that you are not allowed to use it on the frequencies you have specified
(so long as you are licensed, right? O:-) <-- (halo))

let me know if you can find one. it looks quite similar in appearance
to an icom 02AT, with the exception of the display being centered at the

top of the keypad rather than off to the left. i'll email you all the programming information if you find one. don't pay more than $300 if in usable condition, $400 if in mint condition.

Amateur Electronic Supply, for one, carries the IC-H16. I helped a man in Jamaica obtain one about a year ago; he wanted something for both the ham freqs and taxi freqs. I got it there, I believe.

You're getting closer. The key to 'low-profile' operation is antennas.
Everything else is easily hidden. But the antenna has to be
electromagentically exposed to the whole world, but visibly hidden from your
neighbors. Quite a dicotomy. I think the terms 'secret', 'covert' or perhaps
'hidden' best describe this type of operation rather than 'low-profile.'
Definitely not 'QRP', as this is already well-developed as its own specialty,
and covert stations may be medium or high power if desired. The best antennas
for QRP use are very high-profile, so there would be an immediate conflict in
trying to include this topic in with the QRPers.

Whatever you do when you purchase a dual bander, DO NOT get a Yaesu FT-5200. This is the worse rig I've ever owned. The audio output is totally substandard and the Intermod rejection is even worse. Whatever you get, don't get this rig...
Tnx & 73

: itself, but rather the monitor. Two suggestions:
: I can't live with. As I mentioned, nearly all of them are from the monitor.

I definately agree. My new kenwood TH-79 goes crazy in front of my 17"
Mag Innovision monitor. It just goes nuts, that's the best way to
describe it. I doubt there is any solution to this problem, except to use
an external antenna far away from the monitor. Does anyone else have a
solution to this annoying problem?

SB DX @ ALLBBS $OPDX.205
Ohio/Penn DX Bulletin No. 205

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 205
BID: $OPDX.205
May 8, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, KC1QF, K6OZL, AA8SM, N8AC, WD8E, N4AA & QRZ DX, DF4RD, DK8KW, DL8OBC, F8RU, G0OYQ, ON6TT and Japan DX News for the following DX information.

1P0, Seborga. Geri, DK8KW, states he will be active as 1P0P between May 26-29th, with participation in the CQ WW WPX CW Contest (May 27-28). For those who do not know, the Principality of Seborga (520 inhabitants) is situated in the Alps near the Italian town San Remo. During the contest, look for Geri around 1831, 3522, 7022, 14022, 21022 and 28022 kHz. Before and after the contest he plan to operate mainly on CW, the WARC bands, 160 meters and also on 6 meters depending on the conditions. Geri states due to the new situation of the principality since April 23, 1995, (ed. Supposely this is a start day which the Italian PTT has "OKed" the uses of the 1P prefix which coincides with the uses of Seborga's own money.) the already known combination callsign of IK/DK8KW/1P0P is now changed to 1P0P. QSL via his homecall. Seborga does not yet count for the DXCC. The operators of this principality claim it has been in existance for more than 1040 years and is comparable to 1A, 3A, T7 or HB0. Meanwhile, Ted, F8RU, has called the I.T.U. in Geneva and has confirmed that the 1P prefix is non-existent in Appendix 42 of the Radio Regulations of the I.T.U. Thus the 1P prefix remains an illegal prefix such as 1S, 1A and S0...etc..

7Q, MALAWI. Peter, ON6TT, has taken up a one month contract as telecom consultant for the Red Cross in Malawi starting May 11th. He states he still holds a valid license under the call 7Q7XT. Peter states this will be a low profile operation, as for once, Tine and Lana (family) will be coming along with him and he will be spending most of his free time with them. He will have antennas for 10 to 40 meters, including a 5 element yagi that will be fixed towards Europe for 10-15-20 meters. He will be taking RTTY equipment with him. QSL via ON5NT.

9Q, ZAIRE. Alex, PA3DZN (9X5EE), who is with UNHCR telecom crew in Goma, Zaire, will be active soon after his return from the Dayton Hamvention. Alex will be there for about one year and plans to be active on 80 and 160 meters. His callsign is unknown at this time, but we will keep you updated. QSL via PA3DLM.

9X, RWANDA. Mark, ON4WW, (who is also a member of the UNHCR is replacing Alex, 9X5EE, in Kigali), is now signing 9X/ON4WW. He has put up two inverted L's, one for 160 and one for 80 meters. Mark runs barefoot mainly on CW. For the moment, his low band schedule is: 2015z on 3513 kHz, and 2030z on 1830 kHz for Europe and 0030z on 1827 kHz for US. Mark knows this does not cover midwest/westcoast, but he will try to find a better work schedule to correct this. Meanwhile, he has also been heard on 20 meters CW around 14020 kHz starting about 1845z. Mark will be there until end June. QSL via ON5NT.

C21, NAURU. Ron, ZL1AMO, is currently active as C21/ZL1AMO. His length of stay is unknown and reports indicate he has canceled his trip to ZK3. Most of Ron's activities seem to be between 0900 and 1330z on CW and 40 and 80 meters.

CHINESE'S DX CONVENTION. Chen, BZ1HAM (one of the operators/leader of the BS7H operation), announced during the DX Dinner Banquet and the DX Forum that the People's Republic of China will have their first DX Convention October 13-16th (1995). A special station, BT1DX, will be active during the convention. Visitors attending the convention will be availble to operate from this station. Also, a possibility of obtaining a BY license may be available for individuals who attend the convention. Also, Chen mentioned that a planned delegation from North Korea will be attending. He added that Martti Laine (OH2BH) will be visiting North Korea to meet with government officials on May 12th. Details and facts about the meeting were not mentioned, but let's hope that it has something to do about amateur radio.

EJ, THE ISLAND OF INISHMAN (Rep. of Ireland). This is just a reminder that a group will be active next weekend from this island from May 13-19th. Inishman is part of the Aran Island group which is off the west coast of Ireland and has IOTA reference number of EU-006. The group will be signing EJ/homecall, so look for G0OYQ, G0PHN, and G0ULN. They will be active on all HF bands and the usual IOTA frequencies. QSL via the bureau or direct to: CHB ARG., PO Box 803, Hull, HU7 4BY, England.

GAZA. The Japan DX News reports that JA1UT will be active soon as JA1UT/GAZA. From May 14-18th, seven Japanese operators are going to The Gaza strip under a United Nations aid program. They will take the opportunity to operate SSTV, 10 meters FM, as well as the usual operating modes.

OY, FAEROE ISLAND. Claus, DK9FE, will once again be active as OY/DK9FE from Kollafjoerdur, Faeroe Is. (IOTA EU-018). He will be operate mainly CW from July 10-27th. Using a vertical antenna, look for him on all bands (80-10 meters) including WARC and 15 kHz above the lower band edge. QSLs cards are to be sent to his callbook address.

SV/A, MOUNT ATHOS. Peter, KC1QF/SV0GV/EI4GV, together with Andreas, SV1BKN, will operate from Mount Athos using the callsign SV0GV/3 from July 6-9th. The operation will take place near the peak of the Mount Athos mountain, at the 1700 meter point. Operation will be both SSB and CW on the 10/15/20/40/80 meter bands. If time permits, RTTY and AMTOR will also be added. PLEASE NOTE that this operation will feature special split frequency on a per-region basis. The information/contacts will be automatically entered into a computer and if stations use the wrong frequency regions intentionally, they will not be QSLed. Peter states, "PLEASE, please, please, operate with COURTESY - pay great attention to other hams, and always listen before operating. The layout is as follows: SV0GV/3 will be listening on:

SSB
Regions Frequencies
W6, W7, W0, W5 14250-14275, 21250-21275, 28300-28325
other Ws 14275-14300, 21275-21300, 28325-28350
America (except US) 14135-14150, 21235-21250, 28500-28525
Europe 14200-14225, 21300-21325, 28525-28550
Rest of the World 14135-14150, 21235-21250, 28500-28525
ITU region 1/3 7050-7075, 3700-3725

CW

21030-21045, 28030-28045
Other Ws 7035-7060, 3535-3540, 14045-14060,
21045-21060, 28045-28060
America (- US)/RofW 7020-7035, 3520-3535, 14015-14030,
21015-21030, 28015-28030

Their transmit frequency will be: CW - 3510, 7015, 14010, 21010, 28010 and SSB - 3780, 7075 (USB), 14255, 21355, 28555 kHz

ZL8, KERMADEC ISLAND. Barry, ZS1FJ/G4MFW, is now active as ZL8/G4MFW until May 15th. Operations will be only SSB on 10-75 meters. Antennas will be a tribander for 10/15/20 meters with wire dipoles for 75 and 40 meters. QSL requests can be sent to KA1JC with one card, SASE and a donation (3 to 5 green stamps has been mentioned) to help defray the cost of the DXpedition. NO BUREAU CARDS. Rumors persist that this will be the last legal operation from Kermadec because it will become a natural wildlife refuge. This may not be necessarily true. In a coversation with Carl Smith, N4AA, the new editor of QRZ DX, he stated that he received a two page FAX that was sent out by Barry. Carl told your editor there was nothing in the FAX which indicated that this would be the last legal operation from Kermadec.

CARDS PRESENTLY GOOD AND NOT GOOD FOR DXCC CREDIT..... Jim, AD1C, spoke with Bill, K5FUV at the DXCC desk and Bill stated that 4U9U is now good for DXCC credit for Burundi, 9U. This call is among others in a not yet unpublished press release listings of DX stations good for DXCC credit. He also mentioned that the DXCC Desk has not yet seen any paperwork on 9U/F5FHI... Reports from several individuals have indicated that Graham's, ZL4MV, QSL cards for the 1995 operation to Auckland/Campbell Islands

(ZL9GD) were rejected at Dayton HamVention. The reason given was that Graham was not on land at the time of the operation, but was operating off the dock and using the power from the boat.....

RADIO CLUB VENEZOLANO APOLOGIZES FOR YW0RCV QSLS.... OPDX received a FAX from the Radio Club Venezolano which included details of their upcoming Venezuelan Independence Day Contest (details in a future bulletin) and a note from their Contest Chairman YV5PD stating the following: "Board of Directors from Radio Club Venezolano apologizes to all radio hams who contacted YW0RCV on July 94 in our DXpedition sponsored by us, since we have not yet answered all QSL received. Anyway, it has been because of technical failures luckily we already have solved; so, we will be starting to answer them on next May 15th, appreciating comprehension because of delay."

NEW!!!! VOICE OR FAX YOUR DX INFORMATION NOW! A FAX/ANSWERING Machine is now available 24 hours day. The number is 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring and dial four ones ("1111"). (Note: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. : This heightens my suspicions that a very large number of sub-standard
: FT-5100s and FT-5200s were shipped. I suggested this to Yaesu Customer
: Relations in Tokyo, but they strenuously denied it.

I current have an Icom 2410 and happy with it, but seem to have weak UHF sensitivity. I am going to take that rig out of the car and put into the house. So I am looking for a dual-bander that I can detach the front. Right now my choices are the IC-2700 and the new Yaesu FT-8500. Yes, there is the Kenwood 742 also. I am leaning to the Icom, since I already own Icom equipment. I have heard some remarks about it having a poor receiver. I would like to know all pros and cons. Also, the new Yaesu was supposed to appear in town last week but didnt make it. The big negative to me is the all-in-one mic and how large it is.

Any and all comments appreciated.

Many thanx, Leon WA4ZLW

I have duplexed several GE MVPs and have them running as our two meter main repeater and as our remote sites.

The channel guard switches to transmit when keyed and is deactivated from the receiver.

As I mentioned, these units are now duplexed.

Is there a way to have the encoder and decoder function simutaneously, or continue as the decoder on receive when the transmitter is keyed ?

john k3nxu jlamar@yrkpa.kias.com

2500. Re: How to join QCWA?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-07 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <hQ69qll.sanderman@delphi.com>
Source record: 247008

Mike, QCWA is a fraternal organization of amateurs who become automatically eligible for membership on the 25 year anniversary of their first licensure in amateur radio. I became eligible in January 1993, despite a 5 month lapse between the expiration of my Novice license in January 1970 and the time I received my Technician license in June 1970.

QCWA's "old fogey" image is gradually melting away. Activities are generally organized through local chapters that meet monthly, quarterly, or at other regular intervals. National membership in QCWA is a requirement of joining a local
chapter.

I cannot speak for other local chapters, but here in Eastern New York, our Chapter 95 monthly meetings are informal luncheon affairs. These are of a social nature. Any business may be discussed, but it is not the usual parliamentary guff. We elect officers and handle our business at an annual meeting held each September. Last night, I had the pleasure of being the program speaker for our annual banquet with 21 attendees. A nice, quiet affair.

QCWA is getting younger all the time, too. The quarterly QCWA Journal averages about 44 pages and is not the run-of-the-mill stuff you'd find in CQ, 73, and QST - they are much more personalized in nature.

For membership information, contact you local chapter or write to:

QCWA, Inc.
159 East 16th Avenue
Eugene, Oregon 97401-4017

or call:

503-683-0987

Jim Walsh, W7LVN, QCWA General Manager, will be glad to discuss QCWA activities with you and provide you with an application form.

From: gary@ke4zv.atl.ga.us
Message-ID: <1995May7.234031.23431@ke4zv.atl.ga.us>
Source record: 247011

In article <1995May1.135654.8139@emba.uvm.edu> gdavis@griffin.emba.uvm.edu (Gary Davis) writes:
>
> Hasn't the CW argument really gone a bit silly?
>First cw gives a better readability under weak or marginal conditions.
>There is no known mode including ssb or packet that can routinely
>outpace cw when the conditions are poor.

This is simply wrong. Ask yourself this question, why doesn't NASA use OOK Morse encoding for its deep space probes? If Morse encoding offered superior performance under weak signal conditions, they would use it. However, it doesn't, and they don't. The advantages of coherent uniform codes are overwhelming in a hostile RF environment. When the processing for such coding gains required rooms full of vacuum tube computers, only the government could afford to use them, but today, that same technology is available with a handful of relatively inexpensive chips. Even consumer equipment, such as CD players, use parts of this technology.

>CW is an elegantly simple mode. One can communicate with the least
>expensive and unsophisticated of equipment.

It's true that a OOK Morse transmitter is no more complex than a FSK transmitter, but the receiver, oh my, to be effective the receiver needs the complexity required for SSB. This is a red herring, however, since there are single chip solutions for all these modes (albeit currently of less performance than more complex designs). Nonetheless, the simplest receiver suitable for OOK Morse is also usable for some other digital modes. I don't expect you'd prefer a galena detector for your Morse receiver, and similarly, neither would users of other digital modes. Any receiver you'd likely consider effective for OOK Morse reception would also be at least as effective for some other digital modes. In fact, some receivers that are eminently suited to some other digital modes are practically useless for OOK Morse due to their use of a coherent data accumulator rather than a traditional detector.

This latter factor may be lost on you. You may think unconsciously that radio implies aural reception. I would point out that reception of pictures by radio, IE TV, does not depend on aural interpretation, and neither do most modern digital codes. Nor do other methods of information transfer require the extensive wetware conditioning needed for manual OOK Morse operation. This represents a cost as surely as wire and transistors. And it is a very substantial cost as well.

>Also the whole cw argument is largely a red herring foisted by those
>who have entered amateur radio at a time when requirements have been
>drastically lowered. Exams that have pre-published answers that smart
>seven years olds can memorize. (see QST seven year old gets her extra)

I took the exams back before (dis)Incentive Licensing, and before the exam pools were published (though by the late 70s Dick Bash offered verbatim copies of the exams). Yet I advocate removing the disproportionate place that manual Morse decoding plays in the examination process. I have no Calvinist belief that it is necessary to don sack cloth and ashes to earn salvation. There is no evidence that demonstrating the ability to emulate in wetware the functions of a modem on a government exam in any way makes for amateurs of a better character. No religious mythos has any place in setting government regulations or licensing.

I do agree that the current exam structure is fatally flawed. It ignores areas where the government has legitimate interests while concentrating on irrelevant factors. It favors, with priviledges unrelated to manual Morse, those who excel at passing manual Morse exams while virtually ignoring expertise in other facets of amateur communications. Considering the very minor (and rapidly shrinking) relevance of manual Morse operations to radio communications, this disproportionate emphasis in amateur exams becomes even more ludicrous. By contrast, issues of electrical safety and issues of interference due to spectral impurities, matters central to modern operations, are nearly completely ignored on the exams. Instead the exams focus disproportionately on determining if you do bad Code. Is there really a problem that requires the government to try to prevent people from getting on the air with poor Morse skills? I think not.

>IF you want to get on HF do the time. Learn the code. Stop belly-aching.

Whine, whine, whine. Your whining about religious issues won't cause people to stop pointing out that the Emperor has no clothes. If you were fulfilling your obligations under the amateur charter, you'd be aware of the communications advances that have made OOK Morse a historical artifact of little more relevance to modern communications than spark transmitters. (Not that spark transmitters wouldn't still work, mind you, just that there are better ways of doing things today than emitting damped waves, or OOK Morse.)

You're perfectly welcome to use modes as anachronistic as manual OOK Morse, or even AM voice (which pre-dates use of OOK Morse on radio, see Nathan B. Stubblefield*), if you like. No one is attempting to force you to stop. There's room for Society for Creative Anachonism type operations in amateur radio. All people are saying is that you shouldn't be forcing *your* operating prejudices (or religious beliefs) on them via appeals to government force as embodied in the amateur licensing process when there is no compelling reason to continue such emphasis on OOK Morse in testing today (if there ever was, by definition, those who don't know Morse, can't do Morse, so the problem of poor Morse on the air, if one exists, is self-limiting). Is that really that hard to understand?

Gary

*The early use of other modes than OOK Morse on radio is a fasinating subject in itself. Marconi was using FM voice on 5 meters as early as 1910. Several experimenters had been sending other encodings much earlier than that, including Tesla who was using radio to remote control boats as early as the late 1880s, and Stubblefield who sent AM voice over distances of several miles in the 1870s, though he didn't really realize he was doing "radio" at the time, there being as yet no theoretical underpinning for the science. These people were demonstrating the true amateur spirit in the sense of pushing the limits of the known in radio. They weren't looking backward, trying to relive past glories, they were looking to the future. Should Stubblefield or Tesla have been required to pass a test in a wireline method of alphabetic encoding for which they had no use before being allowed to pursue their experiments? I think not.

The parts would still come from overseas, Duff.

>The reason they build the stuff there is that the Koreans can make it
>so cheap.

But the Koreans don't necessarily *design* the gear. If you're unhappy
with the operation of an item get after the designer, not the manufacturer.

>... but excessive
>profit is ripping off the consumer.

It's called capitalism. If you don't like the idea, then we'll chip in
for a one-way ticket for you to the country of your choice: North Korea,
Cuba, China, Viet Nam, or Laos (none adhere to these evil capitalist ideas).

Or, maybe you should stop being a consumer-ham and start building your
own gear (oh gad - I said the B-word!). But good luck trying to get American-
made components (really not necessary, though - a resistor from Malaysia
does just as good a job resisting electron-flow as one made elsewhere).

(To see capitalism in action among hams peruse rec.radio.swap.)

>If everybody could get the chance
>to go through a Rat Shack price book to look at their cost and retail I
>think you would be shocked at the mark-ups.

I imagine we could substitute Sears, Ford, or any other company name
for `Rat Shack' in your statement. (Your local jewelry store marks up
their cost 200-500% to get retail.)

>Duffy

Say Duff, did RS turn down your credit application? Your anti-RS posts
lead me to believe you have some ax to grind. You used to work for them -
did you get fired?

2509. HAM LOG v3 - Here it is!

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-07 00:00:00 UTC
From: rhg@sydney.DIALix.oz.au
Message-ID: <3oh5hc$5to$1@sydney.DIALix.oz.au>
Source record: 247166

Hi,

I am getting many requests as to exactly where is the functioning demonstration version of THE Ham Log 3.1 by VK2VN (the IBM computer program for amateurs to log their contacts) on the Internet. On two sites, the directory has name has been changed, as well as a minor filename change. So here is the latest information I have...

oak.oakland.edu - /pub/hamradio/pc/logging
hamlog3.zip is the only file available

ftp. une.edu.au - /pub/ham-radio/ham-loggers
ham_log3.zip; ham_log3.txt; ham_log3.diz
3 files available.

- /pub/ham-radio/funet/ham/hf-work
hamlog3.zip is the only file available

ftp.funet.fi - in directory /pub/ham/hf-work
hamlog3.zip is the only file available

Ham Log is a professional program that has a enormous facilities and functions, yet very simple to use. Indeed, USA amateurs are having the data from their old trusted programs imported into Ham Log as they are so impressed with Ham Log 3.1. From a review in The Canadian Amateur magazine:

"This is the first computer program I have in years that I really cannot find anything to improve on. With so many features, it is beyond this reviewer's ability to do it full justice. I rank it [Ham Log] as one of the 'breakthroughs' in computer technology applied to t his fine hobby, ranking with Baycom, JVFax and Hamcom."

In Amateur Radio Action (Dec. '94)...

"In my position as editor, I get to see and use most logging programs at some time or other and from my first encounter with Ham Log, I have believed it to be the best available - and that includes some quite expensive American programs."

The .zip file is all you need. Do yourself a favour and give it a try. I'm CERTAIN you will be impressed with Ham Log v.3.1. If you have any queries or comments, please e-mail me.

Kind regards,

Robin Gandevia

>it end?

Tell you what, Jim -- good ol' Geraldo is a REAL character. I just
used him as an example in an English paper I wrote for college.
Seems a while back, he decided to write a piece about how laws are
broken routinely at gun shows. He went to one and gave a teenager
somecash with the instructions to go buy a handgun. When the lad
did, Geraldo jumped all over the guy who sold it.
Geraldo got jumped on himself. Seems he had mis-interpreted the law
himself, and no law had been broken.

BTW -- I understand that Geraldo isn't even Hispanic. I read
somewhere that he's Jewish. Seems he can't tell the truth about
himself, either.

Unfortunately, manufacturers change designs at the drop of a hat, so trying to go by a model number is not likely to be a sure thing. From my experience, the most likely source of interference is not the computer itself, but rather the monitor. Two suggestions:

1. Take a two meter HT with you when looking at different models.

2. If the computer is made in the US, look for a label stating compliance to class B EMI standards. You'd think class A would be the best, but not so. A is for industrial or commercial areas where more interference can be tolerated and B is for home use where interference to TVs, radios, etc is likely to be greater, so B is actually more strict.

I have a class B computer here and have no problem at all on two meters. There are some weak harmonics at several places in the HF bands, but nothing I can't live with. As I mentioned, nearly all of them are from the monitor.

Good luck.

Well Ken, it would be nice if the local RS employees at least knew what the VOX meant on their tape recorders.

I was standing in line at the cash register one day and listened to the manager of the store tell a customer that they did not have a cassette player that was voice operated.

I happen to own and operate an electronics shop that is 1 block away from the local RS store. I try to stock things that RS does not stock. I firmly believe that RS is my best customer. They always send people to me when they think that they do not have the item in stock.

I usually keep a new RS catalog on hand and when they come in and ask for an item, if I do not have it, I tell them to try Radio Shack. They say "I just came from there, and they sent me here".

I will pull out the catalog and write down the number of the item that the RS salesman told them that he did not have, and send them back.

Most of the time they go back to RS to buy the item that the RS salesman told them that they did not carry. I have, however, had the customer get upset about it and ask me if I could special order the item for them. Of course, I usually always oblige.

As I said, I do not stock items that Radio Shack carries, but this has happened to me hundreds of times in the last nine years that I have been in business.

I have for sale a TH6DXX tri-band beam (10-15-20). If you are
interested please leave email at Fredez@ix.netcom.com or call me
at 214-233-2386. the price is negotiable. I am located in Dallas,
TX, and it is not practical to ship the antenna. I also have a
CDE CD-44 rotator without the control box for which I'm asking
$35 plus shipping. Thank you much for reading this...Fred W5HTR

Hi pete

I could not find a search feature on your web page. There was a long unformated list or index. The folks at QRZ cd-rom have a callsign look up search and they have lots of amateur radio files and programs to down load.

Please provide a service to this amateur community. QRZ does not advertize here....every one links to them on the web! There is room to compete with out filling every radio news group with pointers to your off shore order form. Is it a secure server for credit card info?

jeffrey@math.hawaii.edu wrote:
: Okay Shawn, I've got a challange for you. You construct an n-ary FSK
: system from scratch and I'll construct a ook communications system from
: scratch; let's see who will get on the air quicker, and have more
: QSOs. (My definition of building from scratch is using discrete
: components. Plugging ICs into sockets is not `building from scratch'.)

This always seems to be your challenge. First, the arguement was t
that CW had better preformance in a noisy environment. Second, limiting
yourself to discrete components is like supping up cars for a drag race
only using large chuncks of spare metal. Face it, integrated, multifunction
parts are gettig to the point where they are as cheap and available as
single, special purpose discrete components. If someone can build a radio
with op-amps, why is that not as good as BJTs or FETs? (This may actually
start happening with the way op-amps are advancing)

: > I don't want HF privs. Let's face it, theres only 7MHz od bandwidth
: >down there. I just don't like people making CW sound better then it really
: >is.

: If you want to restrict your communications life to a radius of 5-10
: miles (unless you insist on using someone else's radio [i.e. repeater],
: then that's fine. I just worked someone in Tonga (in the South Pacific)
: using a homebuilt 5W transmitter (CW of course!). The other fellow
: also had a homebuilt rig (and you'll never be able to have a QSO
: with him, for he only has CW capabilities).

VHF and UHF have moonbounce, satellites, and packet relay if they want
to communicate long distance. Some of us did not come to ham radio to
trade cards, compete in contest, or chew a communal rag. In fact most of the
people I deal with in ham radio are there for the technical aspects. If
you want to do HF QSOs, go ahead. It just doesn't interest me. You want
to talk high speed packet radio, I'm all ears.

73,
Shawn

PR> None of my 3 (older) 2m ht's had a scan function. None had PL.
PR> The first one had only a handful of channels (crystal controlled).
PR> I don't know what 2M I'd get if I were shopping today but I like
PR> those little Kenwoods with the thumbwheels on top (TH-21?) and
PR> they have no scan functions or PL either (basically a shrunk
PR> down version of my old IC-2AT).

Paul, I am a fairly "new" HAM; being only 4 yrs since licensing. Having only
3 HT's (purchased at SWAP-Fests) 2 are rock-bound. The latest, synth. with
thumb-wheels. Had I the purchasing power I would purchase something from
STANDARD; they seem to exhibit the functions I want; without the higher
purchase prices as deemed necessary by the BIG companies...
My drothers- I would go ICOM. Have used such and love their units; the prices
seem too high for my personal pocketbook. :(Oh well, to each their own!

>If your interest is ememrgency communications then you want the band
>to be crowded so I think you bought the wrong HT, if you want a more
>quite and possibly private band I'd suggest 220.

Jls, it's totally possible something was edited from this paragraph;
wanting a crowded band could possibly BE 2M however, whilst not on a
REPEATER Freq. there seems to be a lot of "quiet" freqs. to be found on
SIMPLEX! Mayhaps not in a METRO area, but here, in the MidWest, there are
days when NO-ONE SIMPLEX FREQ. is used!

PR> Emergency communications weren't a major criterion when I bought my
PR> HT. I find 440 to be quiet enough. I mainly picked it because the
PR> people I wanted to talk to have 440 equipment, the band is fairly
PR> quiet, and the HT and antenna are smaller than corresponding 2m or 220
PR> stuff. If I had it to do over again I'd probably take the slight
PR> size/weight penalty and get a 440/2m dual bander.

Paul, many of my HAM friends have a dual-bander rig. Out of my own curiosity,
I cannot fathom why the major companies HAVEN'T introduced a tri-bander;
encompassing 2M/440/220. Maybbe it's just a question of Harmonics...

There are many, who, operate on 2M and 440; and a few that like 220. Yet,
no rig yet encompasses all 3 options! WHY??

Whether the Rig be large or small, Paul, I use the frequency because I like
the attributes of the freq. or the associated personage that rely on those
frequencies. Whether it is "politically-correct" as demonstrated by those
that have the Cell-phone units is not necessary. I personally would rather
"earn" my priviledges through learning [teaching my MIND] rather than spending
dollars to have a "priviledge" and having it yanked if I missed a month or two!

May your QSO's give you JOY!

What dose someone want to know about 146.9250? I have been an active
member and control op on that repeater since the mid 80's. Way back when
it was located in Baldwin Hills. If anyone needs assistance with the
repeater I will be glad to assist.

This just goes to show you that *anyone* can learn the code, even lids.
But it's too bad you don't venture into the CW portion of 80. It's
a wonderful place to hang out.

When doing some FCC Class B testing a while back, the guys out at the
test range used Hewlett-Packard systems as the reference PCs for
'computer peripheral' testing. Their rationale was that they had measured
the lowest emissions levels on those, so they posed the least risk of
pushing a tested unit out of compliance. The FCC requires that the
peripheral pass *as a part of a system*, so system emissions can screw
you up if you're emitting on a frequency that the PC also emits on. The
additive signal can push you over the limit even though the tested
device *by itself* would pass.

There's no comparison all right, but it goes the other way. Take a look at the Voyager probes. Both are now outside the solar system. Neither has a total spacecraft power budget in excess of 40 watts any more, but communications can still be maintained with them because they *do not* use OOK Morse. Even the super-cooled receivers at Goldstone couldn't pull OOK Morse from Voyager out of the noise. The one way free space path loss from the Voyager probes is 293.5 dB. Contrast that to the two way path loss for 2 meter EME of 253.5 dB (194 dB of that is free space loss, and the rest is mainly due to Rayleigh scattering from the lunar surface). The 40 dB difference could not be dealt with by OOK Morse, but is easily handled by the Golay coded coherent transmissions of the Voyagers.

If amateurs used modern codes, EME would be obtainable by many modest amateur stations. Kilowatt amplifiers and large antenna arrays would not be required. Think how much information could be exchanged with a 40 dB SNR margin on the path. The Navy did in the 1950s. They used the Moon as a passive reflector for multiplex digital traffic before the Fleet Satcoms were placed in orbit. (They did it with brute force back then, of course, using 50 kW transmitters to send their 8-way multiplexed RATT signals, but that's only 17 dB better than a kW amateur station. Good codes can yield much better gains than that.)

I'd also direct your attention to the use of correlation detection of coherent transmissions by the Lowfers. With 1 watt and a 50 foot antenna limitation, they can reliably pass traffic over 1,000 mile paths at 160 kHz. I won't attempt to calculate the groundwave path loss for that. I'll merely say that the signals are completely inaudible to the ear. The phase accumulator technique synthesizes an equivalent bandwidth of 0.001 Hz, which does wonders for the effective SNR. Petit tried to apply that technique to Morse in a system called Coherent CW, but the irregularity of Morse made the improvements only modest.

OOK Morse is an irregular and incoherent encoding. It throws away many dB because it was never designed with the idea of weak signal detection in mind. (Heck, Shannon wasn't even born when Morse devised

his landline telegraph.) The idea that OOK Morse is intended for, or well suited for, weak signal work is simply wrong. It is better than some worse techniques like incoherent AFSK, but that's faint praise, sort of like saying a Shetland pony is a race horse because it can beat a lame mule.

OOK Morse is not a good code for weak signal work because it fails to exploit the advantages of coherent detection, and because it lacks the uniformity that makes phase accumulation possible. It's also a poor weak signal encoding because it makes no attempt at forward error correction, indeed, it doesn't even have checksums or other rudimentary error detection.

Of course in its original setting, that of driving a pen against a moving strip of paper on a quiet landline, there was no need for Morse to be designed for weak signal usage. Instead, it was designed to be easy to sight read by exploiting letter frequencies in written text so that the more common letters used simpler marks on the paper strip. The word telegraph means distant writing after all, and that's what Morse intended, distant writing. The idea of detecting it aurally occurred accidentally when some operators noticed they could recognize certain letters by the patterns of scratching noises made by the pen. The fairly sophisticated signal processing power of the brain has been exploited to turn this pony into a lame mule beater, but even the power of wetware isn't sufficient to prevail over purpose designed weak signal coding systems.

Two very good commercial programs that do this are DeLorme Mapping's
Street Atlas, and City Streets by ROAD SCHOLAR Inc. Neither is cheap,
but both have very detailed map databases, and friendly user interfaces.
Of course there is also the shareware APRS program. You have to cook up
your own maps, and there are only a limited number of points you can have
on any given map, and the user interface is, to be kind, user hostile,
but the price is right.

We were taught to duck and cover during the 1950s. Today you'd probably want to chant, "The ozone is falling! The ozone is falling!" :-)

Geomagnetic storms are associated with flare activity on the Sun. When the field is disturbed, normal HF propagation paths are often disrupted, but unusual propagation opportunities may arise. Look for increased auroral activity, or even FAI propagation to be temporarily enhanced. Haunt the lower VHF bands looking for Dx opportunities.

I have the Commanche, the pickup version of the Cherokee (or vice versa depending on which side of the chicken you're looking at). Most of the problems can be traced to one thing, they painted the parts before they put the vehicle together. Thus you have lousy grounding. The only solution is to bond, bond, bond to try to get good electrical contact between the various parts of the vehicle.

I HATE to do this...but the time has come.

In early March I shipped a Motorola Radius P100 radio to a
Mr. George Vuckovic of Lake Forest, Illinois. Subsequent to
this I heard from him exactly twice, both times when I queried
him as to the testing he had done to assure himself of the
condition of the radio.

Since early April, nothing.

I dislike being taken for $150 or so, so hence this message.
If you have opportunity to do business with this individual,
BEWARE!

His E-mail access name is: Vuckovic@ Interaccess.com
He is supposed owner of Weniger Lighting Systems, Inc, which I
cannot locate a commercial listing for, and the home address
that he gave me has no associated telephone number.

If I am mistaken in this, George, I will publicly apologize when I have a
check in hand.

Alan J. Richer
richer@village.com

If any of you have any information as to what the fraud laws are in the state
of Illinois, please email me. I am angry enough to fly there and pursue this
in a legal fashion...damn the cost.

Just to give an alternate viewpoint, here are several of the QSO's that I have had on the local repeaters
recently:

Ways to increase performance of your rollerblades
Recreational kite flying
Choosing the right college
The best dual-band HT
buy a linear amp vs. trade up for a mobile rig
How to survive high school

I think that there are a lot of interesting, eloquent and just plain _fun_ amateurs out there. The fact that
you can't seem to find them is not our problem. If you were really as interesting as you say you are, you'd
attract interesting people to you, just like your CB'er "buglight" theory. If you can't find intellectual and
social gratification on the airwaves - find it elsewhere. No one is _forcing_ you to be on the air.

FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 08 MAY AND FORECAST FOR 09 MAY - 11 MAY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 78/17

GOES satellite data for 07 May
Daily Proton Fluence >1 MeV: 1.0E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.4E+09 (very high)
X-ray background: A5.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
09 May 10 May 11 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 09 May: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 07 May
Learmonth 18 4334 4233
Fredericksburg 15 19
Planetary 18 20

Observed Kp for 07 May: 3344 4234
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
09 May 12 Unsettled
10 May 10 Unsettled
11 May 7 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

08 May normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
09 May normal normal fair
10 May normal normal fair
11 May normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
08 May 8 slightly below predicted monthly values

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
09 May 10 Near predicted monthly values
10 May 15 Near predicted monthly values
11 May 15 Near predicted monthly values
COMMENT: MUFs at Townsville were near predicted monthly values. MUFS
at Hobart were about 25% below predicted monthly values.

>components. Plugging ICs into sockets is not `building from scratch'

This has to be among the silliest statement made on the code topic.
Engineering today is primarily integration. If you want a definition
from scratch then you have to make your own vacuum tubes (I don't
suspect you even use transitors as they are too new), your own
capacitors, resistors, etc. IC's are just the modern equivalent
of what those things were in their time.

Everything has a season. When the season is over, it is over.
Wishing things were like in the 30s and 40s isn't going to change
the progress of time. It justs means that you will get run over
by the change.

2553. Dumbing down?! How could it get any dumber?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-08 00:00:00 UTC
From: Greg Smith <greg.n.smith@daytonoh.attgis.com>
Message-ID: <D89BIw.KqA@ranger.daytonoh.attgis.com>
Source record: 246945
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I've watched the "dumbing down" thread for some time and it has taken on quite a life of its own. People are angry, defensive, and resentful over this topic. The biggest issue seems to be that relaxed code requirements have led to the decline of the quality of amateur radio operators.

Listening to 2m the past few mornings, I heard people talking about:

-who had the best outfit at last night's local ice skating show
-pouring hydrogen peroxide in his infected ears and how much it foamed up
-how good Big Boy's peanut butter pies are
-how terrible one guy felt and how he couldn't take off any more work because he was saving sick days to go to the lake to catch catfish
-Who has the best donuts in Englewood, OH
-How many fake IDs he (security guard) busted at the prom this weekend
-and many others too stupid to even bother to write

If you want better quality amateur radio operators, don't make people take code tests. A monkey could learn code given enough time. The FCC should make people take *personality* tests. The problem is not a lack of technical expertise. The problem is a bumper crop of REALLY boring people who have nothing worthwhile to say to each other but continue to engage in these infinitely inane conversations just for the sake of being on the air.

If you want to increase the quality of operators, you have to attract some diversity to the airwaves. With people like those illustrated above, is it any wonder 3/4 of the known world thinks amateur radio operators are geeks?!

Amateur radio needs people with diverse interests who actually have something interesting to discuss. Maybe I'll even go as far to say that amateur radio needs people whose primary interest is NOT amateur radio. Don't get me wrong, I think discussing equipment and homebrew projects is great, but if daily life comes to a screeching halt when the batteries go belly-up, then a personality/"life" deficiency is clearly indicated.

Clubs need to educate members that amateur radio serves a greater purpose than a radio partyline. We had an MS walk-a-thon this weekend. One of the area clubs provided communications support for that event. That's great! That's what amateur radio is all about. That's how I want to get active, helping people and sharpening my radio skills.

I know, it's a free country and boring hams have the right to talk about anything Part 97 allows them to discuss but think about the example you boring hams set for the rest of the world. Everytime you key up to talk about the corns on your feet, have you disuaded yet another person from entering this great hobby? Does your daily conversation advance the radio art or is your HT just a substitute for quality face-to-face human contact? If the latter is the case, please buy a CB and move your idle conversation to the 11m "buglight" where it belongs.

No-code technicians haven't aren't ruining amateur radio. Boring people with boring lives are doing it.

2554. Dipole antenna--shape and SWR

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-08 00:00:00 UTC
From: thomasr@acpub.duke.edu
Message-ID: <3ol65u$186@news.duke.edu>
Source record: 246946

I had a speaker-wire dipole for 10 meters in my attic as an
inverted "V" and the SWR reading was about 1.1:1. We just moved
and I hung the dipole in my new attic as a horizontal dipole to
get it away from wiring traversing the attic. Now, the SWR is
1.5:1. What factors could be causing the change? Location?
Shape of deployment? Different coax used this time? Combination of
factors?
Suggestions appreciated.

Source record: 246947

Fred,

I think you are missing the point. I do not wish to argue whether or not you have right to change your own product - clearly you do. Just as a point of clarification, you did change three things in the summer '94 (at least that was when I became aware of these changes from a user we have in common) edition. Here are the three changes:

1. The directory structure of the CD changed. Prior to summer '94, the files I use were located in the \unix directory, summer '94 moved the files to \unix\source

This was not a big deal since we keep the path to the files in an environment variable. No code change needed on my part and a simple modification to the autoexec for the user.

2. The extension to the file changed from .CBK to .DB.

Again, because of using environment variables, no big issue.

3. The clook.c file changed BIG TIME (look at lines 71-75 of this file on the summer '94 edition. The function call to callcmp was commented out and replaced with a call to strcmp.

A simple one line change? No, lookups failed to work unless I changed my code to include this one line change.

Are you entitled to make these changes? Sure you are, but when a developer asks for some simple email about the changes you made, and gets a reply to send $20 to get a copy of the disk and to test the product himself, I have a real problem with this. And when two additional requests go ignored (no return email), this doesn't help.

Fred I am not challenging your technical ability or the quality of your product, but your business sense. Luckily, your publisher had the good sense to send me a copy of your CD-ROM, since they couldn't answer my questions from a technical viewpoint.

Buckmaster and RT Systems notify me of changes coming down the road, and supports those changes with information free of charge in addition to a CD ROM to test with. I don't think it is too much to ask for the same courtesy from you.

I hope to be able support future editions QRZ in LogMaster Plus/Plus. The ball is in your court my friend.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

A friend recently picked up a Standard C508 HT, and when I saw its size,
I was truly amazed.

It even runs off 2 AA cells. I was very impressed.

Now, how is its performance? I know Standard is usually good with
unwanted signal filtering.

How about wide-band receive? How modifiable is it? How wide can it go?

Please supply all info, including any mods you may have.

I'd like to add more mods to the oak.oakland.edu:/pub/hamradio/mods

section.

Thanks much!

The most fun I've had at a museum was the Vintage Wireless Museum in
London. It is in the curators house, and the house next door. His name
is Gerry Wells, and is charming. He has hundreds of broadcast recievers
from all over the world and a story about each one. This is a slow
paced tour by appointment only. Tea served on the hour. The last time
I was there in 1990 he was setting up to manufacture working replicas of
early tubes (valves).

Well worth the visit

Well that certainly is an up-to-date definition of homebrewing. Why
stop with discrete components Jeff? As long as you're going to pick 20-50
year old limits on technology, why not require blowing the glass for your
homebrewed tubes? And building your own vacuum pump to draw a sufficient
vacuum to make those tubes work? Maybe you should be required to smelt
the ore for your screens and grids. With attitudes like that, it's no wonder
amateurs stopped contributing to the state of the art. Hard to build modern
communications gear using antique parts. Maybe we should just call you
McGuyver.

|>> I don't want HF privs. Let's face it, theres only 7MHz od bandwidth

|>using a homebuilt 5W transmitter (CW of course!). The other fellow
|>also had a homebuilt rig (and you'll never be able to have a QSO
|>with him, for he only has CW capabilities).

Let's see, there have been several Hawaii/West Coast VHF/UHF openings
recently. Even barefoot HT's will often do better than 5-10 miles. Any
reasonably equipped weak signal VHF/UHF station can regularly work out
400-500 miles. My meteor scatter, aurora, and Es contacts range out to
1500 miles or more. In a few years, world wide 6 meter propogation should
be possible. And last I heard, EME provides world wide propagation.
Guess those tubes of yours just can't be heard breaking more than 5-10 miles
away. ;-)

As for talking to your friend in Tonga, who says you have to know Morse Code
to utilize it? I made plenty of Morse Code contacts long before I knew
a single character.

Doug,

If you're in Macau, you might pay a visit to the CPT museum in the
centre of town at the Central Post Office. Visit it in the afternoon.
You might have to wait 10-15 minutes for someone to get the key and
open it for you. They have old telecom equipment including an exchange
from the 1930s. Lots of Marconi VHF equipment, a broadcast studio
and a collection of stamps (it is a PTT museum after all!!!).

He was operating a remote base, in this case an HF station with a UHF control link. Why do you think he was not working for the contact? He is tuning and adjusting through the link rather than twiddling knobs. So what. He's likely working harder for the contact, he needs to control the HF end blind. And it likely is his own station, or a club station he belongs to. Why shouldn't these contacts count for contests.
[disclaimer: I am not a contester myself.]

>I guess you could say I would like to ask what is the purpose of

>enough without doing that. Plus it always offers a chance for ham
>to operate outside his license.

Seems a rather narrow view to me. There are 10m repeaters, and SW broadcasters use repeaters. Why do repeaters need to be the sole domain of uhf / vhf operations? It is true that more spectrum is used, therefore some discretion is needed. As for what the purpose of such a remote base might be, I have heard two very good reasons in the past: 1) Mobile operation, much simpler to install and operate uhf / vhf in a car. 2) CC&R restrictions on antennas. Perhaps not as much a problem in No. Carolina, but in many areas an HF antenna can not be erected in a residential zone due to CC&R restrictions, PRB-1 does not apply, since

these are not government imposed laws but civil "agreements". Some people erect and maintain a remote base in an area where they can have an antenna, and operate remotely using a link. This can be an expensive solution, so it is usually a group of hams pooling resources. There are usually control codes to restrict operation to those who have permission and the appropriate class of license.

>Again these are my opinions only but I would like to keep HF for
>low band and the operation of my station.

>73's Jim // WA4ZXA

You need to expand your horizons, he's doing the same thing you are - via a remote link.

No, Greg, you are slightly misinformed about the FCC requirements. The jumper cannot legally be left in place to allow front panel programming. As I stated earlier, this violates the FCC type acceptance and makes mere POSSESSION of the unit illegal. Refer to the FCC Rules (47 CFR) Parts 2, 15, and 90 for details. That's why there is a printed warning in the official Icom service manual telling the service tech to remove the jumper before the unit is handed to a commercial user. Federal courts have upheld the FCC's presumption that possession of a non-type-accepted unit indicates that the user intends to communicate using equipment that is prohibited under the rules.

Under Part 97, your Amateur license does allow you to pick any frequency within the 2M band from the front panel of your rig. The FCC commercial rules in Part 90 are not so generous as to allow anyone to simply buy a radio and program it to the frequency of their choice. Thus, if you decide to mix two or more radio services into the same radio unit, you have to abide by the strictest of every requirement where there is a difference between the various service rules.

The FCC periodically issues warning statements to the amateur community reminding hams that they are prohibited from operating on Part 90 public service frequencies with their non-TA'd amateur equipment. They also routinely seize ham radios found to be illegally programmed to operate out of band and suspend or revoke the user's amateur license.

What are the common frequency spacing for the 6m, 2m, 220MHz,
440MHz, and 23cm ham bands for voice (phone) communications?

10 Khz seems common, but is that the case on all bands? I realize
beacons are many times on 5 Khz spacing, maybe CW too.

Thanks,

Mike

This statement might be a little strong. I haven't looked recently,
but I regularly read the FCC news releases last year, especially the
FOB release, which details such actions as you describe above. I
didn't see any such seizures/license revocations. Can you point at a
few documented cases?

Thanks!

I picked up a box of MVP CG boards at a hamfest last year (sans versatone elements... sigh!), hoping for the same. Unfortunately this isn't possible: as I remember when trying to use one on a new repeater project the PL Decode activity line went active (and stayed there, or at least falsed on and off) while the unit was encoding tone. Half-duplex tone operation only I'm afraid- unless someone has scratched their head longer looking at the schem. than I did (I had other boards available- so KISS dictated to use them instead).

Unfortuanately for use shoestring-budget-amateurs, Comm Spec's Ts-32 board is still the most available , cheapest board capable of constant, simultaneous encode/decode (granted the same tone is used for both functions). At $58/ they are do-able but rack up quick with multiple decoders, remote receivers, links, etc.

There is nothing wrong with working a station this way, but note that DXCC rules, for one, forbid using such QSOs for DXCC credit.

Rule 6: "All contacts must be made with amateur stations working in the authorized amateur bands or with other stations licensed or authorized to work amateurs. Contacts made through "repeater" devices or any other power relay method (aside from Satellite DXCC) are invalid for DXCC credit."

>We are currently tryeing to operate a Johnson PPL6000 that has a CFU455D
>Wich Supposed to be a +- 10 KHz for 3 DB and It makes Us a lot of Errors
>In the reception Part .

The full bandwidth for a G3RUH style 9600 baud modulation is 16.8 kHz, assuming 3 kHz peak deviation. More important to the error response of your receiver, however, is the group delay characteristic of the IF filter. If the phase shift is strong near the passband edges, which it usually is, then you'll have a lot of errors if the filter is only somewhat wider than the signal. A wider filter, say 30 kHz, can keep the signal in a more phase linear region of the response, but of course your SNR is degraded by the excess bandwidth. The best solution is to find a filter with good group delay response combined with minimum bandwidth. That's easier said than done, however.

Before getting out the checkbook and soldering iron, try different deviation settings at the transmitter, both lesser and greater than 3 kHz peak. Recent tests published in QST show that the recomended 3 kHz deviation is not optimum for many of today's radios, and that a wider deviation may actually result in fewer errors in some cases.

You can conduct BER testing by feeding the transmit modem a continous mark and attaching an accumulating counter to the receiving modem output. Any zeros received indicate errors. (Due to the way the scrambler is implemented, the count will be higher than the actual channel BER, but since the scrambler is in place during actual use, the count will still reflect the number of errors you will have in the operating system.)

Now I have had just about enough of all this 2m is better than cell crap anyone should have to endure.

2m and cell phone are NOT comparable..you can not do business on ham bands and anyone who talks on a cell phone for a hobby is a total waste of human organs..

In urban areas either one would do just fine in rural areas don't count on either one.

But the last I remember from my communication technologies class was you could talk simplex on a ht don't think you can do that with a cell phone. And thats all I have to say 'bout that.

Geraldo's real name is Jerry Rivers. He changed his name to enhance his minority appeal. Adopting another name is a fairly common show biz trick, and make no mistake, Jerry is in show biz, not journalism. (There's little difference today.)

If I remember my TV Guide correctly (now there's a seditous publication), Jerry's father is a native New Yorker of the Jewish faith while his mother's heritage is Puerto Rican Catholic. So Jerry isn't really lying about himself, just being selective in what he wants people to think. That's typical of media personalities as well. He was one of the originators of the gonzo investigative journalism technique where shock value is more important than accuracy. The overhyped opening of Al Capone's vault pretty much ruined any pretense Jerry may have had to being a serious journalist. Nowadays, he's just another shock talk jock competing with Donahue and Montel Williams for the attentions of bored housewives with liberal pretensions and a taste for perverted titillation.

You can not talk simplex on a cell, O.k. you have to find someone else on the right freq to talk to but in an emergency stituation can that be arranged?

Can I call up my broker and put in a buy order on my ht? or call back a client about the house he wants to look at off of my mobile rig?

I dont see how you can compare the two, in urban stituations they have differnent uses in a emegency situation in rural areas don't count on either one.

: A pattern emerged with a set of common problems:

: 1/ Lousy transmit audio
: 2/ Very poor intermod performance, on both 2 and 70
: 3/ Susceptibility to popping panel lights for no apparent reason
: 4/ RF feedback causing an audible hiss or whistle from the speaker
: when on 2m, most apparent with the repeater shift on (?)

My school radio club bought one a year ago.... few months later had to
return it . Problem was that it stop transmitting.Hows that for a
reliable Yasue 5100 ??

>the "intercommunication" requirement has been and still is an integral
>part of the *HF* amateur requirements, by international agreement. Therefore,
>until a substitute "intercommunication" medium is identified, Morse code
>will likely remain as part of the international regs.

But using Morse alphabetic encodings does nothing to supply a "common language". It is the standard abbreviations (primarily of English words), Q signals, etc that are the "common language", not the particular encoding of these letters. Encodings as ancient as RTTY, or as modern as PACTOR II, can carry these same abbreviations and Q signals. Morse is not required.

It's this fallacy of Morse as language that lies at the heart of this "common language" misunderstanding. Morse is no more a language than any other encoding of alphanumeric symbols, IE such as Baudot Code, ASCII, EBDIC, etc. It's what these encoded letters *spell* that is language.

It's only *tradition* that says these abbreviations and Q signals are spelled in Morse encodings. (That and the fact that Morse has so much lesser throughput than the other modes that abbreviations are a necessity to get anything through in a reasonable time.) With other character encodings, we tend to spell things out in full because there is little time penalty for doing so, but we don't *have* to spell things out in full. We *can* use the same abbreviations and Q signals as are commonly used in Morse if we wish. The "common language" remains, no matter what encoding we use to transmit it.

I have no disagreement with the idea that a non-verbal transmission mode is helpful between parties with no common spoken language. The problems of accent and cadence are real, but they are solved by any non-verbal form, not just OOK Morse encoding of alphanumerics.

No fair using manufactured parts, Jeff. You have to refine your own
ores and polish your own galena. If you insist on using stone age
methods, then you really should restrict yourself to stones. The
rest of us prefer to use late 20th century parts.

>as I know it.

That's not completely true. While an obvious solution is to do as Kenwood does and use a very low frequency IF, there is another way. You can sub-sample a much higher IF and the passband will alias down to baseband. While the A/D sample and hold has to be fast, the flash converter and the processor don't have to be faster than what would be required for baseband signals. In fact, you can use this technique directly at the operating frequency and do away with an IF altogether, if the A/D converter is sensitive enough (which it usually isn't), and if it has sufficient dynamic range (which it also generally doesn't). An analog IF is still required for most practical receivers to supply sufficient gain and to control dynamic range (AGC).

>>> If you want to restrict [yourself] to a radius of 5-10 miles...

Ummm, my son and I just worked two stations that were three grid squares to our north with 10 watts to a single log-periodic beam that was only up about 25 feet -- on 2 meter SSB. Weak signal modes are alive and well on VHF and UHF, thank you. And we could have had these "real radio" contacts even if we hadn't both passed code tests. So while I'm all in favor of the code requirement, the argument that equates VHF/UHF with short-range FM is not valid.

This definition of receiver either stops at the audio signal or at the digital data stream. People can't decode either of those. When talking about either transmitters or receivers we must include the operator-machine translation in both directions as part of the overall complexity of a digital system. Gets a lot more complicated then.

I'd be willing to exchange a CW exam for one which tested for such knowledge, but then we run into resistance from those who hold to the "entrance exam" interpretation of the ham exams. I don't see any consensus for harder written exams. I think I feel the way many do, which is change the code exam for something else if you will, but *don't* just drop it, resulting in yet another reduction in licensing requirements.

>about.

This isn't a birdie. It's a harmonic of the oscillator used in the
Touchtone pad. The pad uses a color burst crytstal as a reference,
and 146.76 is the 41st harmonic of that frequency. That's why you
don't hear it with an external antenna, it's weak, and radiated
by the keyscan matrix of the pad. Getting the antenna away from
the TT pad eliminates it. Standard shielding and bypassing techniques
can reduce it further if necessary (though you need to be adept at
microsurgery to add the chip caps).

Paul,

I passed the 20 wpm test last year using just the code tapes.
Get some good ones (I used the ARRL standard tapes) and then go for it,
morning and evening. I followed along in the book for a while, to
associate the printed characters with the sounds, and then started testing
myself without the aid of the book. Do it each time until you hit your
limit and go a little bit past it. It's one of the most
frustrating/mesmerizing/fascinating things I have ever done. I knew I was
bad off when I started being able to interpret messages from my windshield
wipers...

I wish you success.

>Shape of deployment? Different coax used this time? Combination of
>factors?

Inverted Vee antennas will exhibit a lower resonant frequency, lower feedpoint impedance and decreased bandwidth than their "in-line" cousins. The feedpoint impedance of an inverted Vee is typically around 50 ohms, but that of a standard dipole usually falls around 60 to 65. This in itself could account for the difference you're seeing. You might try lengthing the antenna slightly to account for the new orientation of the legs, but don't be disappointed if it doesn't help much.

Personally, I think any ratio under 2:1 is satisfactory,

73,

Jack WB3U

2613. NOSTS-2 Balloon Launch Sat May 13th

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-09 00:00:00 UTC
From: biekert@phoenix.phoenix.net
Message-ID: <3oomod$nlg_001@phoenix.net>
Source record: 246841

Near Outer Space Transportation System (NOSTS-2)
Balloon Launch - Clear Lake Amateur Radio Club
Saturday - May 13, 1995

The Clear Lake Amateur Radio Club (CLARC) announces the second flight of the Near Outer Space Transportation System utilizing a 16 foot diameter helium balloon as the launch vehicle. NOSTS-2 is an amateur radio experiment which will carry various payloads to an altitude of approximately 20 miles and return them via an 8 foot diameter parachute. All interested hams are invited and encouraged to participate. The launch site will be west of the Houston area (currently scheduled from Wharton Municipal Airport pending cooperation of upper level winds) and the direction of flight will be from west to east. The time window for a Saturday morning launch is from 10:30 to 12:30 AM. Updates to the launch logistics will be made on the Clear Lake Amateur Radio Club s weekly net on Wednesday, May 10th at 8:00pm on the KA5GLX repeater: 442.750 MHz (447.750 MHz input, PL tone 103.5 Hz). Major changes or a launch scrub due to weather will be posted electronically on the CLARC bulletin reflector (subscribe to: clarcblt@mailserv.phoenix.net and on the CLARC World Wide Web Homepage; the URL for this is: http://www.phoenix.net/USERS/biekert/index.html. Before and during the flight a 40 meter net will be operated from the launch site on 7.255 MHz (or up for QRM).

The payload consists of:

* 2 meter packet on 145.79 MHz simplex - GPS data will be downlinked on this frequency for purposes of tracking the balloon and payload package during flight. Radio amateurs operating APRS (Automatic Packet Reporting System) will be able to visually track the flight. Stations utilizing this software are requested to save flight data to file for use in improving APRS software (for purposes of predicting balloon flight courses and landing sites) by our diligent APRS software developers. Other packet stations will be able to determine latitude, longitude, altitude, GPS satellites utilized, and velocity data from the raw NEMA sentences in the downlinked packets. APRS data and raw downlink data files are important to us so we ask that they be sent either to the Clear Lake Amateur Radio Club address listed below or preferably forwarded by e-mail to one of the two Internet addresses listed at the end of this advisory. Because of the importance of the downlink telemetry, the packet station will not accept direct connects nor will it operate as a node or mailbox. However, it will operate as a digipeater. Callsigns for the digi will be NOSTS-2 and KJ5MX-11.

* A 35mm still camera with automatic exposure and film advance. This camera will acquire a picture every 3 minutes on the ascent phase of the flight.

*Beacon on 224.72 MHz for direction finding purposes only.

* A 2m/70cm cross-band voice repeater. This payload is tentative at the time of this advisory. Alternately, this payload will be replaced by a 70 meter digital voice beacon on a yet undetermined frequency. If the crossband repeater is included in the payload package the uplink will be on 147.58 MHz and downlink on 446.15 MHz. Contacts between stations more than 500 miles apart should be possible. Coverage may extend several states beyond Texas and likely will include: Arkansas, Louisiana, Mississippi, Oklahoma and possibly into states adjacent to these. Reception will also likely extend into northern Mexico.

*The Clear Lake Amateur Radio Club Balloon Launch Team wishes to thank Andy MacAllister, WA5ZIB and members of the South Texas Balloon Launch Team for assistance, advice, and use of 220 MHz beacon for this launch.

Reception reports including frequency, time, and YOUR location as well as APRS and raw GPS telemetry data files are encouraged.

For additional information and reception reports contact:

I just bought a brand new Yaesu FT-2200 at the HamVention in Dayton
and would like to know a few things about it.

1) Does anyone know the use of the (P) button on the Mike (MH-27)?
2) Can frequencies be entered using the DTMF keypad on the mike ?
3) Are there any mods for the radio (i.e. Aircraft Xmit)
4) Has anyone used the digital voice recording; is it worth it ?

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 857 7th May 1995

THE FATE OF THE VK1 2M REPEATER AND DIGIPEATER.

THESE WERE BOTH STOLEN OVER THE EASTER WEEKEND. MORE DETAILS MAY BE PUBLISHED, BUT IF ANY AMATEURS OR GROUPS ARE OFFERED THESE ITEMS AT A KNOCK-DOWN PRICE, THE A.C.T. POLICE WOULD LIKE TO KNOW.

I HAVE ALSO FOUND THE CAST ON THE INTERNET AND WAS PLEASED TO READ IT THERE . I NEVER SEEM TO BE AVAILABLE WHEN IT IS BROADCAST, AND I DO LOOK FORWARD TO MY DIGITAL NEWS. WITHOUT VK1RGI, VERY LITTLE DIGITAL NEWS WILL BE FORWARDED INTO VK1.

[Blush... VK2KFU]

CHEERS FOR NOW... (AND TO COL VK2CTD) THANKS FOR KEEPING THE CAST AVAILABLE ON YOUR MAILBOX.

DE RICHARD VK1RJ

EDITORS NOTE -- THIS WAS INTENDED FOR LAST WEEKS CAST, BUT AS WE HAD TOO MANY ITEMS FOR ONE CAST IT WAS PUT ASIDE FOR THIS ONE. IF THERE IS ANY FURTHER NEWS ON THE ROBBERY, OR RETURN TO SERVICE OF THE REPEATER ETC., WE WOULD LIKE TO HEAR OF IT.

IPS WEEKLY REPORT
---
28 APRIL - 04 MAY

DATE OF ISSUE: 05 MAY 1995

INDICES:
DATE 28 29 30 01 02 03 04
10CM 68 68 67 69 69 69 71
A 11 7 4 2 38 35 (21 ESTIMATED)
T 7 9 8 12 9 -8 8

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET TO ACTIVE ON 28TH APRIL, THEN QUIET 29TH TO 1ST MAY. THE FIELD WAS AT ACTIVE TO MINOR STORM LEVELS ON 2ND, REMAINING AT MINOR STORM LEVELS ON 3RD, DROPPING BACK TO ACTIVE LEVELS ON 4TH MAY.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE 10 TO 15
PER CENT BELOW PREDICTED VALUES ON 28TH, AND 10 TO 15 PER CENT
BELOW EARLY ON 29TH. THEN FOLLOWED NEAR PREDICTED VALUES UNTIL
EARLY ON 3RD WHEN FRQUENCIES WERE DEPRESSED TO 25 PER CENT
UNTIL 0700UT, RETURNING TO NEAR NORMAL FOR THE REMAINDER OF
THE WEEK.
FORECAST (05 MAY - 11 MAY)

SOLAR: VERY LOW.

GEOMAGNETIC: 05-08 MAY ACTIVE DUE TO RECURRENT CORONAL HOLE.
THEN QUIET TO UNSETTLED UNTIL 11 MAY.

IONOSPHERIC: 05-08 MAY PERIODS OF DEGRADED HF COMMS ARE
EXPECTED. THEN NEAR PREDICTED MONTHLY CONDITIONS.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

VK2SG RTTY DX NOTES FOR WEEKENDING 28 APRIL 95 (BID RTDX0428)

To those at Dayton again have a good time and when back home
remember that the 1995 ARI INTERNATIONAL DX CONTEST will take
place from 2000z May 6th to 2000z May 7th and this year it is
a special edition to commemorate 100 years from the invention
of the Radio by GUGLIELMO MARCONI.

Exchange: Italian stations will send RST + two letters of their
province. The Marconi Memorial Stations will send RST and the
code "GM" (it means Guglielmo Marconi). Other stations will
send RST + a serial number from 001.

Our thanks this week go to: ZS5S, W2JGR, WB2CJL, AA5AU, PA0HVF,
JF1MGI, I1JQJ and the 425 DX gang, I5IGQ, I5KG, IK5MDF, IK1CJO,
IK5AAX, IK2LEY, F5JYD, and the K5NV and IK5PWJ PacketCluster.

NOTES OF INTEREST:
MALAWI, 7Q7. Peter, ON6TT, has taken up a one month contract as a telecom consultant for the Red Cross in Malawi, starting May 11th. He will take RTTY equipment with him. Listen for 7Q7TT and QSL via ON5NT.

MOUNT ATHOS, SV/A. Peter, KC1QF/SV0GV/EI4GV, and Andreas, SV1BKN will operate from Mount Athos as SV0GV/3 from 6 to 9 July 1995. Emphasis will be CW and SSB but RTTY and Amtor will be tried if time permits.

MOROCCO, CN. Giovanni, I5JHW will be active as CN2GB from April 28 to May 10. During ARI International DX Contest he will use the special call CN5I. Sergio, I5NSR will operate from May 5 as CN2SN. Activities of I5JHW will be on SSB and RTTY, while I5NSR will operate CW. QSL CN2GB and CN5I to I5JHW, CN2SN via I5NSR.

SPECIAL PREFIX, II3CC. During the 100th anniversary of the Radio and the 450th anniversary of the Trento Council and with the Pope's visit, the amateurs of Trento will activate the special station II3CC that will be QRV on all bands from 22 April to 7 May 1995. QSL sent via bureau or direct with SASE to: IN3AHO, P.O.Box 38, 38100 Trento.

CRETE, SV9. Steve, HA0DU, Feri, HA0ET and Laci HA0HW will be QRV from Crete Isl. (EU-015) from 9 to 16 May. Activities with two computerized stations, active on 160 to 10 mtrs bands in SSB/CW/RTTY/AMTOR. QSL via HA0HW.

GENEVA, 4U0ITU. From 6 to 13 May, Wolfgang, DK7UY, will operate from 4U0ITU in CW, SSB and RTTY on 160 to 2 mtrs bands. QSL only via bureau. During weekend of 13/14 and 20/21 May, Mauro IK1CJO, Tony IK1BQT and Luc I1YRL(CW) will operate as well from 4U0ITU all bands CW, SSB and RTTY. QSL to their home calls.

The VK2SG RTTY DX NOTES are available on Internet via Telnet or FTP at ab6z.amp.org. The directory is called /rttynote. For next week's bulletin send your bandpass to Bob, WB2CJL @ W5KSI.#NOLA.LA.USA.NA.

GL de (DX2) Luciano, I5FLN @ ZS5S.ZAF.AF

ARLD021 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, and the QST Contest Corral column. Thanks to all.

COMOROS ISLAND, D6. Adriano, IK2GNW, will be active in the ARI International DX Contest, May 6 and 7, as well as the week before the contest. Adriano will operate mainly SSB on 160, 80 and 40 meters. QSL via IK2GNW.

NAVASSA, KP1. The Navassa DXpedition scheduled for late April is postponed until the last week of May due to transportation difficulties. Al, WA3YVN, of South Georgia fame, joins the team to resolve the transportation problem. He may go with the rest to Navassa.

SPRATLY ISLAND, DU0K. This DXpedition was cancelled at the request of the Philippine military.

GLORIOSO ISLAND, FR/G. FR5HG/E, who has since probably gone QRT from Europa, was heard on 40 meters one morning saying he will return to Glorioso in about 4 months.

SOLOMON ISLANDS, H44. JA1OEM will sign portable H44 April 25 to May 8. Activity will be on all HF bands with CW and SSB. QSL via CBA.

LEBANON, OD. Zanek, SP7LSE, will probably be active for one year, most likely as OD5/SP7LSE.

ANDAMAN ISLANDS, VU7. VU2AU was worked April 21 at about 0200z. VU2JPS is also there and operates mainly CW.

CRETE, SV9. HA0HW, HA0ET and HA0DU plan to be on 160 through 10 meters signing SV9/their home calls from May 9 to 16. HA0ET will operate RTTY and AmTOR, while the other ops handle CW and SSB QSO's. QSL all three via HA0HW.

NETHERLANDS, PA. During the month of May, 27 stations will use the prefix PI45, more quarry for prefix hunters.

Tom, AL7EL, reports having inadvertently supplied the wrong dates for his upcoming DXpedition to Wake Island. The correct dates are May 17 to 24. Thanks Tom.

ARLD020 DX NEWS EXCERPTS

VIETNAM. XV7SW HAS BEEN BUSY WITH HIS WORK, BUT WILL SOON BE SPENDING MORE TIME ON THE BANDS. NEW LOW BAND ANTENNAS HAVE BEEN INSTALLED.

WAKE ISLAND. TOM, AL7EL, WILL ACTIVATE WAKE ISLAND MAY 10 THROUGH 17. PLANS ARE TO OPERATE 80 THROUGH 6 METERS, WITH AN EMPHASIS ON THE LOWER BANDS AND 50 MHZ. QSL VIA AL7EL CBA OR THE KL7 BUREAU.

KERMADEC ISLAND. BARRY, G4MFW, AKA ZS1FJ, HAS OBTAINED OPERATING PERMISSION, BUT WILL PROBABLY BE ACTIVE FOR ONLY A FEW HOURS A DAY. LISTEN FOR G4MFW/ZL8 FROM MAY 5 TO 15 ON 80, 40, 20 AND 15 METERS.

COMING EVENTS

MAY 13TH-14TH VOLTA RTTY DX CONTEST

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President(Col) VK2CTD at VK2XSB, or the Secretary (Pat) VK2JPA at VK2AAB.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2AAB. Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

> how much smaller than the kenwood is it?

I also own a Kenwood 78a. One of my friends just purchased the Kenwood 79a.
Picture your 78a, with 2/3 the length and 1/2 the thickness !!!
You can actually carry it comfortably in your shirt pocket.

The smallest 2m I've seen is the Standard C 108A. It's only got .2 W output though.
Good receive range: 100-175 MHz. It so tiny that it almost fits in my mouth (the radio
is not waterprouf though). One disadvantage is that it does not have a DTMF keypad.

<grin>

Not totally accurate. The majority of packet bulletins have been arriving into VK1 via the gateway for a couple of years now. VK1RGI's loss has meant we have lost connectivity with NSW stations directly. We still get @VK2 bulletins from Melbourne and Wagga.

We are hoping to have the VK1RGI node back up on Mt Ginini before the winter snows block us out.

Carl,
Chairman,
Canberra Amateur Packet Radio Group.

CQ Netters...

A friend owns a PK-900 multimode TNC, he is very happy with
it's performance but he never manages to work the FAX mode ?!
From the looks of things the software supplied by the dealer
does not support or better yet does not recognize the FAX
hardware of the unit !! The software used is the same software
used by the PK-232.
When the dealer was contacted he said that the models are
more or less identical (most propably less) and the software
should not make a difference !!
Does anyone out there have the same TNC ? What software should
be used with PK-900 ? any freeware available ?

Please reply via e-mail to demetre@intranet.gr TNX

Just got back from down south... Dopey me. I forgot my father-in-law doesn't have any PL ability with his rig. :-(

I did find that I was able to get into 145.22 with a HT from Leisure World in Orange Co. to Hollywood.

I also found an interesting 70 cm. repeater... I think it was 447.25. It sounds a lot like 145.29 in the SF bay area. At least those folks have some place where they can congregate and leave the rest of us alone. ;-)

I probably shouldn't have said "no" PL ability... just limited. We
didn't feel like tearing the radio open to redo the diode matrix.
The Kenwood TR-7950 gives you a choice of 3 PL's. His is set for the
local repeaters, usually all he needs. I've got one also, but I'm
going to put in a set of 6 switches for the #3 PL slot instead of
just one set of snipped diodes.

2625. re: Wanted 10 watt army surplus bc band transmitter

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-09 00:00:00 UTC
From: Michael.Black@juxta.mba.org
Message-ID: <ab4_9505091730@mba.mba.org>
Source record: 246853

rilowite@aol.com (RIlowite) is looking for:
"army surplus broadcast band transmitter which ran
about 10 watts AM and was used on army bases for entertainment and
emergency broadcasts to the troops. I need such a unit for the purpose of
helping the hearing impaired members of our church."

I don't think this is going to work, since where's the license going to come from to operate such a transmitter even if you do find it?

INstead of trying to track down a surplus transmitter that might not have been made in large quantity, that you don't have the model number for and which probably couldn't be licensed and can't be operated without a license, better to look at the alternatives.

You could try a "wireless microphone" for the am BC band that is legal there, since it can only have an input of 100 mW or less. The range might not be so good, though. It would depend on the size of the church.

If you're going to wireless microphones, you'd do better to go with an FM wireless microphone, since FM tends to sound better.

A better path to look into would be an inductive loop. Most hearing aids have a switch that selects a mode for use with a telephone. It connects a pickup loop (like you used to be able to buy to record phone calls without making a connection to the phone) in place of the microphone. The signal from the phone goes from the inductor in the receiver of the phone to the inductor in the hearing aid, rather than converting electrical to acoustic in the receiver, and then back to electrical in the microphone of the hearing aid.

With these telephone pickups in the hearing aids, more uses were created for them. The basic idea is to put a loop of wire (I think it's usually a few turns) around the room where you want to distribute the sound, and then feed it with an audio amplifier. The hearing aids in the telephone mode picks up the audio flowing through the loop.

This is good for the people with hearing aids, since hearing loss is not just a matter of things being not as loud, but a loss in dynamic range and in frequency response. Keeping the hearing aid in "the loop" means that the agc and filtering in a given person's aid is not eliminated, which might happen if you switched to radios and headphones. ALso, since the part of the aid that goes into the ear is fitted to the persons ear, they are a lot more comfortable than a pair of headphones.

FOr those with hearing loss and no hearing aids, you could always whip up some battery operated amplifiers fed from a pickup loop, to get the same effect. You could probably scrounge up some old "walkman"-type gizmos that people are throwing out due to mechanical failure, and use the amplifier in them.

I don't have any specific details about the inductive loop, but I have seen articles on the subject over the years. Look in a library with a good selection of back issues of electronic magazines.

Where does it say that it is illegal to have a modified radio that is capable of transmitting out of the ham bands? There is no type acceptance requirement for our gear (except certain external amps) as long as you don't stray from authorized freqs. So what do you mean when you say "illegally programed to operate out of band"?

There are legitimate reasons for having out of band transmit capability. I have used my transceivers overseas where FCC type acceptance is worthless.

Next time you're in Dayton, OH, Listen to 145.110 and 145.190.
None of those examples were embelished to make them sound worse.
Those were all actual conversations. If I hadn't heard it, I wouldn't
have believed amateur radio could get this "dumb."

>73,
>Alan WB2OPA

Gee, I wonder how LogMaster Plus/Plus manages to get advanced
information on changes to the CD formats from Buckmaster ?

Here we are in this thread based upon the fact that Buckmaster has
just changed their CD and left all the 3rd part logging programs hanging
in mid air not conforming to the new Buckmaster format.

None of the logbook software people at Dayton knew in advance of the
problem except for some user reports of problems just days before the
Dayton Hamvention. I know for one (WJ2O) who I told personally had
not heard about it yet.

Buckmaster of all the CD suppliers should have notified logbook
providers of the changes as they have signed confidentiality contracts
with these people before they supply them with the information how
to read the Buckmaster encrypted database.

I wonder what other CD users, software writers, etc had any prior
information on the Buckmaster change or its non-compatability with
any of the logbook or DX Cluster software.

So far it seems like LogMaster Plus/Plus is the only one who knew of
the changes but he wasn't on display at Dayton to show it (hasn't been
for about 3 years as I recall).

In <3oiso3$1igu@usenetw1.news.prodigy.com> AAAT01C@prodigy.com (Scott Press) writes:

>Open 440 repeaters in So. Cal? You must be kidding...

Actually, there are quite a few. If you are that interested, I can get a frequency list together. Let me know if you want me to do this.

>I monitor the 440 band constantly and I never hear anything except for a
>phone patch or 2 a day.

You must be listening in all the wrong places. Many systems are in use, even during the workday, up to 100% of the time. There are some, though, that are not used at all, or only by one or two users. But the important thing is that there is no such thing as a "usage quota" system. Each channel user (system owner) builds the type of membership he/she wants to use the equipment provided by them on channels they are sanctioned to use by the coordinating body in their area. Sometimes this entails not having many users, or those that they do allow to operate on their repeater systems are better at listening than talking.

>I'm compiling data on the 70cm band in So Cal (no thanks, got plenty of
>help)
>to eventually bring SCRBBA to it's knees for the monopilization of the
>440 band with closed and private repeaters. Were starving in SO CAL
>(especially Los Angeles) for repeater space and eventually something has
>to give.

Have you considered 1200 MHz? You should be able to find a channel or two up there.

>Perhaps we should just throw the coordination that SCRBBA claims to
>maintain and just put up our own 440 repeaters that will be used to
>communicate, not just occupy a space in the band plan without any real
>use.

It'll be difficult to bring the main coodinating body to its knees. Many have tried, without success. Besides that, SCRBBA does a pretty good job at technical coordination. And that's partly because *it is* mostly a good ole boy network.

As for your idea to "just put up our own 440 repeaters",
my guess is that you are a recently licensed amateur, and that you never went through the "repeater wars" of the mid-1970's. Two meters was a band of near total anarchy in LA, and has never really recovered. It did not benefit from this kind of thinking, and neither did those who wanted to use it, at least in SoCal. If I'm wrong about your being recently licensed, I apologize in advance.

The growth in the last 20 or so years of usage on 440 MHz in LA is partially due to those hams who didn't want to put up with the above. They're not about to sacrifice years of effort to squish in co-channeling, and the resulting interference, not

to mention crowding. And many of them are involved with SCRBBA, either as advisors or as members.

>We really should start a movement (or revolt) and form our own
>coordination body for 440 (tis legal) and get 440 back into a usable
>state instead of a stagnating pile of OM repeaters and get rid of the
>good ol' boys network.

It might be more productive to approach SCRBBA with your complaints than to start up your own movement or revolt. Many of your thoughts are not new, but it doesn't pay to __not__ try and change things. Who knows, your ideas may appeal to someone on SCRBBA, and some reasonable compomise may be possible.

>These people think they "OWN" the spectrum, but, believe me, things are
>going to change, one way or another.

By and large (my sample), "these people" know that they do not own the (UHF part of the) spectrum. They are its custodians and users, and have established a method for dealing with crowding, and frequency/area coordination, None of that excludes you from applying for membership in any system, nor does it keep anyone else out.

Source record: 246862
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I am in the market for a marine VHF radio for my watercraft, but all the catalog says is that they are VHF, and that they recieve 88 chanels and transmit on 57 channels. What I would like to know is:

? What is the specific frequency range of typical marine radios?

? Do they transmit/recieve in AM or FM?

? What is the frequency spacing of the channels?

The specific brands I am looking at are Icom, Apelco, Humminbird, and Shakespeare.

I would like to apologize in advance if this is not the correct forum for these questions, but I am rather new to this.

Any info is apreciated.

Doug,

Although not strictly an "electronics" museum, The Danish Post and Telegraph Museum across the street from the main Post Office in Copenhagen certainly qualifies as one of the world's best permanent exhibits of the 19th century precursors to the electronics age!

In addition to its extensive collection of Post Office related items, its collection includes many 19th century semaphore, electricity, Morse telegraphy, printing telegraphy, submarine telegraphy, telephone and Marconi wireless spark telegraphy items.

There are also many early 20th century radio items including huge arc transmitters from Valdemar Poulsen's spark transmitter laboratory. Poulson designed spark transmitters with output powers up to 1000 KW before 1910! Large shortwave radio broadcasting transmitters from the 1920s are also displayed.

North Island or South? The ARRL has a nice package on visiting NZ,
including a list of hams who participate in the International Travel Host
Exchange. Included in the package are two maps showing repeater
locations and freqs. Unfortunately, I've lost my map for the North
Island, but I do have the freqs-just no locations since the map is legend
is keyed to a number system, not names.

Offsets are the same as in the States

Simplex calling 146.475

There are 31 repeaters divided between the two islands.

Freqs are 146.625
650
675
700
725 you see the pattern
through 146.975
and 147.00 through .375 spaced the same way.

Enjoy! If I could go anywhere and be an expat for the rest of my life,
to would be the South Island of the land of the long white cloud.

: > a fluorescent light or a dimmer.

I thought I'd point out that the QST article talks about AC hum
generated by the *antenna system* changing, as opposed to being
generated by an interference source. The diodes in an AC power
supply turn on and off, and change the contribution of the AC
lines to the antenna system. Thus, you only hear the hum
on relatively strong stations. On the other hand, interference
sources like lights or dimmers wreak havoc on weak stations,
and can be heard even when you aren't tuned to a station. It
can be awfully difficult to find an interference source that
isn't there...

I am presently taking a course to obtain my amateur radio license and I am looking for any programs that can tutor or decipher Morse Code.

Please reply via e-mail to irimie@sfu.ca

web sites or ftp locations would be appreciated or simply the names of the programs.

thanks in advance
Irimie

-->POB 88
-->Powder Springs, GA 30073
-->73, Ed, K4SB
-->

Ed,

I dont understand how the 4th area could contain only 80,000
available calls.

For example, it appears that there are no 2x3 calls
in the KF4*** and beyond. For KF4*** there are 26*26*26
callsigns = 17,576. If you add up just KF4AAA through
KZ4ZZZ is over 300,000. Then there are N*4***, W*4***,
A*4***, N4***, K4***, W4***, W4**, K4**, N4**, etc.....

How did you come up with only 80,000 available?

(I realize that small exceptions like KP4, KG4 exist, but
it isnt clear you cant pick even those for vanity call)

I seem to have made a mistake. A few weeks ago I asked for a ARRL repeater list on disk. Being a old timer on the net I had forgotten to ask for the list on a UINX file system. This mistake was made out of habbit. All of the AOL accounts that have been sending me information on DOS/WIN CDROMS, please stop now. Please don't get me wrong, I am not mad at these folks. I know the only world that they have ever known, in some cases really don't know, is the windows os. If I can make only one point, please don't assume that everyone is using DOS/WIN.

Once again it was my mistake. Thanks for reading.

Yes, and I've worked California from here in Hawaii on 157.15 MHz
during tropo duct conditions but I wouldn't consider that a regular
and reliable path.

Looking at sales I beieve it's safe to say that the majority of
VHF radios on the air are HTs (= short range) employing FM.

gray@feline.gts.org (Kelly Gray) writes:

>... but how does this justify requiring one to know code before being
>permitted to use the HF bands?

Yes, as long as CW is permitted from the lower to the upper band edges
on every band you should be required to know code. If you initiate
a call and there's an underlying CW QSO in progress you'll be told
QRL PLS QSY OM in code. You'll be expected to understand and comply.

> The simplicity and low price of CW equipment
>makes it a very attractive choice for those on a budget, or those wishing

For the beginner in building (never held a soldering iron before) CW
provides a wonderful way of getting on the air with little effort.
What one learns from building that first transmitter and operating it
just can't be measured. And in doing so he will certainly be fulfilling
Part 97.1.

I have posted all available 1x2 and 2x1 callsigns for all 10
areas on my Radio Devices WWW homepage. Just click on the
call district you want and the file will be sent to your
web browser. Then just use the FILE-->SAVE option to save
them out to your hard drive.

They are also posted on Compu$erve in HAMNET in the
FCC & Regulatory Library. I can be reached there for
comments at 74504,1273.

This data is at the bottom of the page in the "Under Construction"
area, but it appears to work just fine now. Bug reports welcome
but not desired.

Anybody have any mods on this radio? I did the keypad mod to expand the RX. It now will display down to 50MHz and up to 999 MHz. However it does not seem to RX anything in the 800 MHz area. I had a FT-530 that worked great in 800, so I am hopeing that this one will too. Any mods including TX would be great!
Thanks

How about one possibly being the angle of the "V" which acts on the impedence of your dipole.
You may possibly have roofing nails and other metallic "stuff" that your antenna may be interacting with.

There is nothing "wrong" with a 1.5:1 SWR. The person on the other end of a communication will notice NO difference in relative signal strength whether you had a 1.5:1 or a 1.1:1...

You might try some good books on antenna theory to help you out. One good one, for starters,
might be Lew McCoy on Antennas. I think he did a good job of making it very readable and understandable.

Bottom line is: Don't worry, be happy!

: How about active versus passive matrix? Color versus monochrome?

I was wondering how much of a problem would remain, if one were to build
a metal enclosure, and include the LCD portable inside, open at the
front of course! Certainly LCD based equipment would be easier to do
this for than normal full sized monitors.

But even for a full sized monitor, how would a metal enclosure with
aluminum screen on front be? The screen mesh would be a pain to view
through, but it really depends on how important, how long and how much
reading is actually done from the tube while operating.

The biggest source of noise in my experience has been on the power
lines! With the equipment now all using switching power supplies, the
cheaper the equipment, the worse the noise, it seems. I had a night and
day difference swapping out the power supply in my PC, when the original
had failed. Presumably, you've already taken steps on the power line?

>>Shape of deployment? Different coax used this time? Combination of
>>factors?

No doubt a combination of factors, which may include the proximity
of wiring in the attic or ceilings just under the attic, the type of
insultion used on the walls just below the attic (i.e., plain old
fiberglass vs foil-backed foamboard), the possibility of copper water pipes
in closer proximity, the location of attic fans, a/c condensors, or anything
else metal, and even the type of roof gutters (plastic vs metal) and
soffet coverings (wood vs metal). And, of course, the *impedance* of
the coax you're using (assuming it's not a "flat" line, i.e., perfectly-
matched at the antenna) and the shape of the antenna will also affect
it.

For example, in my attic I have a full-sized a/c condensor unit
& fan, metal gutters, and metal soffets, all of which affect the optimum
location (and VSWR) of my attic-mounted 5/8-wave 2-meter GP. I'm sure
an attic dipole would be similarly affected. In fact, I'm sure it *does*
affect my G5RV coax run which passes through the attic before going out
to the coax to ladder-line transition. (BTW, the GP is in the attic
because it's only for emergency use on local repeaters, i.e. Skywarn;
I hate "antenna clutter" on the roof).

>Inverted Vee antennas will exhibit a lower resonant frequency, lower feedpoint
>impedance and decreased bandwidth than their "in-line" cousins. The feedpoint

<snip>

Everything Jack sez is quite true.

>Personally, I think any ratio under 2:1 is satisfactory,

I tend to agree with Jack; after all, 2:1 is only an 11% reflection.
However, in fairness to Ron, a lot of modern transceivers recommend
operating at a VSWR of 1.5:1 or less at full power so that may be one
reason for his concern.

I'm old-fashioned, I use a tuner on every band with a "tuning chart"
for quick "pre-setting." At VHF/UHF I sweat the VSWR because line losses

are significant, but at HF the losses are trivial so as long as the transceiver is happy (i.e., looking into <1.5:1 at the tuner input) I'm happy.

2663. is there code tapes for 35wpm ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-09 00:00:00 UTC
From: SYJERRY@duq3.cc.duq.edu
Message-ID: <3ons3b$t0k@godot.cc.duq.edu>
Source record: 246909

I just recently passed my extra. so theoretically, I can copy 20wpm in an ideal condition. but in reality, I have to deal with a lot of qsb and qrm, and the hardest part is people sending with uneven spacing (usually from straight keys sending at 20wpm). so I am having a hard time copying during qso's.

I find though, that copying 13wpm is now very easy, no matter how bad the code is sent. so I was wondering if there are code tapes I can use to up my speed to 35wpm so I can copy 20wpm code sent badly.

I recently got the KB6MT words tape, which does 35wpm for only 30 minutes of the 3.5 hour tapes, so I want to know if there are other code tapes out there for higher speeds > 30wpm.

thanks

At Dayton there was a reappearance of Collins Radio selling some neat software, "Propman version 3.1 ". This PC software (Propman is short for propagation manager) can predict the HF progation between any two points on the globe with some basic information entered by the user. It runs well on a Gateway Pentium 75, plotting best frequencies to use for a given path, sunspot cycle etc. The results are remarkably acurate based on the experience of prediction and actual on the air results over the short time I have used it. At $ 49.95 it's a bargain since it was actually originally developed for the US military costing who knows how much to develop. I usually don't get excitied about software, but this package is the greatest since it really takes the guess work out of what paths are likely to be open for given locations. In this down period of the 11 year sunspot cycle any help in working DX is a plus. Also, it is copy protected. It runs at a snails pace on a 286 (takes 15 minutes + to make one plot, but takes seconds on a 486 and even less on a Pentium. With a 386 you need a math co-processor.

BTW, I don't get any commission for software sales.

Karl, you need to change "routinely seize" to "once in a blue moon seize".
FCC enforcement in this area is so lax as to be nearly non-existant. That
doesn't mean you're wrong about it being illegal though.

Our club, W1KBN, has an ICOM IC-2400A mobile, which we've had for a few years. I'd like to find any out-of-band receive mods for either band (2m and/or 70cm).

Thanks for any help.

>440MHz, and 23cm ham bands for voice (phone) communications?
>
>10 Khz seems common, but is that the case on all bands? I realize
>beacons are many times on 5 Khz spacing, maybe CW too.

2 meter channels for the 146 MHz and 147 MHz sections of the band in most of the US are on 15 kHz centers. In parts of the US, they are on 20 kHz centers. In the 145 MHz section of the band, they are on 20 kHz centers. That's for repeaters and recognized FM simplex channels. In practice, however, simplex operation occurs anywhere the operators like, and the granularity of the radio determines the minimum channel step. That's usually 5 kHz for most radios.

On 440 MHz, the channel spacing is 25 kHz, but FM simplex similarly may be on any 5 kHz step.

For SSB and CW operations, all bets are off. Those operations aren't channelized, and step size is purely a function of the radio, usually 100 Hz, but on some radios 10 Hz or even 1 Hz steps exist. Radios with older analog VFOs have essentially infinite granularity. In practice, of course, stations tend to space themselves out so that their spectrums don't overlap.

2669. Dipole antenna--shape and SWR

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-09 00:00:00 UTC
From: Wayne_Estes@csg.mot.com
Message-ID: <9505091000.ZM25763@SALCIUS2>
Source record: 246915

The characteristic impedance of an inverted Vee is about 50 Ohms, resulting in an SWR of about 1:1 with 50 Ohm coax.

The characteristic impedance of a flat dipole is abobut 75 Ohms, resulting in an SWR of about 1.5:1. This is still a pretty good match. I wouldn't worry about anything less than 2:1.

If the tube is color, and uses a shadow mask, IE isn't a Sony Trinitron, then its face is already effectively shielded. If the tube is monochrome, or a Trinitron, then fine wire mesh, painted flat black and and installed against the tube, will form an effective face shield, and serve as a glare filter in the bargain.

Where you have to concentrate your shielding is around the plastic case. You can either use metal, or a conductive spray. GC markets a spray that is effective.

Next time, try this one: The Rio Hondo machine in Pico Rivera
146.175 MHz + 600 KHz. No PL required. However, a PL of 141.3 will
turn on the extra preamp.

We are looking at getting 3 handheld units to be used around a school campus for a few students, we can not use the distric radios for this, we have a small budget, looking at around $200 per unit... I have been looking at the following 2 radios that are at Radio Shack, the VHF-FM business transceiver, and the UHF-FM personal transceiver. They both are 1 watt, I like the UHF one a bit better because it is smaller... What is the FCC licenseing cost on the business one ? Because these would also be used in a room that we use wireless mics in, I kind of like the UFH one better, because our mics are VHF, don't need any more crap on those... I guess my main question is, the school is about half brick, it is only a high school campus, not huge, what would be the top performer ?

GC>Of course there is also the shareware APRS program. You have to cook up
GC>your own maps, and there are only a limited number of points you can have
GC>on any given map, and the user interface is, to be kind, user hostile,
GC>but the price is right.

Gary Gary why do you say that APRS user hostile?. Are you a regular APRS
user?. I have been running APRS since version 1.0 and the latest is
version APRS68b.zip. I don't find it user hostile at all, it does require
a certain amount of learning like with any sofware. We have made our own
local maps in many cases down to street level. Most of our maps are
digitized using a tablet and the APRS Mapfixer program. If you more detail
or an easier way to make them the's always the CD-Rom route. We use APRS
for many things including Weather, DF'ing Keyboarding, Tracking Etc.
We have several weather stations up and running and see many through HF
gateways all over the states and Canada. The user interface from APRS
to GPS is very very simple, just hook the GPS with 2 wires to the TNC
and APRS does the rest, Gary if you find hooking up two wires to be
Hostile then i agree. The person you answered to was looking for a program
to interface to his GPS and Laptop (I thin APRS is great for that) unless
he is willing to shell out $750.00 for the Delorem CDrom version.....

2679. Motorola Radius P110 questions...

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-09 00:00:00 UTC
From: allenw@teleport.com
Message-ID: <3ood58$64f@linda.teleport.com>
Source record: 246925

I recently got a Motorola Radius P110 Bizness HT. I now have a few
questions about the unit.

1) How can I retune it for the 2m HAM band?

2) The radio has two channels right now, I have heard rumor that there
are actually SIX channels in the radio. Is that correct? what other
features does this radio have? Split freq. ? CTCSS en/decode?

3) Can I SOMEHOW put in a DTMF tone board?

4) the Batt is 7.5 v but I don't have a charger... what options do I have
to charge it... what does it want in other words... there are four
contacts on the back of the batt. what should get connected where?

5) Any comment good or bad about the radio? I have heard the audio qual
in the ham band without retuning is rather poor.

6) ???

Thanks a million,
KC7FFX

Your last guess is no doubt the right one - all of the above. I used an attic antenna for several years and I believe that one of the most sneaky problems is the presence of resonant or near-resonant pieces of wire or plumbing nearby. Aside from the SWR issue, they can really distort your radiation pattern without it being very obvious. If you find you work out well in some directions but not in others, suspect that.

Actually, an SWR of 1.5:1 is not too bad, as long as your transmitter will load to full power. If you reduced it to 1:1, you'd see very little difference. Have fun with it - I earned DXCC with mine!

> attract interesting people to you, just like your CB'er "buglight" theory. If you can't find intellectual and
> social gratification on the airwaves - find it elsewhere. No one is _forcing_ you to be on the air.

I think what happens is that there are a lot of people like me who monitor just waiting for someone to chime in and get an interesting topic started. We never hear it so we remain silent. We also don't want to do a CQ and get some low-life simpleton on the the other end. Believe it or not, I have received a number of e-mails from people who'd like to talk to me on the air so I guess (1) there ARE people who share the same view of some hams in my area and (2) They reacted the same way, staying off the air because they just didn't like what they were hearing. I'm going to a club meeting soon to hopefully meet some of those silent hams.

I'm not looking for social gratification via radio. The people who rely 100% on radio for social interaction are the ones I hold in contempt. The issue wasn't that I was being forced to be on the air but rather that the conversations I have found there have been a major disincentive to get on the air and have probably made a negative impression on young hams. Amateur radio is not supposed to be a social replacement for the telephone. "Blah blah blah got married blah blah my corns are killing me blah blah blah we went to Frickers and ate 48 chicken wings blah blah blah."

I heard a chat with a new ham asking another how he was hearing a guy from Philadelphia, PA on his 2m HT. The other ham explained that it was a 10m transmission that was being simulcast on 2m. He was very patient and eager to help the new ham understand how it was done. THAT's what people need to talk about more often.

Like I said, if people in your area are intelligent and exciting than they are here, that's great, but I can't imagine anyone being defensive toward my comments...unless they were a boring ham. You aren't a boring ham, are you?

In the meantime, I've erased a few repeaters from my HT's memory so that the scan will (hopefully) seldom stop on a conversation about peanut butter pies or kidney stones.

From the preceeding post, I infer that it is now illegal to possess a ham radio programmed (or modified) to operate out-of-band. Is that what you are really saying?

You're saying that a commercial radio can be programmed for any frequency
on which it is type accepted and its operator is licensed, but that you
can't enable operator entry on the front panel for commercial bands. It
seems it should still be legal for the operator to put the jumper in place,
program whichever frequences they need, then remove the jumper before
operating the radio. Or are you saying that it is illegal for a consumer
to program their own radio? If so, who is permitted to program a radio?

QST de W1AW
ARRL Bulletin 50 ARLB050
From ARRL Headquarters
Newington CT May 9, 1995
To all radio amateurs

SB QST ARL ARLB050
ARLB050 Rules changes detailed

The FCC has issued a Notice of Proposed Rule Making on several changes in amateur service rules announced last week.

The FCC proposes to designate one volunteer examiner of a team as the examination session manager, saying that would increase ''examination efficiency.'' The FCC said that continuing to require at least three VEs to be present would preserve the protection of cross-checking, as sought by the ARRL.

The Commission also proposes to give examination credit to former licensees, as requested by the ARRL in RM-8418. The FCC said the League's position had merit, and the proposed new rule would allow VEs to give exam element credit for any exam the applicant had previously passed. In addition, the FCC asks for comments on criteria ''it should use'' to allow credit on amateur exams for other types of formerly and currently held US operator licenses and foreign licenses.

The FCC also agreed with the ARRL proposal in RM-8462 that bona fide Amateur Radio clubs should comprise a minimum of four people in order to be eligible for a club station license and proposes a rule to that effect.

In response to an ARRL request as part of the vanity call sign program, the Commission proposes to make one-by-one call signs available to special event stations. Requests for such call signs would have to be made 120 days in advance; the period of the special call sign would be 15 days or for the duration of the event, whichever is shorter. The application would have to state the nature of the event and include a list of requested call signs in order of preference.

Finally, the FCC also proposes to allow portable indicators to be included before, after, or both before and after, the assigned call sign. This was, the FCC said, in response to several informal requests for clarification of its rule 97.119(c).

The comment deadline for these proposals, in WT Docket 95-57, is July 14, 1995. The reply comment deadline is August 14, 1995.

2693. Legal call format?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-10 00:00:00 UTC
From: dale@sequent.com
Message-ID: <1995May10.173652.14059@sequent.com>
Source record: 246739

I have a question about the legal 7-land calls that are 1X2 and 2X1
format (4 characer calls). I upgraded and wondered what available
calls there were for 7-land.

To figure this out I pulled the call signs from the QRZ CD-ROM and
extracted all 4 character calls with a "7" as one of the digits.
I thought I would generae a little program to show me all calls
excluding those in this list.

I expected the pattern space to be:
A7xx", Ax7x", "N7xx", "Nx7x", "K7xx", "Kx7x", "W7xx", "Wx7x"

But did not find any "A7xx" calls. Also no calls after "AL7x".

I know that "KL7" and "KH7" would be Alaska and Hawaii, but because
of the entire groups missing I suspect that there are some other calls
that are not issued -- or maybe were not issued at one time and will
be issued now?

I suspect that either I lost some calls when I pulled them from the
data base (I did a little re-formatting) or I don't fully understand
the legal call set.

Anyone out there that knows the full specification for 4 character
7-land calls?

Is August for gate one (clubs) or for all the rest of us?
Did he give any reason for the delay?

I've heard a bank in Pittsburg will be the gatekeeper. I wonder
how they will fill the requests once they start the program. How
will they resolve conflicting requests?
I asked this question on this group before and no one really knew.
I'm wondering _how_ the gatekeeper will do their job...

On a related topic, about a year ago I vaguely remember a thread
about the theoretical number of callsigns available by license class.
Since I upgraded to extra in January, I have been waiting to see if it
comes up again. Does anyone remember these calculations or
have posts from a year ago that show how many callsigns
are theoretically available?

Curtis, I agree that direct FCC enforcement has been lax, but when
illegally modified radio equipment is found, it is impounded. It happens
with very little public fanfare, just like all the money/cars/homes that
are impounded as a result of drug busts, etc. In fact , US Coast Guard
(Great Lakes-9th District) impounds radios found during routine inspections
if the boat owner cannot also produce a valid FCC license for same. It's
illegal for boats over a certain size to be on the water without a radio,
but you must have both a legal radio and a license.

>
> Where does it say that it is illegal to have a modified radio that is capable
> of transmitting out of the ham bands? There is no type acceptance requirement
> for our gear (except certain external amps) as long as you don't stray from
> authorized freqs. So what do you mean when you say "illegally programed to
> operate out of band"?

The FCC Rules, Parts 2 and 15, since you asked! Although there is no type
acceptance requirement for home-built amateur equipment, if the radio is
imported into the US, there IS a requirement for FCC approval. And the FCC
prohibits the manufacture, importation, and sale of equipment which is
capable of being operated in the Part 90 public safety / commercial /
business band unless it is type-accepted. One of the restrictions is that
the operator cannot adjust the frequency externally, except to preset
frequencies using a channel selector switch. This automatically eliminates
any radio that can be programmed by the user from a front panel keypad,
including the generic Yaecomwood 2M HT.

>
> There are legitimate reasons for having out of band transmit capability. I

> have used my transceivers overseas where FCC type acceptance is worthless.
>

We are referring specifically to 2M HTs, not to HF rigs operating below 30 MHz. I would assume that you also verified that the rig you used was legal and acceptable under the regulations of the countries from which you operated. As long as you don't leave the out-of-band features enabled when you return to the USA you're OK. When you come back in through customs, they can legally impound your HT and fine and jail you for bringing in a radio that is illegal to possess or sell under the FCC rules.

Heh, I've got one of those. I did the switch trick too. By the way, did
you change the PIN diode in the TR switching? There is a service bulletin
on the Kenwood BBS concerning intermod problems in the front end. It was
driving me nuts with mix of Channel 2-TV and KUSC (105.5?) creating a
mix right on top of the packet repeater I was trying to use.

Brian,

Why does your e-mail bounce? I tried to take this off the news group but the mail bounced.

I quoted your entire post less the header. At least all that got to me.

They should pull Glen's ticket for broadcasting, interfering with communications in progress, interfering with an emergency net. If what the Georgia emergency net alleges is true about being given two hours to get off "his" frequency he doesn't deserve to be called ham gentleman or anything other than "the operator formerly know as K1MAN".

I am sure you and Glen have some guard house lawyer rational why he should be allowed to be a broadcaster on the ham bands but I don't buy it. This kind of crap is going to end up in actions that will be detrimental to the majority of hams.

I have read his packet postings and when propagation was right heard his broadcasts. All of it is self serving ego stroking nonsense.

I urge the concerned amateurs to write the FCC asking for engorgement of rules. If the rules aren't clear enough for Glen then perhaps they can be clarified. I suspect many of the other innocent bystanders in this would support a stronger broadcasting rule and a specific exemption for W1AW.

Enough on the news group. My e-mail address is posted you can reply there.

If you have read the various threads over the past few years concerning the RS 202 handheld, you'll find that they have many problems. Not every radio, but a number of them. Some hams have reported returning their radios four and five times. Seems there must be a real quality problem with these radios.

So it is not surprising that the radio is displaying some interesting problems for the owners.

I was asked to repost replies to my request on advice for mobile dual-banders; here 'tis! Thanks again to all who offered help. We still haven't bitten -- we'll wait to buy 'em until after my wife passes her Tech, so if you have something to say about your dual-bander, please email me!

John:

Our club here at work bought such a rig to use for an emergency communications setup (i.e., there's an earthquake, the phones are down, and we need to call for a fire truck; (we're out in the country))

Our primary consideration was ease of use, as we'll probably not use this radio very frequently, so we needed something we could figure out without a manual, at least for the basic stuff.

We wound up getting an ICOM IC-2340H. It also has the attraction of the ICOM service center in nearby Bellevue, WA.

The radios we looked at were:

Icom IC2340H, Yaesu FT-5200, Standard C5718, and Kenwood TM-733A.

We've only had the ICOM for a couple of weeks, but so far I really like it. It's relatively easy to use, the duplicated controls for VHF and UHF make it easy to tune and control. We are also across the street from a fairly

high powered UHF pager transmitter, somewhat notorious for causing
intermod problems. We haven't yet heard any intermod of significance
on the ICOM from it.

A personal note on the Kenwood: playing with it in the store, I got
it locked up solid, just trying to tune to a memory channel. So locked
up that the salesman had to cycle power with reset depressed to unlock it!
I did not find it's user interface at all intuitive.

The standard was also fairly unfriendly I thought; *All* the controls are
on the microphone, and I just looked at it in confusion for a minute and
put the mike down.

I did a score sheet on the radios we looked at, and here it is:

Wt Icom Std Yaesu Kenwd
3 Ease of changing bands 4 2 3 3

3 Ease of recalling and setting memories 4 1 2 1

3 Ease of direct entry of frequency (VFO) 4 2 3 3

3 PL tone stored with memory channel 4 4 4 4

2 Automatic determination of repeater 4 ? 4 ?
splits with frequency

3 Ease of going simplex 3 2 3 2

1 Back-lit keys and functions 3 2 1 4

1 Head set and mike

2 Ease of power output change. 3 3 4 4

3 General ease of control use. 3 1 3 2

1 Dual in-band recieve (listen to 2 2m 0 4 0 4
channels or 2 440M channels at once.)

1 Auto-mute of un-selected band 0 4 0 0

2 Built in diplexer 4 4 4 0

Score: 87 64 75 65

Hope this is of some use..

I just went for the Standard 5718. I really like it; especially the way

that you can control the entire rig from the display mic. When parking on the street, I just put the mic under the seat with the radio and no one know's it's there (besides the antenna on the car). The expanded receive is the widest on the market and the thing is packed with features.

Hi David. I have two Yaesus mobile dual banders, an older FT-4700 and a newer FT-5200, both in current service. I choose them both for the remote mount capability of the front panel. It is the only way to get both bands neatly installed in a modern auto with a center console. It allows for a real slick installation. Both rdios have been flawless. The 4700 is mores than 4 years old. The 5200 is about 18 mos old.

I have heard that the Alinco radios are very subject to intermod interference. I can tell you that the Yaesus that I own are not immune either when in high RF areas such as NYC. Some of the dual banders need an external duplexer if you plan to use a single dual band antenna. That costs about $50. The 4700 needs one, the 5200 has it built in. There are pros and cons to both scenarios. If you wish to run an amp on only one band, the external duplexer allows you to do that in only one bands feedline. If inetersted in that, be sure to get a duplexer and antenna of suitable power. There are some dual band amps, but mostly lower power than I usually use. I prefer the Diamond line of mobile antennas.

Good luck,

Tom

I have Kenwood TM742. I bought it because I already own a Kenwood TH78A. Also, a bunch of my friends also have Kenwood; that makes it easier to learn from each other.

In general, I like the radio. There is no particular point I dislike about it. I live in L.A. Intermod is generally not a serial problem for me, may be I am not in the most series area. When I do experience intermod it is generally in the 440 MHz band.

One nice feature about TM742 is that you can add a third band, such as 220 MHz, 50 MHz, or 1.2 GHz.

David,

I will tell you about which radio to purchase but please send me all you comments because I am also interested on what others have said.

Personally I would purchase the Yaseu FT 530. The Kenwood TH series has great audio and features however it is a bit finnicky and not very robust and Kenwood is very expensive to repair. The Icom W21A has lousy audio but a very capable rig. Good receive capabilities form about 100MHz to 900MHz.

The Alinco is also not a bad piece of gear however the current models do not seem to be put together as well as the others.

Regards,

Len Spain

David,

I'm using a Kenwood TM-731A. I've only had one problem with it that I hope is cured. If I needed another mobile rig I would consider another Kenwood. If you need a Duplexer I recommend a Larsen. If you purchase a duplexer, especially a Genisys, I would check it against it's performance specs.

If you're thinking of using DSQ encoding/decoding check to see if any repeater you might be using will pass the DTMF tones. The ones around Kansas City often do not. The repeaters I worked on decoded the DTMF,filtered it out, regenerated it cleanly to the phone lines, then kept it from being re-transmitted. Not only did this give more reliable switching, it keeps those monitoring from decoding DTMF phone numbers.

Good Hunting,
de N0USP

Hello there. Thanks for reading this. I spend most of my time operating mobile on HF. I will be in some sorta rare California counties in the next month. I was wondering if there was a specific frequency that county hunters hang out on. I know that IOTA is on 14.260 etc. Doe's anyone know if there is a certain frequency or frequencies that I should be listening to? Any help would be appreciated. Please reply to me directly at n6rpl@ix.netcom.com

gary@ke4zv.atl.ga.us (Gary Coffman) writes:

>This is simply wrong. Ask yourself this question, why doesn't NASA
>use OOK Morse encoding for its deep space probes?

For the same reason the police don't use EME. Different situations require different modes of communications. 2M FM is great for across town and CW is the perfect mode for across the hemisphere.

These exotic modes that you dream about are neither affordable nor common amongst the world's hams. Thus, in the meantime we'll keep encouraging folks to use this simple yet effective mode. It really has no equal in that one can spend an afternoon building a transmitter and work the world that evening.

>It's true that a OOK Morse transmitter is no more complex than a
>FSK transmitter,

Everytime you state this you forget to mention the complexity of the FSK keyboard. I can make a handkey in 5 minutes.

>but the receiver, oh my, to be effective the
>receiver needs the complexity required for SSB.

I've got dozens of well-designed receiver circuits in front of me; any of them could be built in one day. That evening I'll be decoding Morse via my ear - what are you going to build to decode FSK signals?

>This is a red
>herring, however, since there are single chip solutions for all
>these modes

And Brian will think a single chip is `building from scratch' (heehee).

>(albeit currently of less performance than more complex
>designs). Nonetheless, the simplest receiver suitable for OOK Morse
>is also usable for some other digital modes.

A CW receiver ends with it's speaker/headphone; decoding is done aurally. But you still haven't mentioned how you're going to decode the modes you've mentioned.

Holes can be shot in the remainder of your post but I've got work to do!

When an almost complete receiver is packaged in one chip, that no
longer falls under the catagory of building from scratch. You've
probably grown up with nothing but chips so it's difficult for you
to comprehend what building from scratch means. And I'm only 41.

>Dana, you should know better than to rise his flame-bait. The readers

[The President's Address included a summary of the new regulations, which is too long to place here; it will appear separately.]

Divisional news

Divisional news

Most members will have received by now the May issue of Amateur Radio magazine. Included with this month's issue is a nomination form for the coming annual general election. Those of you who are on a membership-only subscription will receive their nomination forms through the post sometime this week.

The Council of the WIA needs workers - what we don't need are seat warmers. After two years of unrest the Institute needs to rebuild itself. To do this requires willing workers.

Is that you?

If you are prepared to attend perhaps, two monthly meetings, if you are prepared to devote one full day per month to Institute affairs - and that need not be all on the same day - then your Institute needs you. It's not to say you'll need to spend that time working as a councillor, what the Institute really needs is commitment. The time factor is, of course, an unknown.

The extra meeting could be a committee meeting. These committees will cover all facets of our hobby and make council meetings shorter. This would mean that council meetings will become more like club meetings - that means more amateur radio.

This new concept is yet to be agreed to by the incoming council.

Be a part of it - give up chin-stroking - forget being an armchair strategist. Your Institute needs you.

Nominations close on 20th May - make sure your nomination is in before the closing date.

Now, if you need a form, call the Parramatta office without delay.

Magazine Round-up

Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the May issues of the various magazines.

"Electronics Australia" carries the promised apology from Jim Rowe; an historical item describes how television was used in Melbourne in 1930; beginners can see how diodes are used in some simple circuits; a switch-mode battery charger, based upon a single hex-inverter is described; and a project to enable mains appliances to be switched via UHF remote control is completed.

"Silicon Chip" describes how modern vehicles are RF-proofed, an important consideration in computer-controlled cars; a satellite receiver kit is introduced, along with some theory of reception; a mains-borne transmitter and receiver system is described; the FM radio trainer is concluded, along with a simple IF alignment oscllator; and a low cost transistor and MOSFET tester, able to drive power transistors and Darlingtons, is built.

"Amateur Radio" build a Twin Crystal Filter SSB/CW transceiver in a modular construction for 40m; the analysis of the "L-Match" is concluded; an argument for abolishing the Morse Code requirement is presented; a simple super-regenerative receiver, suitable for beginners, is mentioned; a passive LC filter for CW is constructed; and a simple crystal harmonic generator, suitable for tuning receivers, is built.

"Amateur Radio Action" describes how to end-feed a dipole with co-ax cable; the "log-yagi" antenna is described in detail; various SSTV modes are discussed; those who take part in contests may like to read some suggestions on changing the rules; the 15m Direct Conversion receiver is completed; and the Great Morse Code Debate continues unabated.

"CB Action" continues their series on weather satellites; the BFO control on a short-wave receiver is modified to serve as a fine-tune control; a "house-loop" antenna is explained, along with a way to rejuvenate dead gel-cell batteries; and a series on how antennas work is continued.

We are informed that "Amateur Radio Action" and "CB Action" will be combining forces soon, and we look forward to reviewing it; in the meantime, we have come across another Australian magazine, "Listening In", which we will be reviewing soon, along with some other local productions.

-- Dave VK2KFU

ITU Day

I.T.U. Day, 17th of May 1995

As customary, I wish to advise the Council and the Divisional President about the arrangements to celebrate I.T.U. day on the 17th of May 1995.

I will be operating the special event callsign AX2ITU on behalf of the Division from 0001 UTC to 2359 UTC on that UTC day in CW and

SSB mode on various bands, depending on propagation conditions.

This is an annual event of this Division in the past many years.

To save double handling of QSL cards, I nominated myself as QSL Manager.

from Stephen Paul VK2PS
Special Projects Officer

VK2 WICEN News

WICEN News

The 1995 Goulburn Training Conference has been postponed, probably to August, due to insufficient people having registered by last Friday. If members want this annual event to continue, then a lot more interest will have to be shown in it.

The WICEN BBS is currently off line, and it will soon return to service on a number to be announced; we thank the users of this system for their patience.

Those members who have not yet renewed must do so by 30th June, if they wish to remain a member. For just $10 (plus a joining fee) you can be a member of the only Amateur Radio organisation accredited to take part in disaster situations.

In two weeks' time is the annual Wyong 2GO Rally. This event is the most significant rally on the Central Coast during the competition year, and it is to be held over the weekend of 20th-21st of May, in a compact area of the Watagan Mountains to the west of Wyong. The event will be conducted through a controlled network of base and field stations, and there will be a need for about twenty operators on each day of the event, for about six hours on each checkpoint. The event starts at 0930 Saturday and will finish around 2245, and on Sunday it is 0700 to 1710; access to and from each checkpoint is no problem for normal vehicles. For further information, please contact either Andy VK2XRX or David VK2UDT.

Next weekend is the Rathmines Fun Run co-ordinated by Steve VK2KBL, and the Variety Club of Australia Newcastle Bash is on 23rd-26th May, with Maurie VK2CD in charge. Finally, the closing date for the Annual Reports is 31st May. WICEN Members who are also members of the WIA (and if not, you ought to be) may be interested to know that following a hearing by the Federal Court, their Annual General Meeting will be at Doonside on 1st July; Council nominations for same close on Saturday 20th May, at 2pm.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at

8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

News Briefs

AMATEURS PROVIDE EMERGENCY COMMS AT OKLAHOMA BLAST SITE

[Courtesy of the ARRL, here is an update on how Radio Amateurs assisted in Oklahoma City, following the recent bomb attack there.]

Within minutes of the deadly explosion at the Oklahoma City federal office building, Amateur Radio operators set up an emergency coordination network that has been in non-stop operation since April 19.

According to updates from Thomas Webb, WA9AFM/5, during the first few hours after the blast, telephone circuits were jammed and often inoperative. Amateur Radio provided vital emergency communications to rescue and relief organizations until regular telephone service was restored.

Located at the Salvation Army Emergency Coordination Center, a net control station coordinated the efforts of more than 20 Amateur Radio stations in downtown Oklahoma City.

Volunteer operators were assigned to the five Salvation Army canteens, the Salvation Army Area Headquarters, the Red Cross Command Post, and the primary search and rescue command post. Using hand-held and mobile radio equipment, hams provided relief workers with reliable, mobile emergency communication for more than 190 continuous hours. Besides coordinating the distribution of supplies, food, water and equipment, the volunteer hams also drove vital supplies to locations in the disaster area.

During early relief efforts, technical skills of volunteer hams were put to the test when it was determined the buildings in the downtown area were blocking radio signals. A mobile repeater station was established at a Salvation Army canteen, allowing for communications to be sent and received easily.

In addition to providing communications to rescue workers, hams at the Salvation Army Emergency Coordination Center continue to process health and welfare inquiries from friends and relatives outside the Oklahoma City area.

More than 100 hams have participated in relief efforts, with between 60 and 80 hams working at any one time. Most of the ham volunteers are from the Oklahoma City area, but offers of assistance have come from all over Oklahoma as well as Texas, Arkansas and Kansas.

US AMATEURS GAIN NEW BAND

On April 26, 1995, amateurs will gain secondary status access to 219 to 220 MHz. Amateur operation is limited to forwarding stations in point-to-point fixed digital message forwarding systems--including intercity packet backbone networks--only.

All amateur stations are required to notify ARRL (in its FCC-designated role as contact point) at least 30 days before operating in this band, and amateur stations within 80 km of an Automated Maritime Telecommunications Systems (AMTS) coast station must obtain written permission from the AMTS licensee before operating.

Amateur stations between 80 km and 640 km of an AMTS coast station must notify the AMTS licensee.

A Form 219A kit, available from ARRL Headquarters, includes a cover letter of explanation, a Form 219A for the required notification to ARRL (one is required for each transmitter planned), and a copy of the 219 to 220 MHz band plan.

--From ARRL Bulletin number 44

Summerland Expo

3rd Summerland Computer Expo

The 3rd Summerland Amateur Radio Club Computer Expo will be held at the Lismore City Hall on Saturday 27th May 1995.

This will be an opportunity for you to inspect or buy the latest in computers, electronics, communications, office equipment and furniture plus many other allied modern technologies that are becoming available in these fields.

Many of the leading North Coast and Queensland suppliers will be exhibiting their latest products at this, the greatest Expo of its kind to be held in Lismore and District.

Facilities will be available to sell new or used equipment you may wish to dispose of and of course, to avail yourself of the opportunity to but the best bargains of the day.

Admission will be $2 per person or $4 per family. Small children MUST be accompanied by an adult.

Exhibitor's Fees will be $30 for the first Display Stand and $25 for each extra Stand. The increase is to allow the hire of the Hall on Friday night to provide earlier access for setting up as requested. Access will be available from 8pm on Firday night for setting up of displays.

Individual advertising shall be the responsibility of the Exhibitors, however should it be desirable or practical, group or feature advertising may be arranged if sufficient support is evident.

Any equipment brought into or left on the premises by any visitor or exhibitor shall be left at that person's risk and no responsibility shall be accepted by the organisers in any way for its safekeeping or protection. The building WILL be occupied throughout Friday night to assist security as well as the Hall's normal security.

If your firm has not yet arranged to exhibit at the Expo and you would like to, please contact Mr. Rick Virtue, 111 James St. Dunoon 2480 or phone/fax 066-895137.

Book of the week

RECOMMENDED READING

The Division has recently received a review copy of the booklet "Planning Permission" from the Radio Society of Great Britain. The booklet details the forms and procedures you need to complete in order to obtain permission to erect a mast and antenna.

While much of the information is specific to the UK (and may be of use to the rare Amateur who migrates from Australia to antipodes), there are useful sample diagrams that would accompany a planning application, a "neighbour's reaction" form, and a list of "Frequently Asked Questions" that help answer the neighbours' concerns about your proposed antenna mast. "Planning Permission" will soon be available from the Divisional Office.

Now that the SMA requires us Radio Amateurs to take responsibility for resolving TVI and RFI problems, we all need to know how such problems arise, and how they can be cured. The "Radio Frequency Interference Handbook", compiled by the Department of Communications, as the SMA used to be known, details the causes of EMC (electromagnetic compatibility) problems. Some of them might surprise you, as it's not just Amateur and CB transmitters that are to blame.

A number of full-colour illustrations allow you easily to identify the kind of interference a television set is experiencing, and shows a number of ways to eliminate or alleviate EMC problems. As well as the technical side of RFI, the book covers aspects of dealing with radio inspectors and the public.

IPS Report

IPS WEEKLY REPORT
---

28 APRIL - 04 MAY

DATE OF ISSUE: 05 MAY 1995

INDICES:

DATE 28 29 30 01 02 03 04

A 11 7 4 2 38 35 (21 ESTIMATED)
T 7 9 8 12 9 -8 8

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET TO ACTIVE ON 28TH APRIL, THEN QUIET 29TH TO 1ST MAY. THE FIELD WAS AT ACTIVE TO MINOR STORM LEVELS ON 2ND, REMAINING AT MINOR STORM LEVELS ON 3RD, DROPPING BACK TO ACTIVE LEVELS ON 4TH MAY.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE 10 TO 15 PER CENT BELOW PREDICTED VALUES ON 28TH, AND 10 TO 15 PER CENT BELOW EARLY ON 29TH. THEN FOLLOWED NEAR PREDICTED VALUES UNTIL EARLY ON 3RD WHEN FRQUENCIES WERE DEPRESSED TO 25 PER CENT UNTIL 0700UT, RETURNING TO NEAR NORMAL FOR THE REMAINDER OF THE WEEK.

FORECAST (05 MAY - 11 MAY)

SOLAR: VERY LOW.

GEOMAGNETIC: 05-08 MAY ACTIVE DUE TO RECURRENT CORONAL HOLE. THEN QUIET TO UNSETTLED UNTIL 11 MAY.

IONOSPHERIC: 05-08 MAY PERIODS OF DEGRADED HF COMMS ARE EXPECTED. THEN NEAR PREDICTED MONTHLY CONDITIONS.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Illawarra

CLUB NEWS

The ILLAWARRA AMATEUR RADIO SOCIETY INC. advises its members that the next club meeting is this Tuesday evening, starting at 1930 hours at SES headquarters, North Wollongong. As this is an interclub meeting with a computer users group all members are advised to attend. After the meeting a packet demo will be given. Will there be scones jam and cream or the same old biscuits again? Well, to find out come along. Visitors most welcome.

--Brian vk2ubf (the all round nice guy)

Club news: VHF/SHF DX Group

From the VHF to UHF DX Interest Group

Just a reminder that the next meeting of the Group is on the third Tuesday of May (i.e. 16th starting time 7:30pm) at the usual

venue, which is WIA offices Wigram St.

We will be checking out the pre-amplifiers we have all built and also discussing the next project which is the controlling of transceiver / amplifier / pre-amplifier / aerial switching (this particular topic doesn't necessarily apply to VHF/SHF operation.

Please note that the SSB activity night which is still being held every Tuesday evening 20:00 to whatever, it is well patronised but the group is always happy to see new stations so lets see you there and join in the fun.

Richard Soulie VK2ARS Publicity Co-ordinator

Club news: Hunter Branch

Hunter Branch Radio Group monthly meeting will be held on Thursday evening, the 11th May 1995 starting at 7.30pm.

The meeting will take the form of a visit to Telecom Hamilton Telephone exchange, location Lawson Street Hamilton.

All members are requested to be there at 7.30pm.

The technical tour will take approximately two hours.

from Rodney Prout VK2CN
Secretary

Club news: SPARC

SPARC meeting

The next meeting of the Sydney Progressive Amateur Radio Club will be held on Wednesday the 10th May at 7.30 pm at the club rooms. These are located at Middlemiss Street, Milsons Point, in the first arch below the railway line (the State Emergency Services headquarters for North Sydney) and immediately to the north of Lavender Street.

The Secretary of the Club, John Innes, VK2AUI, will be presenting a talk on early and unconventional amplifiers. He will also be talking about this year's Dayton Convention, from which he has just returned. Come along and be made thoroughly envious of our well-travelled secretary and the mouth watering items that he will describe.

Refreshments are available and all are welcome.

Club news: AATC

Australian Amateur television Club

The next meeting of the A.A.T.C. Inc be on the 3rd Sunday of this month - May 21st - and it is to be held at 10 Manus Place - Glenfield promptly at 1.00 pm. Note this is the week after

Mothers Day.

Technical items prior to the meeting will be an mini talk of the new club power supply by VK2XOF and the video to TTL monitor - that is using an old IBM mono monitor as a PAL/VHS video monitor - also the latest boards for the twisted pair television transmission over a twisted pair up to 1000'. Also an outline as to a schematic drawing package will be discussed - so you can get all your drawings up to date on the IBM - so bring a 3.5" floppy for download.

Anyone interested in ATV is welcome to attend for general information and the general technical information.

For more information about ATV - contact Bob the Publicity Officer on (02) 587-3491 between 4.00 pm and 10.00 pm Monday to Fridays.

Notice to all members: AGM countdown, weeks away, nominations please.

An IBM PCB CAD drawing day will be held soon - learn how to design a printed circuit board - you will need to bring an IBM and a portable colour tv. This will be open to any-one - location and time to be announced. For more information contact RCS Radio for invite.

AATC Inc. Publicity Officer Bob Barnes

Club news: Great Lakes

The Great Lakes Radio Club has recently experienced problems with its UHF packet digipeater which has resulted in its absence from the Rose backbone. By the time this bulletin goes to air the fault should have been cleared. Inconvenience to users is regretted. To compound packet problems, the 144.725 MHz repeater at VK2EO, a BBS on VK2RGL, also failed early in the week. This was replaced with a temporary unit on Saturday 29th and normal service restored. Our thanks to geoff for such immediate action. In the meantime a heavy load was placed on VK2KLW, the other BBS on this digipeater. Again inconvenience to users is regretted.

Informal discussion took place at the club's April meeting of the need to reactivate regionalisation proposals, so that country members might have input to WIA decisions, the alternative of nominations for Divisional Council being seen as impractical in view of the cost of attending meetings. The club also welcomes comment from other country clubs on this concept. (President's note: The Divisional Council would like copies of any of these comments for information).

Daryl, VK2DAZ, and Michael, VK2CMW, co-ordinators of communicat-ions for the annual Forster-Tuncurry Iron Man Triathlon, wish to convey their thanks to all who assisted with this event. The

requirements are well beyond the resources of clubmembers alone, and some amateurs travelled considerable distances to participate. For the first time a club portable voice repeater was utilised and proved highly successful. Congatulations to Daryl, VK2MZ, on its design and construction.

Stan Ellis, VK2DDL

Coming events

COMING EVENTS

Now, a summary of upcoming events of interest to members and other Radio Amateurs and Shortwave Listeners...

(Help reduce Amateur licence fees! Send us a copy of your original fees submission, and specific examples of how you or your club have used, or are using, Amateur Radio to benefit the community!)

Sydney Progressive ARC meeting . . . . . Wednesday
Hunter Branch Radio Group monthly meeting . . . . . Thursday
WICEN Central Coast meeting at Wyong (David VK2UDT) . . . Friday
Rathmines Fun Run (WICEN--Steve VK2KBL) . . . . . Saturday-Sunday
Manly-Warringah Radio Society communications exercise next Sunday
Hunter WICEN meeting (Pauline VK2GTB) . . . . . 15 May
VHF to SHF DX Interest Group meeting . . . . . 16 May
International Teleccomunications Union Day (AX2ITU active) 17 May
VK2 Divisional Council meeting . . . . . 19 May
VK2 Divisional Council nominations close . . . . . 20 May
Wyong Car Rally (WICEN--David VK2UDT & Andy VK2XRX) . . 20-21 May

that's pretty good. it takes us around 6-8 weeks to get a new book through
editing/composing/layout, photolitho, printing and binding...and we're just using
those acco binder things.

or is this one of those things that is made on a xerox copier? maybe you have
a 1090 or a 5100 so you can make 15-20 booklets a minute...maybe a 5100
so you can run 11x17 duplex to make a 4 page "signature" and with automatic
document feed you could do about 5-10 books a minute if you didn't need
saddle stitching...

go to your local real printer and get some quotes for 200,000 copies of
a 200 page, perfect-bound, four color process job. both cost and turn around
and find out what needs to be supplied.

3 months is about right -- things do go wrong, you know...

Does anyone know if the new (well almost new) satallite TV system is susceptable to RFI. especially when one considers that 18 inch dish may be located a matter of a few feet from a yagi or quad pushing out legal limit power.

2719. *HELP!! HF MOBILE NOISE

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-10 00:00:00 UTC
From: UCKK35A@prodigy.com
Message-ID: <3op9nh$v52@usenetp1.news.prodigy.com>
Source record: 246786

Hello,
Looking for suggestions to eliminate RFI in a mobile installation Im working on.
Just picked up an old (1979) Swan 100MX solid state HF rig. Everything works great as long as the engine is not running. The interference Im getting is kind of a motor boat sound. Ive heard worse interference, but on 20 meters when the band is a little cold...forget it. The interference seems to be worse on the higher freqs. The vehicle is a 1989 GMC full size van with a 350 V8.
I have installed a RS line filter in the 12 volt line to the radio. I have installed a ground wire running from my antenna mount to the frame of the van. I have grounded the chasis of the radio to the frame of the van. Still getting lots of noise. Unfortunatly the noise blanker in this older rig is pretty poor. The noise seems to be coming in from the antenna. If I pull the coax the noise disappears.
Anyone have any suggestions to offer? I am anxious to get to operating HF. I travel long distances and this will really make the drive go better.

I think you have missed the point completely about advertising. When you have a commodity that has fluctuating prices due to revaluation of a foreign currency (namely the yen). If you were to put a price in your add in January and that ad was published in March, who would be mad??

Would you not be upset that the ad said $500 and when you call they say $600 or would you rather call one dealer, get the price, call the second dealer and get the price and have a basis for make your decision. It would also make you very mad seeing the lower price and then telling your friends that you should not bother calling that dealer because his listed price was lower than what he told you he would sell it for.

If we could have instant media advertising such as internet (although commercial advertising is not allowed) you could list your price and if there was a price change, you could update all your prices instantly.

Some manufacturers pay for advertising in the form of co-op dollars. The usually specify that if you advertise a price below a certain amount, they will not pay for the ad.

So some of the problems have to do with the manufacturers and others with the value of the yen. Of course, QST does not have anything to do with what a vendor puts in his ad.

Hi, I am familiar with the problem of locating manuals for Heath Kits.
Here is some very good news. You can still get duplicate manuals from the
Heath company. Just call them up and they should be able to help you.
about 8 months ago I ordered a manual for a Heath Kit that I aquired. The
price was about $15.00 and I received the complete manual (building and
operating). I hope this has been of some help. 73's

>a newsgroup, does it?

All that is needed for a group to form is 100 more yes votes than no votes.

>In the past 3 years every time a suggestion was made to shift from an email
>list to a newsgroup the suggestion was always vehemently voted down.

And why I am not a member of the mail list ... (There is a hint in there).

>If the low-profilers want a group, then why not start an email list?

Because, the defined message of the low-profilers requires some active
information retrieval, something a mail list can not provide because of
it's more obscure nature. I do not support the low-profilers group because
it heavily overlaps the r.r.a.antenna group, though ...

>Such lists are very very successful, for they target a select-interest
>group and as a result the noise level is quite low (no flame wars).

You mother wears army boots, and dresses you funny.

>With well over 7000 newsgroups some sites may have reached the saturation
>point and choose not to subscribe to the new rec.radio.amateur.low-profile.

Even though I do not support the group, I would be pleased to distribute it
despite the 7000 newsgroup saturating my disk transfer statistics ...

Or perhaps "YOU guys" (the self-annointed net cops) don't get it.

There are many of us out here who welcome access to ANY and ALL
information relating to our hobby.

"If you don't like it, don't read it."

GS>entertained.
GS>>

GS>I am confused are you contending that K1MAN never threatened
GS>felony affidavits? I remember clearly when it happened.

Well, you didn't quote the part I was commenting on. It was quite clear
what I was commenting on, but instead you quoted it as if I
was referring to the affidavits. If you are going to comment on my
replies, please read them first and use the quotes of my comments
IN context!

GS>Did Glen never give an ARES net two hours to get off his
GS>frequency? During an emergency as I understand it.

Again, that is NOT what I was commenting on.

GS>Use of bogus legal threats is bullying if not outright
GS>terrorism. People fear the legal system Glen made it sound like
GS>he was going to put folk in jail.

I cannot comment on that. I do not have the onfo to judge that
action. Perhaps if their silly attacks and bullying had escalated,
he might have felt that this was his only recourse to defend
himself and make them back off, but again, I do not know.

GS>My hope that the FCC throws out W5YI's petition and pulls
GS>Glen ticket is what I believe would be in the best interests
GS>of Amateur Radio.

Why would they pull Glen's ticket?

GS>It is a monumental battle of monumental egos
GS>and the collateral damage is not even in the equation.

Not in the equation? You mean you don't think there is any?
What about the damaged reputation of amateur radio?
Hams USED to be known as gentlemen! They still are gentlemen on

all HF bands other than 80 and 20 metres! (Oh and a few ladies and lambdas!)

GS>By the way Brian, who is George? That bit confused me also.

Probably another person on the Newsgroup whose comments I was responding to, Jerry. I don't know. Did I get some names mixed up?
No problem. 73 de AF4K

AM>I'd be interested to know what got you into amateur radio. Maybe
AM>if we understand what kinds of things attract women to ham radio
AM>we could encourage more women to become hams.

I know what kind of thing has DIScouraged a number of women:
Some of the boring QSOs, ugly remarks, rudeness and foul language
have contributed to this. A lot of women migrated from CB to amateur
radio in the 1970s, but since then, I think we have attracted a
broader group of new hams that happen to include a few less women.
Or are we mistaken in this perception?

One thing that may have helped is that "Zack" on TV is known for having a ham radio. He lost it to another kid at school in a wager recently. I forget the name of the show. I think he gave up a brand new looking ICOM 737 HF rig on the show! It seems that his pal "Screetch" had been made psychic for a while and able to predict things, so he bet things with other kids. Then the magic wore off and he lost everything. Somehow he eventually got his rig back. This episode might have attracted quite a few teenagers to amateur radio. Who knows...

This seems to be the best suggestion. I would definitely be interested
in subscribing. Such a mailing list should have some provision for a
daily digest as well, since some of us simply cannot receive many
messages daily without attracting adverse attention. (How about another
list called Internet.e-mail.low-profile ....!

>With well over 7000 newsgroups some sites may have reached the saturation
>point and choose not to subscribe to the new rec.radio.amateur.low-profile.

This is also a valid point. I'm pretty sure that I would not have access
to such a specialized newsgroup through my present means of access.

Marty,

There is a company in Maine that make such a computer program. The companies name is DeLorme
, I believe I have the spelling correct. They make a program that will reference you to an actual street map, although i think their map is finer than a road map. many cases it shows streets, farm lanes, driveways etc. The program costs about $ 400 to 500 dollars the last I knew. Lots better than APRS, but much more expensive. You can actually drive around town with this system and see where you are.

I've recently activated a repeater in Greene County, New York and would appreciate some signal reports.

The repeater is on 145.45 mHz with a -600 khz input and is located in the Jewett/ Windham area of the Northeast Catskills. The antenna is at about 2000 ft AMSL and the ERP is around 40 watts. It can be identified by it's multitone beep and CW ID " KA2PAP/R ".

Please post your reports here or Email me at Iannace@AOL.COM. The repeater is currently at a temporary location and will be relocated to a 3100 ft mountain peak in a few months.

Well, in an area like the LA Basin where the repeater density is high, having a broad-banded rig is an invitation to intermod. Kenwood does offer a 2M/70 cm/23 cm unit, but there isn't that much activity on 23 cm, even here; just a few repeaters.

True, 220 is most commonly offered in single-band HT or mobile units, or 2M/220 HTs. I might make an educated guess at the reasons for the lack of 220 gear, or 220 in combination with 2M or 70 cm: a) 220 is not an authorized band in Japan, where the majority of VHF/UHF gear originates. Japan has twice the domestic ham market that the US has, yet the 220 rigs would be export-only models. b) We have already lost part of the 220 mHz band in this country; perhaps manufacturers aren't confident that that band is going to be around in the long run.

There is a considerable anount of 220 activity here. If fact, our club has 2M and 220 repeaters, but no 440 machine. I'm hoping to be able to change that.

Apologies for the prior message--it was sent in error.

Jim

My local HRO guy said that ICOM had originally aimed to have the street price just under $1000., to meet the competition, but that the fall of the dollar vs. the yen had done that goal in.
It fits everything I've heard.

ARLB052 Oklahoma help completed

ZCZC AG19
QST de W1AW
ARRL Bulletin 52 ARLB052
From ARRL Headquarters
Newington CT May 10, 1995
To all radio amateurs

SB QST ARL ARLB052
ARLB052 Oklahoma help completed

The primary Amateur Radio operation in support of recovery efforts in the bombing of the federal building in Oklahoma City ended at 4 PM on Tuesday, May 2.

Amateurs had maintained a network continuously since 9:15 AM on April 19, with more than 300 operators from Oklahoma, Kansas and Texas providing communication through the Oklahoma City Autopatch Association repeater.

Amateur operation then shifted from the blast site to coordinating Salvation Army activities, on a simplex frequency. As of 4 PM on May 4, Amateur Radio operators in Oklahoma City had conducted emergency communication for more than 360 hours.

ARRL Public Information Coordinator Tom Webb, WA9AFM, said that those involved in the post-bombing communication effort credited numerous disaster drills, established Amateur Radio networks, emphasis on proper on-air procedures, and experience in weather spotting nets for the success of this operation.

Later this month, Oklahoma City amateurs will meet to discuss their activities and for a debriefing.

Hello and many thanks to everyone reading my article.

I've started `packet radio-to-the Internet' mail gateway service
on 1.2GHz FM since last March, so I would like to know how active
or popular such connectivity is now in your side.

The straightforward question is as follows:
Can you access the RBBS or gateway which handles the Internet
mail through packet radio? Are you running the system to serve
the Internet mail exchange for local packet radio users?

In this context, the term `packet radio' includes neither radio
TCP/IP nor FWD-NET. In the system of mine, the users are able to
connect to my TNC by the simplest manner in which reading and
writing mails from/to the world are processed by the easy menu-
driven user interface. The figure below illustrates the outline
of the current operation.

<FIGURE>

Nice call, Jerry :)
Make your own from W1AW. Better do it now before Fred Maia shuts 'em down.
Oh, I've heard some faster stuff at around 3522 at maybe 0200Z. It was a W1
call. He does code practice up to about 50WPM!

ARLB051 Maia petition rebutted

ZCZC AG18
QST de W1AW
ARRL Bulletin 51 ARLB051
From ARRL Headquarters
Newington CT May 10, 1995
To all radio amateurs

SB QST ARL ARLB051
ARLB051 Maia petition rebutted

The deadline for comments has passed on a petition for rule making to the FCC that would prohibit all one-way transmissions (below 30 MHz), such as code practice and information bulletins from W1AW.

The petition, RM-8626, was filed by Frederick O. Maia, W5YI, in March. The ARRL urged the FCC ''in the strongest possible terms'' to deny or dismiss the petition without further consideration.

The ARRL said that Maia's arguments were overstated and inflammatory, in their use of words such as ''chaos'' and ''crisis proportions'' to describe what he sees as on-the-air disagreements among amateurs related to one-way transmissions.

The League cited W1AW's 65 years of free service to amateurs; other countries whose amateur societies also conduct informational bulletins on the air; the absence of any allegations that W1AW creates any significant interference to ongoing amateur communications; and the value of W1AW's bulletins in alerting amateurs to disaster situations.

The ARRL also said that since W1AW bulletins are not intended for the general public, they hence are not ''broadcasting,'' according to definitions in the Communications Act, the ITU Radio Regulations, and the Amateur Service Rules. They are, rather, amateur communication that has no more potential for undue interference than two-way communication.

The League said that ''any on-air anger perceived by Maia'' ought to be the subject of FCC enforcement action, not rules changes, saying such situations were the direct result of the Commission ''allowing abuses to continue for months and years rather than timely addressing them in the context of the existing rules.''

The old Heath rigs are fine for their time. Besides tubes, the most common problem is dirt on contacts of switches and relays, and just plain old wear and tear. You can wear out a relay or a switch. A lot of it is still replaceable, but it is not a simple thing to find the exact replacements. Ingenuity can keep those rigs on the air forever, though.

Good luck

I agree. I don't advocate a kind of 2M "talk radio", but sometimes the subject matter is a bit much. In the wake of the Oklahoma City tragedy, the best they could do on repeaters in my area was to discuss drywall hanging techniques or engage in mindless teasing and sarcasm. I think the hobby fails to attract a lot of good, well-rounded people because of the connotations Greg mentions.

> repeater channels in the empty slots. Assuming you take appropriate
> measures to prevent unauthorized use of your "new" ham station, what
> rules would you violate?

None. As long as you hold a valid license for both usages.

And the problem that people have had with the FCC wasn't with having radiods modified to use in the marine or public service frequencies, but in their using non-type-accepted radios in leu of type-accepted.

For example, volunteer fire department has a channel on 462 Mhz. And most if not all of the volunteers are also hams. If you by Icom U-16 handhelds and have them programmed (by a licensed technician) for both your 462 public service frequency and a couple of ham channels no problem and no grief from the FCC.

If on the other hand, you decide to buy the Kenwood TH-77a and clip the "green wire" so it will operate in the 462 range in addition to the ham bands, then you are going to face confiscation of your radio. And the reason for that is because you are using a non-type-accepted radio. Not because it is "illegally modified" etc. etc.

If on the other hand (third scene) you have a Motorola HT on 462 and a Dualband Yaesu FT-470 that has been modified to work on 462 as well as the amateur bands, no one will even notice usually. Or care for that matter. As long as you remember to use the Motorola type-accepted one on the "job".

All in all it's pretty simple if you just stop and think about what the rules are actually telling you. But of course, some people just want to endlessly debate non-issues.

FYI Karl - I didn't write the "once in a blue moon" paragraph. But let's drop boaters from the discussion - if they are having radios impounded, it's between them, the Coast Guard and Part 80. Those rules create their own set of "what if's".

>> Where does it say that it is illegal to have a modified radio that is capable
>> of transmitting out of the ham bands? There is no type acceptance requirement

Yeacomwood? Good one - a lot like the generic Oldsmobuick sedan.

The programming restriction for part 90 gear isn't in part 2 or 15 - it's in part 90 and only applies radios to utilized under that part. I don't use my 2M or 440 gear as a part 90 radio so I don't worry about it. Part 2 doesn't set out the TA

requirements, it just deals with general rules and refers to some TAs contained in other parts. Part 15 deals with RF devices that don't require licenses such as cordless phones, garage remotes, scanners, computers, etc., not licensed commercial or ham gear.

>> There are legitimate reasons for having out of band transmit capability. I
>> have used my transceivers overseas where FCC type acceptance is worthless.

>they can legally impound your HT and fine and jail you for bringing in a
>radio that is illegal to possess or sell under the FCC rules.

It was legal for import when it was imported for sale. But as a licensed operator I can open it up and do what I want to it - and still remain responsible for the emissions being compliant with the rules.

I am no expert on the import of any type of equipment, let alone radios. But if you take personal belongings out of the country and return with it you normally don't have to declare it. I have asked about this when returning to the U.S. with test equipment and small computers (P.C.s). It would be like saying that I was importing my toothbrush. I have never been required to file an FCC form 740 for my company owned equipment, that I took out of the country and then brought back.

And I too was referring to my 2M (actaully, dual band) equipment that I have used in Africa and Asia. I have used it in the U.S. as test equipment - it once allowed me to retune a duplexor during an emergency (a forest fire) when I didn't have a suitable service monitor. You can do what you need to do when you are using a dummy load.

I acknowledge that if you are going to push the rules to the edge you need to be careful. My point is... MERE POSSESSION of modified equipment by a licensed amateur is not inherently illegal. But it doesn't take too much fooling around to violate something.

Getting back to the original question in this thread, you are absolutely correct in saying that you won't find a legal part 90 radio that has user programming ability. But even in that case, it applies to HOW the radio is programmed, not WHO programs it. With no licensing requirement for service personnel, an end user (station licensee?) can easily become a service person if he buys the manuals and figures out how to do it.

While we are all crwoding on the type acceptance soapbox... someone answer this one since I can't see where the rule conflict would be between part 97 and 90 in this particilular, "hypothetical" case.

You have a type accepted, synthesized, commercial two way radio that you use for for commercial purposes under a part 90 license. It has a few channel slots that are not being used and you have access to the programming. You decide to put a couple of your favorite amateur repeater channels in the empty slots. Assuming you take appropriate measures to prevent unauthorized use of your "new" ham station, what rules would you violate?

I am telling myself, "This has got to violate some rule" but I can't find it. Any answers?

: I have the same problem with my HTX-202 on 146.70. It doesn't make sense
: but it happens. Use the outside antenna, it works better as a rule. :)

Or just extend the rubber duckie away via a 50 ohm cable. However, it
isn't "just the noise from the house." I had the opportunity to compare
another HTX-202 right next to mine. Mine exhibited the 146.76 noise (at
5 on the scale) while his didn't show anything at all. Side by side,
no matter where we moved them, even outside. Swapping the antennae
eliminated that from the equation, it was definitely in the radio.

Other than this, the HTX-202 seems a reasonably good HT.

This sounds like some of the comments I occasionally hear about the
remote base I put on the air (220 and 440 control inputs controlling
2 meter FM and HF SSB transceivers as well as a full duplex phone
patch).
For one thing, I am one of those irritating sort of hams who likes to
build and tinker and especially enjoy meters, blinking lights,
weird radio type noises, etc. Here in NM there are dozens and dozens
of repeaters on the air that do nothing except repeat the input audio
out on the output of the repeater... not a bad thing to do but when
there are already dozens of repeaters doing the same thing what's the
point? Also, at odd times around this part of the world (like during
the day when everyone's at work or in the wee hours when everyone's
in bed) there is NO RESPONSE when you try to get a qso going on ANY
"normal" repeater. With an HF remote lurking in the background it is
much easier to find a band open with some other weirdo awake and
willing to pass the time with you in a QSO. Also it is very nice to

be able to "carry your shack in your pocket" and scan 2 meters or HF frequencies through a remote while walking or biking or, as mentioned before, even while mobiling in a vehicle. Many of us don't have the luxury of getting fat fannies while sitting in front of our Kalifornia Kilowatt Kenwoods at home. Without a remote base I would rarely if ever enjoy an HF QSO. With one, I can keep track of what's going on in many parts of the world while working in the garden or even AT work.

No, repeated contacts are not legal in any contests except maybe in some UHF/microwave contests. That's too bad in some ways because it keeps those less affluent hams who cannot afford both HF and VHF gear from getting any enjoyment from contests. Not being too big a fan of most contests myself I find little sadness at this. But there are those who would enjoy such things and I still think there is room for others in this hobby who don't think just exactly the same way I do.

Remote bases a PROBLEM? They are the SOLUTION to problems such as not being allowed antennas, not enough money to buy a decent HF setup, etc. There are only a few dozen or so active remote bases in operation so far so I'd hardly call them any sort of big threat to anyone's pet views. I can see that in the future as antenna restrictions become harder to deal with, housing becomes ever more expensive and thus more hams will be living in apts and condos, etc, that remote base operations will become more and more popular. If that forces hams to use more of the wasted 220, 440, 900, 1296, etc spectrum then that's great too.... my opinion, that is.

Jim Devenport WB5AOX

Marc Grant (mcgrant@bnr.ca) wrote:

: It's about time that someone cracked down on these people, not only in
: California, but elsewhere, who believe they can hold a frequency with no
: activity.

OK, maybe I need to read the FCC regs again, but it was my impression that anyone could establish a repeater anywhere, and on any frequency. This is as much true on 440 or anywhere in the VHF/UHF spectrum as it is on HF; that no individual has claim to any particular frequency.

Here in SoCal, the repeater density is such that there are often two or three nearby repeaters on the same frequency pair, and going to PL is pretty much a matter of self-defense. Even on 220, there is another repeater in operation in the LA Basin, on our club's frequency. It is being authorized on a test basis, and we can compile a list of interference reports to submit to the coordinating body. Even at that, though, I didn't think that either the coordinating group or the ARRL could do much about repeater-to-repeater interference; that coordination was more of a gentleman's agreement, and was not binding.

: The Texas VHF Society (TX coordinators) have been doing an admirable job
: lately of waking up sleeping frequency occupiers, letting them know that
: it's "use it or loose".

Again, on what authority? It still seems like cooperation on frequency coordination is voluntary.

I started this thread for two reasons: a) to discover any open 440 repeaters that aren't in the _Repeater Directory_ and b) hopefully, to connect again with the gentleman who had invited me onto his closed repeater on Sunset Ridge, 446.35, in a previous post. I did not intend to start an offline repeater war.

As far as I'm concerned, the decision to have an open or closed repeater should rest with the owner or group that sponsors it. There are valid reasons for a closed system, not the least of which is cost of installation and maintenance.

If I've missed something here, especially in the area of "hostile takeovers," please set the record straight.

Jim

Message-ID: <800244196.F00002@leotech.mv.com>
Source record: 246598

Just a thought for possible conversation

I did not mind when the idea of a no code ham license was proposed. I thought that as long as there was some sort of WORK required to get the license it would have value to whoever earned it.

Later I found out that the answers to all the multiple choice questions were published. I was told this was due to the freedom of information act. It seems that not only ham but all tests for radio licenses have the question pools with answers published.

When I went for my extra I used the 6NOA tapes to study the question pool. Gorden West would read each question and give the correct answer. When I took the test I found I did not have to even read the questions. Since I never heard any of the wrong answers, only the correct answers rang a bell. I did not even have to memorize them, just recognize which ones I had heard before. I aced the test.

It is really too bad the ham and commercial license tests have been dumbed down this much. I feel it has made the commercial tickets meaningless, and the ham license just a bit too easy for my comfort. I wonder if anyone else feels this way.

I got my first ticket in the late 60's when you had to really work for
it. You really felt like you did something then to pass an advance ham or first class Radiotelephone license. Since then they have changed the first Radiotelephone to a general radiotelephone. The folks with second class radiotelephone got one of these general tickets as well, even though they could not pass the first class test. Now they give the answers away for the General Radiotelephone as well. A kid could get it easy.

I wonder if there is any way to bring back some meaning to these licenses in the future??

>a generator of mindless drivel myself.

Why limit yourself to 2m? What about the dumb things I hear on
160m, 80/75m, 40m, 30m (in CW/packet), 20m, 17m, 15m, 12m, 10m, etc.?

Maybe it is too close to home, but, as others have said, these
"dumb" conversations show up throughout amateur radio. I hear
plenty of silly things on 2m, too.

On the other hand, I've heard interesting things on all those
bands, too. But, it really boils down to what one person considers
interesting and dumb. In other words, to a large extent, who are
we to pass judgement on the (otherwise legal) conversations that
take place on ham radio?

Message-ID: <RG28roQ.sanderman@delphi.com>
Source record: 246605

"This Week in Amateur Radio" will return to its former home on Telstar 302, transponder 21, 5.8 MHz wideband analog audio, on Saturday, May 20th. The amateur radio bulletin service, based in upstate New York, had lost access to the satellite following the announcement that the "Omega Radio Network" was ceasing its operations on April 30th. "This Week in Amateur Radio" provides ARRL Bulletins, "Amateur Radio Newsline", "The RAIN Dial-Up", and other amateur radio news and information features each Saturday at 7:30 PM (EDT). In addition to the C-band commerical satellite feed, the program is carried live on WA0RCR in Wentzville, Missouri (suburban St. Louis) on 1860 kHz and at other times throughout the week. The May 13th edition, though not available on the bird, will be available on 160 meters and to local repeater affiliates via landline by appointment. Contact Stephan Anderman, WA3RKB, the service's Host and Executive Producer, at 518-664-6809 for further details.

I, for one, believe you, Greg. I hear pretty much the same exact
thing on 2-meter repeaters in this area (RI).

The problem is compounded in this area by having dozens of
"two-month extras" (people who go from having no license to having
an extra-class license in two months or less) who get on the repeaters
and talk about things as if they were authorities on the subjects.

A few of my favorites:

1. A guy is on the repeater talking about some "dx" he heard on the
repeater the night before. He mentions how he thinks the snow and
sleet "helped" propagation the night before.

2. A security guard whose company is too cheap to provide him with a
company radio or cell phone "checks in" on a regular basis with
another security guard. SG#2 has explicit instructions to "dispatch
the fuzz" should he (SG#1) not check in on time.

3. An "instant-extra" was recently on the repeater asking anyone if
they knew how to make a dipole (how long to cut the wire and do I
need a balun?)

--

Now, mind you, when I get on the air, people probably find the
conversation boring too. I tend to talk politics, sociology, and
history and current events with people. But, at least I like to
think that my conversations are more intellectually stimulating than
"Joe, if I don't come back on the air in 10 minutes, you know
what to do. 10-4?"

```
**********************************************
* *
* Cub Scout Camporee Special Event Station *
* *
**********************************************
```

The 1995 Cub Scout Camporee in New Rochelle, NY will be having a special event station set up as a stop for each cub scout to visit. This station will be operational between 1300 zulu - 2230 zulu (9AM EDT-6:30PM EDT) on Saturday, May 13, 1995.

Any and all contacts will be appreciated. QSLs will be sent to all stations. The callsign will be the callsign of the Westchester Emergency Communications Association, WB2ZII. The following bands and modes will be used:

HF 40M CW (Novice Frequencies: 7.100-7.150)
40M SSB (General/Advanced Frequencies: 7.200-7.300)
20M SSB (General/Advanced Frequencies: 14.200-14.300)

VHF 2M FM (WB2ZII/R: 147.060 +600Hz 114.8 PL)
2M Packet (Using the QSO:N2MH-11 WorldWide Chat Node)

UHF 70CM FM (WB2ZII/R: 447.475 -5MHz 114.8 PL)

Please spread the word among your fellow HAMs! Thank you for reading.

It appears that the last hope for new amateur blood (ie. Packet Radio, and
the abiltiy to commuincate easily through "wormholes" to the rest of the
world) is about to fade away. What will they do to the amateur bands when
there are no amateurs left? Maybe that's what they are hoping for?

many cases it
>shows streets, farm lanes, driveways etc.

The company is DeLorme Map Co. of Freeport Maine. They have been selling
a full GPS system for some time. The map data is *very* good and the
entire US is on one CD. They sell one package for as low as $99, but I
suspect their XMap product runs more.

While unable to directly answer your question, I can offer my tips about pc-rfi. I wrapped several ferrite split-cores on every wire and cable inside my machine. This reduced the noise quite a bit. Also getting a good bond between the case, power supply and motherboard. Now only some highly active graphics cause interference. My line-voltage cables also have ferrite cores and are shielded. My GASFET is mast-mounted however. Best of luck.

Ahhh not correct...

to reset the factory memory, you do the MR and VFO buttons..

to open the 800Mhz band up after the jumper removal, you hold
down the UP and DOWN arrows while powering on....THIS resets the
band edges and also turns on the 800-950 Mhz band...

>>I am looking for some programs that will read the NMEA output from a
>>GPS and GPS then plot my location on a map.
>>Please let me know any suggestions on any program

GP>last I knew. Lots better than APRS, but much more expensive. You
GP>can actually drive around town with this system and see where you are.

Your right to a point Gary, The DeLorem software is CD-Rom based so
would require a laptop with a CD. So between the cost of the DeLorem
package and the laptop CD your talking well into the $900.00 - $1100.00
area. Now i have been an APRS user from the start and there are several
users around town here that use the system with a laptop and all it cost
them was the price of registering APRS, By the way the latest version
is APRS68c.zip. The registration fee is $24.00, but it can be run fully
without registration. As far as the maps go that's up to the user, we
have some street level maps that are as good as the ones you speak of.
By downloading the maps available from the USGS on internet you can
have the exact same maps that DeLorem uses, it just takes a little time
to convert them. In fact if you own a Macintosh creating the street
level maps becomes very easy because it will make maps for both the Mac
and Pc's. By the way i spelled DeLorem wrong it's DeLorme. I have their
Street Atlas USA Cd-Rom and the maps are great but no better then you
can have with APRS if your willing to do some work to save money.
You stated that with DeLorme you can actually drive around town and see
where you are, Well you are describing APRS to a "T".!

Don-

I would love to hear any information about 900 MHz receive for this radio too---mine is deaf there so far as well. Please let me know if you hear anything. As for transmit expand, there is a diode you can get from Icom that goes into the empty D23 location on the logic unit. The part number is MA132WK. There is also cross-band repeat: put on the keypad lock ([Func]-[Lock]). Turn off the radio. Hold [Func], [Moni], and [RPT-M] while turning on the radio. You are now a repeater between 2m and 70cm. Note that I do not take responsibility for what happens if you try anything I mentioned. There is more info on the ftp sites: ftp://oak.oakland.edu/pub/hamradio/mods/icom and Buffalo (I forget the details). Good luck and keep me posted!

I'd have to say the worse offender in this area is the monitor..
even a new model MPR-II rated, energy star, etc. monitor still has a
considerable RF problem. My monitor is >6 ft from the RIG, I still get
considerable noise in the 40M band from it. It would great if I could
leave it off, but what about packet? I've gone through some basics
to help the problem, including routing power cables away from the monitor,
sourcing power from another circuit, making sure everything is grounded to the same point,
etc. Granted, the ground in my place is not top-notch -- I have
a non-ground outlet house, and run considerable line to the nearest copper
pipe.
Dunno, seems like there could be a bit less radiation from that
monitor -- 6ft meets FCC class B standard anyhow.

DX Bulletin 25 ARLD025
From ARRL Headquarters
Newington CT May 11, 1995
To all radio amateurs

SB DX ARL ARLD025
ARLD025 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, Tom, AL7EL, Mauro, IK1CJO, Murray, WA4DAN, Glenn, KB1GW, and Contest Corral from QST. Thanks to all.

MALAWI, 7Q. Peter, ON6TT, will serve as a Red Cross telecom consultant for a month starting May 11. He holds the call 7Q7XT. With family in tow this time around, his operating time will be limited. Listen for him on 40 through 10 meters. QSL via ON5NT.

WAKE ISLAND, KH9. Tom, AL7EL, should be active May 17 through 24 on 80 through 6 meters. QSL via AL7EL or the KL7 bureau.

ZAIRE, 9Q. Alex, PA3DZN, AKA 9X5EE, should be active on 160 and 80 meters. As a telecom crew member in Goma, his stay in Zaire will be for about a year. No call sign has been announced as of bulletin time. QSL via PA3DLM.

RWANDA, 9X. Mark, ON4WW, is now signing 9X/ON4WW. Two inverted L antennas for 160 and 80 meters radiate his primarily CW barefoot signal. Try 0030z on 1827 kHz. He has been worked on 14020 kHz at 1845z. QSL via ON5NT.

NAURU, C21. Ron, ZL1AMO, is active signing C21/. Reports indicate he has canceled his trip to ZK3. He is mostly on between 0900 and 1330z with 80 and 40 meter CW.

KERMADEC ISLAND, ZL8. Barry, ZS1FJ/G4MFW, should be active as ZL8/G4MFW until May 15, with SSB only on 75 through 10 meters. Antennas will be a tribander for 10/15/20 meters and wire dipoles for 75 and 40 meters. QSL via KA1JC only.

FAROE ISLAND, OY. Claus, DK9FE, will activate OY/DK9FE from IOTA EU-018 July 10 to 27. He will operate mainly CW on 80 through 10

meters. Check 15 MHz up from the band edge. QSL via CBA.

ITU GENEVA. Listen for 4U0ITU, May 13 and 14 operated by IK1CJO on RTTY and SSB, and IK1QBT on CW. QSL via home calls.

SAINT PAUL ISLAND, CY9. Ron, AA4VK, Murray, WA4DAN, Bob, KW2P, and Vance, W5IJU, will sign their calls /CY9 July 27 through August 2 on 160 through 6 meter SSB, CW and RTTY. QSL via WA4DAN.

THIS WEEKEND ON THE RADIO. The ARRL Spring Sprints on 902, 1296 and 2304 MHz are this weekend. See pages 123 and 124 in March QST for full information.

The Georgia QSO Party runs 1800z May 13 to 2000z May 14. GA stations will exchange signal report and county. All others exchange signal report and state, province, or DXCC country. Logs go to WB4EVH July 21.

The Volta Worldwide RTTY Contest is a 24 hour event that starts at 1200z Saturday, May 13.

SB DX ARL ARLD023
ARLD023 Size Rule and BS7H

The DXCC Desk announced today that the recently adopted DXCC minimum-size rule went into effect on April 20, 1995 when it was publicly announced by the ARRL Awards Committee. The rule will apply only to country petitions received by the DXAC on or after that date.

The petition for Scarborough Reef was in the hands of the DXAC before April 20. For that reason, the rule will not be applied by the DXAC in its deliberations and voting on the Scarborough petition.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 11/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 11 MAY AND FORECAST FOR 12 MAY - 14 MAY

1A. SOLAR SUMMARY
Activity: Very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 77/16

GOES satellite data for 10 May
Daily Proton Fluence >1 MeV: 2.6E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.2E+09 (very high)
X-ray background: A3.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
12 May 13 May 14 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 12 May: 78/17

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 10 May
Learmonth 5 2122 2112
Fredericksburg 9 5
Planetary 8 6

Observed Kp for 10 May: 2212 2122
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
12 May 8 Quiet
13 May 8 Quiet
14 May 8 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

11 May normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
12 May normal normal normal
13 May normal normal normal
14 May normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
11 May 22 Near predicted monthly values with sporadic E
observed at 16 and 18 UT.

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
12 May 20 Near predicted monthly values
13 May 20 Near predicted monthly values
14 May 20 Near predicted monthly values
COMMENT: MUFs at Townsville were near predicted monthly values with
sporadic E observed at 1700 UT. MUFs at Hobart were near predicted
monthly values with sporadic E observed at 05, 15 and 1600 UT.

2814. PC Controller?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-11 00:00:00 UTC
From: rheaume@humnet.westonia.com
Message-ID: <7851262996001@humnet.westonia.com>
Source record: 246629

I'm looking for software which will allow me to
use my old PC XT which is gathering dust as a
repeater or link controller. Anyone heard of such
a thing?

Thanks, de Tim VA3FU

NFX v1.3 [000] Graphic Offline Mail Reader.

[[EXAMNT5.03W : 3126 in EXAMNT5.03W]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

* Effective - December 20, 1994, prospective licensees and upgraders can call the FCC at 1-800-322-1117 to learn whether or not their pending FCC Form 610 license application has been processed, and if a new license has been granted. If a new license has been granted, the person can begin immediate on-the-air operation (using their FCC-issued call sign) with the privileges of the new license as indicated by the FCC (during the telephone inquiry). The hardcopy (printed) license would follow shortly after the license grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround time will be approximately 7-15 days. This includes 1-5 days for the VE team to complete their processing (the team has up to 10 days before they must mail the results), 3-5 days between the VE team and the VEC; 2 business days at the VEC (in some cases only 1 day); and 1-3 business days at the FCC. Allow 5 business days from the date that the VE team estimates the test session results will reach the VEC.

****

The following test session information is provided by the ARRL/VEC for the upcoming eight to twelve week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending

the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC which is coordinating this examination. This single-character designator denotes the VEC as defined below. An "A" (for example) indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not find any examinations listed for your area, you may contact any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1995 test fee is $5.90.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1995 test fee is $5.90.

>It appears that the last hope for new amateur blood (ie. Packet Radio, and
>the abiltiy to commuincate easily through "wormholes" to the rest of the
>world) is about to fade away. What will they do to the amateur bands when
>there are no amateurs left? Maybe that's what they are hoping for?

Do you mean to say that new operators in Australia are only interested
in packet? Why not introduce them to the dozen or so other modes?
CW and SSB do a great job for worldwide comunication.

Lets look at this a little differently. This is not a NET COPS issue.

What you are seeing is the local citizens here in these groups trying to clean up the graffitti and posters on all the telephone poles in our neighborhood. The NET COPS can't touch all that graffitti, they are too busy being NET COPS.

I don't think any of us mind a commercial poster with some new information or a new product to sell. You can't ignore it!

Just what does a new cd-rom of amateur programs found here on the internet, have to do with Amateur Space, Policy, Digital, Antennas?

This graffitti should be seen in rec.radio.swap where there is no confusion about the commercial nature of the offer.

Would you like this graffitti problem in your neighborhood? The inner cities look like Hell, because no one cares. These commercial cd-rom folks will stop advertizing in our Amateur Radio Magazines and post here for Free. Do you want all the nuts and bolts magazine ads in our news groups? Hunderds of those little ads every week over and over. Then no more ham magazines...

Almost as bad as the SALE@ALLUS on amateur packet. Does anyone really read all that junk? Oh Sure! go eat a cookie.

Bob ;-)

the magic property of 13 wpm over 10 wpm is that when once learned at 13,the code will never be forgotten. for example, 25 years after the end of WWII I was talking
to a aircraft radio op (non-ham) who had never given any thought to CW after discharge....he then looked at a sign and started calling off the CW characters for the letters. Learn at 20 and you can be away for years, listen and copy at least 15 wpm.

I've missed the first part of this thread, guys, but I'm confused.
What's so dumb about people using 2m to chit-chat as they might over a
cup of coffee? I've been a ham for 43 years and find _constant_

equipment or ham operation-related conversations to be B-O-R-I-N-G !! One of the few things I've found to agree with Wayne Green (73 Mag) on is that too many hams have forgotten --or never learned-- the art of conversation.

Many hams use the FM bands to keep in touch with good friends who happen to be hams, and are liable to discuss any common interest from good places to eat to traveling to a football game they're both watching to yard work. Just because someone overhearing that conversation doesn't happen to share their interests, hardly makes their conversation dumb? (Nobody HAS TO listen...that's why God created channel switches!)

Lengthy rag-chews belong on simplex frequencies. If that's the issue, I agree. However, spending A FEW minutes on a local repeater chatting with some friend who is beyond simplex range is hardly a crime.

As I said, I may have missed something... if so, please enlighten me. Taking what little I've read at face value, though, I would have to say to those who can't take such idle chatter, "Lighten up! This IS a hobby" ... to those who feel all ham radio conversations must be equipment or operation-related, "Get a life!"

Just one ham's opinion...

Ed, you didn't miss a thing in your observation of the thread. I was originally licensed in high school and the first 100 or so QSO's were asking for RST and what rig are you running as well as explaining our setup. Fine for starters. As we became more deeply inducted into the "Ham Art" that soon changed to the local events and national event discussions. And personally I wouldn't mind knowing about the best donuts in a town. This is what makes Ham radio personal and not so cold and sterile as my non-Ham friends think we are.

My friends were a little surprised when we told them of playing chess on 75m with a Austrian Ham. (Something I really miss, chess on the air.)

After a 15 year absence I have rejoined the ranks (and I am waiting for the 600-V forms to get my old call back) and I was shocked to hear the sterile conversation for the first few weeks, until I located the local rag chew on 10 meters. The talk of WWII battleships and submarines lasted for hours. I will agree that this wasn't on 2m or a repeater, but if it was so what? Having the repeater activley used just means that an emergency traffic would be heard as well as responded to.

Whatever you do Ed, keep the "Friendly Ham" image alive. And if you are asked on 2m where the best donuts are in town, it just might be me!

Mike, KB9KFE

2829. location of the hamfest on Sat, Melbourne

Dear Ham Friends in Melbourne, Australia:

I was told that there will be a hamfest in Melbourne, Australia on Sat 13/05/95 (that's a day away). The address I got was in Ridgeway School, Glen Waverly, near Heath Street. I can find Heath Street, but I am unable to locate the Ridgeway School on my Melway. If you hapen to know the event, please drop me an e-mail or a phone call on (03) 9899 2860 (home), (03) 9344 7416 (office), 015 351 198 (mobile).

I have told several of my friends about it and they are also intended to go. Please reply this message as soon as possible so that I could inform my friends.

Thanks in advance for your help.

Commercial Radio Exams at Hosstraders

** MROP, GROL, GMDSS, Radar and Telegraph exams in Rochester NH **

** Sat. May 13th 1995 **

The MIT Radio Exam Team will hold exams for all classes
of commercial radio license at the Hosstraders Hamfest
in Rochester NH on Saturday May 13th at 1:30 PM.

We will conduct exams for the General Radiotelephone Operators
License, the Marine Radio Operators Permit, the Global Marine
Distress and Safety Systems Maintainer and Operator Licenses, the
Radar Endorsement and the Radiotelegraph operators Certificate.

This may be your last chance to take aquire a commercial license
before the exams are revised in July. It is rumored the GROL will
be made much more difficult.

If there is sufficent interest we may schedule a June exam session in
Cambridge MA.

Our next commercial exam session will be held at 10AM on
Saturday July 8th in Cambridge MA at 77 Mass Ave in
MIT's Room 1-150.

A regular schedule of exams is planned for Cambridge MA on the
second Saturday of odd numbered months. For more information call
Nick at 617 253 3776 (9-5).

There is a $35 examination fee. Bring the ** original ** and a
copy of any commercial license or proof of passing certificates
you want to claim credit for. Also bring 2 forms of picture
ID, a black pen and a pencil. For all licenses except the GROL
there is an additional $35 regulatory fee, you must attach a check
made to the FCC to your successful application. For the
Telegraph exams bring 2 passport style photos in an envelope to
attach to your application.

* The FCC has delayed the imposition of a regulatory fee on GROL
applications pending congressional instruction on how to treat lifetime
licenses. !!!

Copies of the question pools are available from the
Government Printing office or from W5YI at 1 800 669 9594.
This is probably the best study guide available for the
GMDSS, Radar and Telegraph exams.

* A comprehensive text book by Fred Maia and Gordon West covering the MROP and GROL exam material is now available at Radio Shack.

The General Radio Telephone Operators License is required to service transmitters in the aviation, maritime and international radio services. A Maritime Radio Operators Permit is required to operate radiotelephone stations aboard ships carrying passengers for hire and certain aviation and coast stations. Large ocean going ships will be required to carry two Global Maritime Distress and Safety Systems - operator licenses. A GMDSS Maintainer License is required to service GMDSS equipment. A Radiotelegraph Operators Certificate is required to be a radio officer aboard certain large ocean going ships.

Amateur Extra Class operators may be particularly interested in obtaining a commercial telegraph license as they will receive credit for the required class code exam. Bring your original amateur license and a copy to claim this credit.

The MIT Radio Exam Team operates under the auspices of the National Radio Examiners COLEM, part of the W5YI group.

Ralph-
It is most definitely NOT legal to operate at the 10 watt level, widespread or not! One previous poster advised you correctly that the maximum power out is 100 mw. I will add that the maximum antenna length is limited and there is also a field strength limitation. Details can be found in Part 15 of the FCC rules.

You can probably buy a kit from the Ramsey catalog that will do exactly what you want, but for a bit more money than that you can do much better and avoid sniffing solder flux fumes. Our church uses a commercially built unit bought from somebody in California, price was about $300, but of course I forget the mfgr name. It came as two small Handi-boxes with 50 feet of shielded four wire cable between the transmitter and audio/pwr sply; the cable shield also serves as a ground counterpoise for the antenna! You must specify the desired operating frequency when you order.

This particular model includes about 30 dB of audio level compression on the input, so soft-voiced lay speakers come out with the same modulation percentage as the pipe organ with full choir. The antenna runs vertically for about ten feet and our signal can be heard at least half a block away on 530 kHz. We picked 530 because the Cleveland airport has a traveler's advisory station on 1610 just two miles away. With the broadcast allocation expanded to 1700 you will also probably want to pick the bottom of the band, but the hash noise from lamp dimmers and switching computer power supplies is at least 10 dB stronger down there.

> it. Any answers?
>
> Curtis Wheeler - San Ramon, CA
> KD6ELA / GROL / Pvt. Pilot

Nope, that does not violate any previously referenced rule. In fact I run
exactly that configuration in my vehicle, along with some military freqs
for which I am personally authorized. As long as I the user cannot change
the programmed frequency (which per 90.203g can only be entered by the
manufacturer, service, or maintenance personnel) I have not violated the
type acceptance. Therefore the unit can be used legally on Part 90
channels, the ham bands, and those military freqs where the FCC T/Ad
transmitter is considered acceptable.

You are PROHIBITED (see 90.203g again) from leaving the programming jumpers
in place or ,modifying the unit so that it can transmit while in the
programmable mode. That was the scenario proposed for the Icom commercial
unit, and it is a clear violation.

You have some very good points Ed but what you "missed" was the ongoing "no-code techs are evil" issue. I maintain that it isn't the operating class that determines the worth of an operator but rather his* intellect. (*gender non-specific)

There are so many people who get on the air and just drone on and on and on about minutia. What really drives me crazy is when some butthead keys up and THEN thinks ("ahhh...") about what he's going to say for 15 to 20 seconds before the first word come out of his toothless mouth.

Then there are the people who think they are "cool" and despite being fairly inexperienced, feel the need to have a presence on EVERY area repeater. They call in unnecessarily-redundant weather info during "storm nets" just so everyone can hear them on the air (of course the wind is always blowing 20 mph faster and it's raining like a monsoon at their QTH) and in general they just have annoying radio manners. There's one guy who repeater hops. He'll have a conversation and then once he's pissed off enough people, he moves to the next. I'll bet he hits three or four repeaters and hour for a couple hours and then starts all over.

I'm a pretty easy person to get along with but I'll tell ya, there are some calls that have been indelibly burned in my memory. If I ever meet these morons in person, I'd like to sucker punch one of them...1/2 :)

Bottom line: Nothing wrong with casual conversation. I agree with you Ed, all tech-talk can get boring. My first post that started this particular thread was focused on really boring hams who are boring on the air because they are boring people. I think people need some balance in their lives. That's why I think amateur radio needs to attract a more diverse group of people, including youngsters. If "the cancer" continues to spread, we'll end up with VHF CB. If we tactfully discourage poor operating procedure ON THE AIR then we will, if nothing else, make people think about it. Those who continue to abuse the airwaves will do so because they are low-class individuals, but NOT because they lack insight or training.

Am seeking information on a secret, WWII-Pacific signal gathering outfit, probably called JASCO, which put two-man, seal-type units onto enemy held islands. A late relative, Robert A. Harrell, Madison, Wi.-native, was a civilian radio electronics technician minding his own business when war broke, and was whisked into this interservice group. It had top requisition priority and may have operated directly under MacArthur's command. JASCO may have stood for Joint Armed or Allied Serices Communications Organization. Recent internet communications have disclosed JASCO also stood for another outfit which accompanied landings in both theatres, with members sometimes ranging behind the lines. Harrell was involved in about 30 missions. The feats of these men, like the coast watchers, was extraordinary and should be told. Any data will help. Harrell went on after the war to found Bay Electronics, San Francisco, a small, successfull mfgr. of marine and aviation antennas, selling throughout the W. Coast till the late 1960s. He also rose to major in communications with the Civil Air Patrol in San Francisco and Sacramento. Thanks. John Pearson, 10324-1/2 Holman Rd. N., Seattle, 98133.

Howdy,

From what I can find no one has attempted to port this program to the 3b1 before. I have decided to take on the the task and have had some success. I encountered problems with TCGETS and TCSETS which are berkeley unix but think that TIOCGETP and TIOCSETP are the same? The program seems to work. I also found that the program uses bcopy which is also berkeley. I substituted strncpy, are these functions similiar enough for this to work? The only problem I seem to be having is when I exit the program I have to type ctrl-j for a carriage return and things get messed up? I have to log out and back in to fix this? Any pointers as to what could be causing this?

Design is not the problem with the R.S. stuff in some cases, the
problem is the quality of components and manufacture. By the way R.S.
designs very little anymore. Most of the stuff is designed by the
R.S. contractors.

I know that most other retailers are not marking up their goods beyond
keystone. Jewelry, I don't know about or care about.

>>Duffy
>
>Say Duff, did RS turn down your credit application? Your anti-RS posts
>lead me to believe you have some ax to grind. You used to work for
them -
>did you get fired?

Jeffy, I worked for RS for five sickening years. Never got fired, but
I did quit in December of 1977. Just could not take the way they ran
their company. In fact, I was one of the few employees at the retail
level they begged to keep and the only salesperson in the entire
district that made it through five years without getting fired.

Turned down my credit application? Get a life! Who needs credit from
RS if you don't buy anything from them except little stuff. I would
venture to say that my income exceeds yours. You may need credit at a
21% interest rate. I guess people with poor credit ratings have to pay
higher interest rates and that is why they must go to the stores to get
credit. I you really using one of those RS credit cards? Can't
believe you are paying those interest rates! But if that is the only
credit you can get....well I understand.

U U U S S S
ISLAND
i s l a n d s

DX by John Reisenauer, NL7TB
RT 2 Box 2161, Benton City, WA 99320 USA
(509)588-3122
official bulletin of the United States Islands Awards Program (US I)
**********************************************************************

Thank you for taking time to read this, and welcome to a new island
collecting program. US I is the first island program established
exclusively for collecting fresh-water and saltwater islands of
the fifty states. The program, complete with award certificates
and plaques is open to anyone interested in state island collecting.

More islands have been activated for US I. It was nice to QSO with
the following island enthusiasts. Thanks for your efforts!
AK1L Ray on Vinalhaven Island, Maine US I# ME-16S
K3VMX/4 Bill on Hateras Island, N. Carolina US I# NC-05S
K9PPY/5 Jim on South Padre Island, Texas US I# TX-07S

John, N0ISL (our SC for US call areas 5,8,9 & 0) has been instrum-
ental in advertising for US I. John has posted our "ISLDX" packet
messages on America On-Line and the Internet. Great coverage OM!
I'd like to apologize to the German Hams who have sent me packet
messages. I am ecstatic with your interest in US I and am sorry if
there's a communication problem. Please keep trying. US I is popular
in Europe I'm told! Dave, NS1Y in Rhode Island, sent a packet msg
expressing an interest in US I. We hope to hear him on real soon,
especially from a fresh water island. Bernie, N6DCD on Whidbey Island
(WA-01S), is in the process of setting up the BOD with a new island
data base. Marshal, WA2WZX on Grand Island (NY-01R) sent a couple
610-B forms which I quickly filled out and sent off to the FCC! As
soon as US I receives a club callsign, we'll apply for a vanity call.
Ideas?

John, KG7RS (our SC for US call areas 6,7, KH6 & KL7) will be on from
Rabbit Island in Arizona (AZ-01L) this weekend. This is a practice run
for a bigger trip to Lake Mead in AZ and NV later on- more new islands!
Check for John on 14.250 to 14.260 and on 40 meters as well.
```

...more on the Barren Islands DXped (July 3-6)
It's been approved by the captain of our charter boat in Homer to
bring a partially assembled tribander on board. The beam w/arctic mods
is on loan from the South Central Radio Club (SCRC) of Anchorage,
Alaska. Jim, KL7CC, is kind enough to loan us his 1800 watt generator
as
well. Our 4 man team will run 2 stations from Ushagat Island.
Richard,
N6IV, will provide the other station including a 40/80 meter vertical,
2500 watt generator and an amp. I only hope the captain doesn't panic
when he sees all our gear on the dock, especially the 80 gallons of
fuel!

If you don't have the updated US Island Directory, you're missing
out.
There's been some changes for the good and the island list is quite
large.
We've made it even easier to collect state islands and earn
certificates
and wooden plaques!

The "US Island Directory", our information package including island
qual-
ification criteria, activated islands list and awards description is
now
available for $5.00 US or 8 IRCs elsewhere. This is a must for state

island collecting and activating. Stay tuned to future ISLDX messages
for
new islands activated to update your directory. Thanks to the above
for
their support.

73, Enjoy island collecting!
U S John, NL7TB

---------- Begin of The QRP Clubs List ----------

==========
THE QRP CLUBS LIST The QRP Clubs List
Version 0.98
May 12, 1995
Compiled by Richard Hieber, DL8MFQ/AA8CP.
Email: <sz0026@daphne.rrze.uni-erlangen.de>
Packet: [dl8mfq@db0sif.deu.eu]

~Subject: The contents:

This file contains information about the following QRP clubs:

o 9A-QRP Club
o Arbeitsgemeinschaft CW / Activity Group Telegraphy (AGCW-DL)
o QRP Club ARI
o QRP Amateur Radio Club International (QRP ARCI)
o Benelux-QRP Club
o Grupo-QRP do Brasil
o QRP Club of British Columbia (BC QRP)
o QRP Society of Central Pennsylvania (QSCP)
o Cleveland QRP Amateur Radio Club
o Colorado QRP Club (CQC)
o CW Operators QRP Club
o Durham Region QRP Club
o EA QRP Club
o G-QRP Club (G-QRP-C)
o GW QRP Club
o Italian QRP Club (I QRP)
o JARL QRP Club (JA-QRP)
o MFJ 90's Radio Club
o Michigan QRP Club (MI QRP, M-QRP)
o The QRP Club of New England (NE QRP)
o The QRP Club of Northern California (NorCal QRP)
o NorthEastern Illinois QRP Society (NEIQS)
o The NorthWest QRP Club (NW QRP)
o NorthTexas QRP Club (NorTex, NQC)
o OK QRP Club (from the Czech Republic)
o Oklahoma QRP Club (OK QRP)

o St. Louis QRP Society (SLQS)
o U-QRP Club
o WI QRP Club
o YO-QRP Club
o ZS-Algoa QRP Group

The ordering of this list is somewhat arbitrary though it tries to follow the alphabet :-) No weighing is intended.

Two list entries here are somewhat special:

- The "MFJ 90's Radio Club" is focussed on the MFJ 90xx series of QRP transceivers but not affiliated with the company. Rather than being a club it is more a newsletter and its readership.

- The "AGCW-DL" is not a QRP club but rather a CW club. It is in the list because of its strong QRP activites and because there is no dedicated German QRP club.

In addition to all that you'll also find information about defunct clubs and newsletters, ceased activities, 'unofficial' groups and a small paragraph about the world famous INET QRP Club ;-)

Spelling and punctuation tries to follow European standards.

~Subject: The format:

ABBR: Abbreviation
FULL: Full name
PRES: Club President
ADDR: Contact address for membership and info
SINC: In existance since ...
COST: Membership cost (yearly)
NEWS: Club newsletter, name and frequency
NUMB: Current membership numbers (approximately)
MEET: Regular meeting
QNET: QRP nets, 'on the air' meetings
PROJ: Previous and current projects
TEST: Contests, activity periods
AWRD: Awards
COMM: Comments

The NUMB entry is only meant to give a rough indication about how big the club is. The numbers given are not precise and cannot be. The number of active members is not equal to the last issued membership number - some former members are SK now or have left the club. A good indication of active membership numbers is the number of people that subscribe to the club newsletter.

The PROJ entry isn't meant to be a listing of all the building projects that any club member has ever done. Rather it should list all

the projects that were designed by a club member, were realized by several others and are available as a circuit diagram, kit or whatever. This entry shows you where household names like 'Epiphyte' or 'Sierra' originated.

Similar story with the TEST entry: It is not a list of activities the particular club *participates* in, but rather a list of activities that *originate* within the club. There is no space to give details. By supplying the name everybody can see that a special activity exists which will give him the starter to ask for more information.

I would also like to supply information about regular 'on the air' meetings of the clubs (entry QNET). If you know about such activities, please notify me; my address is at the end of this file.

In this revision of the QRP Clubs List lots of entries are empty, because information is missing. I didn't delete them to encourage feedback so that I can make the list more complete. But I know it looks stupid - so this will change in future revisions of the list.

Addresses in <brackets> are Internet email addresses; those in [brackets] are valid in the Amateur Packet Radio network.

ENGLAND

SINC: 1961, adopted the 'true QRP' power limit of 5 watts in 1979
COST: USA: $14 new member, $12 renewal
DX: 7 Pounds new member, 6 Pounds renewal
NEWS: "QRP Quarterly" (QQ), quarterly (January, April, July,
October)
NUMB: 8.800 (assigned membership numbers)
1.500 (subscribed to newsletter)
MEET: de facto annual meeting at Dayton
QNET: ARCI sponsored nets:
Transcontinental Net (TCN) : Sundays, 23:00 UTC, 14.060 MHz
Western States Net (WSN-80): Sundays, 04:00 UTC, 3.558 MHz
Southeast Net (SEN) : Tuesdays, 00:01 UTC, 7.030 MHz
Gulf States Net (GSN) : Wednesdays, 02:00 UTC, 3.560 MHz
Great Lakes Net (GLN) : Wednesdays, 02:00 UTC, 3.560 MHz
Northeast Net (NEN) : Saturdays, 12:00 UTC, 7.040 MHz
Western States Net (WSN) : Saturdays, 16:00 UTC, 7.040 MHz
Some nets change frequencies and times with the arrival of
Daylight Savings Time.
PROJ: Twofer Transmitter (in the 80's)
TEST: Spring QSO Party, Fall QSO Party, a variety of sprints for
both CW and SSB
AWRD: QRP-25, WAC-QRP, WAS-QRP, DXCC-QRP, 1000-mile-per-watt
(kM/W), QRP-NET (QNI-25)
COMM: The QRP ARCI promotes on the air QRP operation, the use of
designated QRP calling frequencies, regular QRP nets, and a
program of QRP operating awards and contests. Oldest
organisation of its kind; but since the 5 watts power limit
was adopted only later, the G-QRP Club is arguably the first
real QRP club still in existance.

~Subject: Defunct clubs and newsletters, ceased activities:
---

o QRP society of the UK (1949-1964?)
o Pacific Amateur Radio Group (?)
o Illinois QRP Society (ILQRPS) (?)
o "K5FO QRP newsletter" (1994)
o "The Milliwatt" (1970-1975)
o EA8 QRP-DX Club

~Subject: 'Unofficial' groups:
---

o The DRAGONSLAYERS QRP Group

This is mainly a Dutch group of amateurs with guest members from two other countries only. Dick Pascoe, G0BPS, is the only British member. Three Germans are also members being a family, husband, wife and son. There are no membership fees, no magazine, no contests etc, just a group of friends. Membership is by invitation only!

o Zuni Looper Mountain Expeditionary Force

This is a local gathering of QRP ARCI members in Southern California, who operate Field Day with QRP; the name refers to the particular part of the State or National Park they always operate from (the Zuni Loop area of the park). They are well known and admired for the *HUGE* wire antennas they erect.

o Maryland Milliwatt Club

The club was founded in 1992 by two members. Membership is by invitation only. Mailing Address: Maryland Milliwatt Club, 3052 Fairland Rd, Silver Spring, MD 20904.

o World QRP Federation (WQF)

The only thing I know is that Gus, G8PG is president. I suppose it's a kind of QRP cover organisation. Can anyone give more info on this?

o The WVQRP Commandos

o The LIMARC QRP Heavy Hitters
(LIMARC = Long Island Mobile Amateur Radio Club)

o Old Coots QRP Group

~Subject: Acknowledgments:

I was using the club list maintained by Bill Kelsey, N8ET, as a basis for this list. Much later when perusing the QRP-L archives I discovered that Chuck Adams, K5FO, had already compiled a list which contained clubs that I didn't know about. Additional information came from other contributions to QRP-L and from assorted printed material, most notably publications of the G-QRP Club. Thanks for very helpful contributions and corrections from (sorted by callsign):

provided herein. The editor takes no responsibility for any damages
resulting from the information provided in this list. If you are in
doubt, please post a question to the QRP-L mailing list or ask your
local elmer :-)

~Subject: Update information:

This is what I call a beta version of the QRP Clubs List. I intend
to make this list up to date and as complete as possible. Therefore
I need your help.

If you find outdated information or errors in this list, please let me
know. If you know of any QRP club that you feel should be in this
list, then let me know, too. The same applies if you have ideas on how
to improve this list. Since English is a second language to me, I'd
also be grateful for hints on mistakes with grammar or vocabulary.
Please note that I try to stick to European conventions in spelling
and punctuation 'cause this is what I learned in school.

For the most up-to-date copy of this list, send email to
<sz0026@daphne.rrze.uni-erlangen.de> or a packet radio message to
[dl8mfq@db0sif.deu.eu]. From version 1.00 onwards this file will be
available via a FTP site also (probably SUNSITE.UNC.EDU).

2851. RE: Sunspot Numbers?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-12 00:00:00 UTC
From: Torpor@Fnalv.fnal.gov
Message-ID: <3ovnfd$rr5@fnnews.fnal.gov>
Source record: 246543

Someone asked for a crash course in explaining what the
SOLAR FLUX numbers, A & K scales mean. I hope this helps.
The following charts, text, etc are based on information
obtained by SESC manuals & documents.
(SESC = Space Environmental Services Center in Boulder, CO)

The SUNSPOT number is a daily index of SUNSPOT activity which
show up as black spots on the Sun's surface. The spots are
really concentrations of the Sun's magnetic activity.
When the Sun erupts with spots, intense radiant energy (X-Rays,
Gamma, and such) arrives at Earth 8 minutes later, after the
eruption. This affects the "F" layer(s) above the Earth, which
affect radio propagation.
Daily measurements are made of the "F" layer(s) by beaming
straight up at local high noon, a 10 centimeter radio beam and
measuring the return signal, similar to radar. The return signal
gives an indication how ionized (or thick) the "F" layer(s) are.
That number is referred to as 10cm SOLAR FLUX.
There is a rough equivalent of SUNSPOT activity vs SOLAR FLUX.
The following BASIC program will give a close equivalent of SOLAR
FLUX numbers to SUNSPOT numbers. (The resulting chart is also
included.)

```
100 print "Solar","Sun Spot"
print "Flux","Number"
print "-----------------------------------------------"
for sf9=60 to 500 step 10
s9=-87.398+(1.46*sf9)+(-1.15697e-3*(sf9^2))
print sf9,s9
next sf9
```

```
Solar Sun Spot
Flux Number
-----------------------------------------------
60 -3.963093
70 9.132847
80 21.99739
90 34.63054
100 47.0323
110 59.20266
120 71.14163
130 82.84921
140 94.32539
150 105.5702
160 116.5836
```

170 127.3656
180 137.9162
190 148.2354
200 158.3232
210 168.1796
220 177.8047
230 187.1983
240 196.3605
250 205.2914
260 213.9908
270 222.4589
280 230.6956
290 238.7008
300 246.4747
310 254.0172
320 261.3283
330 268.408
340 275.2563
350 281.8732
360 288.2587
370 294.4128
380 300.3355
390 306.0269
400 311.4868
410 316.7154
420 321.7125
430 326.4782
440 331.0126
450 335.3156
460 339.3871
470 343.2273
480 346.8361
490 350.2135
500 353.3595

If the "F" layer is highly ionized, higher frequencies may be refracted or reflected, hence for example: 10 meter propagation was wild when SOLAR FLUX numbers were in the mid 200's, but now has been flat the past few years because the SOLAR FLUX went from the mid 200's down to 70-80's.

After the Sun has an eruption of SUNSPOTS, hugh amounts of particle matter (literally) get blown off the Sun, sometimes directly at Earth. These particles move slower than the radiant energy (previously described) and arrive at Earth 2-4 days later. These particles are what affect the Earth's magnetic field. As the particle matter screams by the Earth, it causes the magnetic field to change, compress, or move around. When the magnetic field moves, it also disturbs the "F" layer(s) much like a quiet reflecting pond. As long as the pond is quiet, you can see your reflection. If the wind starts blowing, you loose your

reflection to the waves. (To some, this may be an over simplification, but the idea is there.)
The "A" and "K" scales relate to the magnetic disturbance that the Earth suffers as a result of SUNSPOT activity.
The following is a chart based on SESC documents, which equates the "A", "a", & "K" scales with accompanying magnetic disturbance classification.

SOLAR EQUIVALENT SCALE
for K and a INDICES

K Magnetic Activity a
==========

9 ---------- 400

8 Severe Storm Level 240

7 140
---------- 100
6 80
Major Storm Level
5 ---------- 48
Minor Storm Level
4 ---------- 27
Active
3 ---------- 15
Unsettled
2 ---------- 7

1 Quiet 3

0 ---------- 0

Where : K= 3 hour period
a= 3 hour period (same period as K index)

A= 24 hour average of (a) =

$$A = \frac{a(1)+a(2)+a(3)+a(4)+a(5)+a(6)+a(7)+a(8)}{8}$$

Something else which was not discussed was the "D" layer. This layer is affected during daylight hours. The radiant energy from the Sun makes this layer thick and suppresses radio waves passing through it. The effect on the frequency bands are from low to high, for example; most distant AM broadcast stations disappear during the daylight hours and return at night. In fact, daylight frequencies are typically affected up to 5MHz.
Distant radio waves must first pass upward through the "D" layer and get attenuated, then arrive at the "F" layers and get reflected, and then must return through the "D" layer again with further attenuation, hence low frequency signals are attenuated

twice passing through the "D" layer.
Also, a sudden burst of radiant energy from the Sun during SUNSPOT activity will cause further ionization of the "D" layer and cause a radio blackout in some cases, making some of the higher frequencies attenuated as well. Local radio reception is still possible because of direct radio wave reception (local radio signals that don't pass through the "D" layer).
This condition may last from a few minutes to an hour or more. When the radiant energy from the Sun ceases, the "D" layer will quickly de-ionize and return to normal. When the Sun sets, the "D" layer will disappear altogether in about an hour.

2853. Scout-A-Rama Radio Station

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-12 00:00:00 UTC
From: murso@fnalv1.fnal.gov
Message-ID: <3p08k7$rvh@fnnews.fnal.gov>
Source record: 246545

In case you get bored and looking for something to do, This Saturday, May 13, 1995 is the Three Fires Council Scout-A-Rama where our up and coming leaders get to show their stuff. Our Explorer Post(s) will be demonstrating WWW and the
Internet. Along with this the new post I am trying to get organized, assosciated with the Fox River Radio League will be operating both a 10m station and a Packet radio station. The 10 m station will be active from 1400 hrs GMT until 2100 hrs GMT. The packet net will be active after 1800 hrs GMT.

The 10 m station will be using 28.400 primarily and we would like you to try and give us a shot if the band opens up. (BTW We will be located about 30 miles west of Chicago, IL.) You can try calling KB9KFE, or W9CEQ (our club call). There will be other operators so the active call may change.

Thanks for trying in advance,

Mike KB9KFE
Fox River Radio League

2854. Wideband receive - Why?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-12 00:00:00 UTC
From: Wayne_Estes@csg.mot.com
Message-ID: <9505121338.ZM18036@SALCIUS2>
Source record: 246546

I notice that one ot the most predominant topics on this newsgroup is modification of radios for wideband receive. Why is this is such an important topic to so many people?

I suspect that a lot of hams just like to modify things just for the fun of it, without actually having a compelling need for the modifications.

But a lot of other people imply that they would never buy a radio that doesn't receive "DC to blue light". Are there really that many scanner freaks with ham licenses?

I don't mean to be judgemental or critical, but what do people really do with wideband receive capability on a "ham" radio?

1. Listen to the NOAA weather channel? (I do this)

2. Scan the local police/fire channels every time they hear a siren?

3. Monitor cellular phones?
(I've done this with my Icom R-1 and it's entertaining to hear things like "Last night was great. I sure hope my husband doesn't find out", but the frequent handoffs make conversations difficult to follow for very long)

4. To call the police dispatcher "just in case of an emergency"
(yeah, right... get a cellular phone and dial 911)

5. VFD, EMS, MARS, CAP, or some other volunteer activity?
(not exactly legal using a ham radio that is not type-accepted)

6. What else?

Are these activities so important that it is worth paying MORE money for a radio that performs VERY POORLY for it's primary function as a ham radio?

I think we are all suckers of the marketing people who advertise that we can't live without these "features" that ruin the performance of our radios.

73, (flames welcome)
Wayne Estes WD5FFH

Nobody said they have the RIGHT answers :-).
TS
KN4TX

Whenever I'm stumped I come right out and tell the customer "Gee, that's a tough question and I don't know the answer but 'I don't know' still qualifies as an answer, doesn't it?" It's usually good for a chuckle and my customers appreciate the candor. ;-)

Come on folks, if you want to spend a lot of time dealing with people that have an engineering background then you're usually going to have to go elsewhere and pay a *LOT* more for the products they sell. 8-(

If it bothers you that you know more about the HT than the fellow that's behind the counter then take your business to a commumnications specialist like Motorola. They've got some SHARP people. Or do like I did. Try to raise the average competence of your local store by working there part-time. It's interesting work and you get to meet the darndest people. ;-> (anecdotes later)

I was out of town last weekend but my co-workers told at least three regular customers I'd be in Saturday morning. They'll be in for some technical help. I really enjoy helping and will even engineer some custom solutions but will only go that far if there is the possibility of a reasonable sale behind the work or if I can rationalize it as good customer relations. I work on commission and can gross $8-9/hour but only when I can turn them over quickly. Consultation doesn't always pay very well and often costs me money. $-)

Some questions I've fielded:

"Hey you. I gotta question. My old clock radio quit working so I bought
a new one at the discount store. I want to try to fix this old one.
I think this burned up thing here is bad. What do you suppose it was
and what can I do to fix it?"
"Golly fella, I haven't a clue, but the small parts are in the back of
the store ..... Can I help who's next in line?"

"I just spent $1150 on the big screen TV and VCR at the discount store
and I can't get them to work right. How should I wire them up to
work with my stereo and my old vcr?"
"Follow the directions in the manuals and ask your sales person for help.
Give him the opportunity to earn his commission ..... Next"

Or I could tell you about the young guy that came in one night with his
girlfriend. He appeared to be drunk and quite upset because we didn't
have any resistors with a "R" value, only "K"s and "M"s. He wanted to
buy ONE 41R resistor. He was QUITE certain that was what he wanted because
the value "R41" was silkscreened on his GF's circuit board. I wasn't about
to take the time to argue with him about it so I just played dumb.

It works both ways. ;->

IRTS\NEWS14.MAY

IRTS News for 14th May 1995

CORK RADIO CLUB

Members of CRC ran a very enjoyable operation in the form of a Marconi station near Crookhaven on International Marconi Day. Anthony EI2HY, Mike EI2IB and Warren EI6ETB worked over 750 QSOs with large pile-ups being the standard for most of the 24 hour operation. The station was located on a 200ft high cliff on Mizen Head, in a portacabin kindly suplied by the Mizen Vision Visitors Centre, who have recently opened up the Mizen Head lighthouse as an interpretative centre. CRC have been invited to operate from this location next year, which means that EI5IMD will be a regular call from Mizen Head.

Cork ARC, in association with the E. Cork Radio Group, are pleased to announce that Rob Mannion, editor of "Practical Wireless", will give a talk at the club premises in Wilton Park House, Bishopstown, on 22 May at 8.30 pm. All are welcome to attend what promises to be a very entertaining evening.

EXPEDITION TO INISHMAAN

A number of UK amateurs have announced their intention to operate from Inishmaan, one of the Aran Islands, during the period from 13 to 19 May. This should be of interest to experimenters working the IOTA programme, and also to those working for the "Worked All Ireland" award. Operation is expected to be on all HF bands, and especially on the recognised IOTA frequencies. QSLs for the operation will be looked after by G0OYQ. They will use a Yaesu portable station donated by the Yaesu Corporation to the IOTA committee for use on IOTA dxpeditions.

TIPPERARY RADIO GROUP

County Tipperary and Tipperary ARG were well represented in the 2m Counties Contest on Easter Monday. Tom EI9EZB, Seamus EI8EPB and Jim EI8W operated from home, while Walter EI7EWB/P was 700 feet a.s.l. just north of Cahir, Ron EI6GO/P was in the Comeragh Mountains, Billy EI7GO was in Co. Kilkenny, Hazel EI9ELB/P and Joe EI5GE/P were in the Galtees and Hugh EI2HI/P was in Ballymacadam near Cahir. A busy afternoon was reported

by all stations, with some scoring high in the contest.

The Tipperary ARG's VHF net takes place every Thursday night on 145.450. Members of the group welcome anyone to join the net, and will be pleased to supply new WAI squares. Regularly heard on the net are the squares: R83, R93, S01, S02, S04, S12, S22 and S34. Members of the Group intend to go mobile and activate one new square each Thursday night around 9.00 to 9.30 pm. This will be a good opportunity to work some of the rarer squares.

Rob Mannion G3XFD, editor of "Practical Wireless", will give a talk on 24 May at 8.30 pm in the Group's meeting room over Feehan's pub, Main St., Cashel. All are welcome to come along to the meeting, as Rob is a very entertaining speaker and a good night is assured. Further enquiries may be directed to P.R.O. Liam EI7FE at QTHr.

GALWAY RE CLUB

Galway Radio Experimenters Club operated two stations during the International Marconi Day event on 22 April. EI4MFT was located on the Sky Road at Clifden while the other station, EI4IMD, was located in Letterfrack.Operation was over 24 hours, with over 1,000 contacts being made between the two staions. A sked was set up with the Marconi Institute in Bologna, and both stations had no problems with the contact. Both the vertical and the long wire proved to be very effective over the weekend, and the bands seemed to be in excellent shape for such an operation.

The club will activate the callsign EI4MFT during June and July, including the annual trip to Inishbofin in the week beginning 22 July. This callsign will be heard also in the "Practical Wireless" QRP contest.

The club has moved its venue to a room in the Convent of Mercy, Newtownsmith (the Rally venue), where its regular meetings will be held on the 1st and 3rd Tuesdays of each month. A HF and a VHF station will be installed at this location, with operation planned for three evenings a week.

FRC R AND E EXHIBITION

The FRC Radio and Electronics Exhibition will be held in Jury's Hotel, Ballsbridge, today (14th May), from 11.30 am until 4.30 pm. All major traders sill be in attendance, and some interesting ones from UK. As always it will be a great day out with a wide variety of equipment for sale.

ITEMS FOR INCLUSION

That concludes the bulletin for this week. Items for inclusion in the radio news bulletins should be addressed to Steve Wright EI5DD, c/o Department of Pathology, Regional Hospital, Galway. Fax messages may be sent to EI5DD at 091 24216. All such items will be forwarded to Dave Moore EI4BZ for inclusion in the printed news.

Items for the printed newsletter only should be sent direct to Dave at QTHr, or phoned to 021 632444 (daytime) or 021 883555 (evenings). Items may be sent by packet to EI4BZ at EI7DKB-5, or by fax to 021 632730.

This news is courtesy of EI5DA from the EI Packet network.

The 'A' prefix is not owned exclusively by the United States, but is shared with
several other countries. Some of these other countries have some of the 'A'
call group allocation, and thus these calls are ineligible for issue in the US.

|> > use.

Hams are among the most idiosyncratic and difficult-to-organize
people on earth, and repeater owners even more so. I doubt this situation,
nor that of SCRBBA, will change soon.

Here's one for you: yes, SCRBBA is made up of 'good old boys'. Has
it occurred to you that most of the people with access to hilltops around
LA, including site owners and managers, are in SCRBBA, and like things
just fine the way they are?

Hilltop access is very VERY difficult to get in LA, and most of
those who've got it are in SCRBBA. A new body isn't going to get very far
if none of its members can put up anything but low-level repeaters.

Of course none of this is black-and-white. Sure, some folks not
in SCRBBA would have no trouble placing repeaters. But most of the folks
with hilltop access are already part of the establishment. The point is
not that a new organization couldn't succeed, but that it would immediately
face severe and probably fatal challenges on several fronts at once.

440 coordination is full up in Los Angeles and nothing will change
that except outside force. The FCC is currently completely uninterested in
enforcement of any kind, no matter how severe the infraction, and this
attitude has gotten so bad that even the hidebound, reactionary ARRL has
started publicly scolding the FCC in reply comments...to no effect. And
the ARRL itself has nothing to do with coordination (except for the new
219-220 band, and a first-time conference of coordination bodies they're
trying to organize).

The elimination of SCRBBA is not impossible but it's highly
unlikely.

TCGETS/TCSETS deal with a Posix (?, but not specifically BSD) termios
structure (note "s" on end of name), while TIOCGETP/TIOCSETP deal with
a SVR2/SVR3 termio structure. They aren't exactly alike. You need to
get documentation for both, and figure out the approximate equivalents
for your purpose. That is what is messing up the terminal modes when the
program exits.

Also, bcopy() is closer to memcpy() than strncpy(). The latter also stops
copying when it hits a zero byte, which is *not* equivalent to bcopy().
However, bcopy() works sensibly when source and destination overlap,
while memcpy() may not (but neither will strncpy()). As long as you don't
have to worry about copying between overlapping areas, memcpy()
is a perfectly good substitute. However, there are some additional
differences. At the end of this post are extracts from some SVR4'ish man pages
for memcpy() and bcopy(). Note opposite order of source and destination,
and also different return value, as well as difference in handling of
overlapping copies. SVR4 equivalent of bcopy() is memmove(), which
has same args and return value as memcpy(), but handles overlapping copies
ok. However, you probably won't have that.

There should be libraries on osu-cis (archive.cis.ohio-state.edu)
that supply some of these additional Posix and/or BSD functions. However,
you'll still have to take care of the termio/termios difference yourself.

```
#include <string.h>

void *memcpy (void *s1, const void *s2, size_t n);

void *memmove (void *s1, const void *s2, size_t n);
```

memcpy copies n bytes from memory area s2 to s1. It returns s1.

memmove copies n bytes from memory areas s2 to s1. Copying between
objects that overlap will take place correctly. It returns s1.

==========

bcopy - copy bytes from one area to another

bcopy(source, destination, length);
char *source, *destination;
int length;

The bcopy function copies the number of bytes that you specify from
one memory location to another; this function comes from the
University of California Berkeley UNIX (BSD) system. Unlike the
memcpy function, bcopy behaves well if the two areas overlap. Also
note that the source and destination arguments are reversed as
compared to memcpy's calling sequence.

RETURN VALUE
The bcopy function returns no value.

Ok, I'll bite...

I've been a ham for a few years now, and am one of those folks that won't buy a radio that isn't wide-bandable. My reasons:

I'm a paramedic, volunteer with the local sheriff's department Search and Rescue team, and a volunteer communications technician with my local fire department. As such, there's a multitude of frequencies in the public safety bands that I use routinely.

I own a type-accepted Icom land mobile HT, and use radios provided by various departments for my daily routine and for emergency communications. But the time may come, and has come, when I'm without a type accepted HT, or it fails, or whatever and I need the radio to transmit out of band in an emergency situation that could mean saving a life or property.

I don't routinely use the ham rigs for public safety use, nor do I use the public safety rigs for ham use (they're too much of a pain, not frequency agile, etc). Although given the choice, I do prefer the quality of the land mobile stuff (my current favorite is the Saber III).

As for decreased performance on ham rigs with wide bandwidths, I don't buy this one bit. The Motorola Saber III had over 20MHz of bandwidth with ZERO intermod problems. The mobiles are even wider (146-174 typical on VHF, 440-470 on UHF). If the ham manufacturers would just use some decent filtering sections in their radios, and the hams were willing to pay for it, we wouldn't have these problems.

Instead, folks just say "it isn't possible" and settle for something like the HTX-202, which performs well, but is limited to 4MHz of bandwidth. Because the wider-bandwidth radios suffer from intermod, they draw a correlation between wide bandwidth and poor image rejection. It's simply not necessarly the case.

I guess my dream radio would be as follows:

Saber III case, tri-band (138-174, 420-512 and 800-900 MHz), lots of memories, and the other basic Saber III features. Heck, even just dual band with more memories (120 doesn't cut it for me).

>I know what kind of thing has DIScouraged a number of women:
>Some of the boring QSOs, ugly remarks, rudeness and foul language
>have contributed to this. A lot of women migrated from CB to amateur

I was once contesting with a YL friend of mine, and some bozo comes in right
in the middle of a QSO to Japan with all sorts of rude comments to her.
Before we knew what was happening, another station comes on and says
(in a very authoritative, deep, stern-sounding voice) something like:

"Interfering station, this is FCC Monitoring station WFCC6969697373QSL. You are
violating FCC rule 97.12345 in reference to malicious interference. You are
hereby instructed to immediately cease operation of your station until such time
as you formally answer the notice which will be sent to you and which will
inform you of your legal rights. KE4H**, please continue your QSO, and 73."

The problem stopped immediately, and we continued... with a good laugh. :-)

|> Jeff

Hello Jeff. My name is also Jeff.
In 1990, the radio control model folks changed the rules regarding radios for radio control models. They doubled the number of channels available by slipping odd numbered channels in between the 20 khz wide even numbered channels that we had used for years. This required receivers of higher selectivity, so the outfit that insures us decided that on July 1, 1991 only the new triple conversion receivers would be allowed. Flyers using the old double conversion receivers would not be allowed to fly.

Futaba Corporation, one of the largest manufacturers of RC radios had a deal where you could exchange your old double conversion receivers for the new triple conversion unit for a nominal fee of about 20 bucks. Many thousands of these receivers were exchanged.

A call to Futaba might get you some of these old receivers.
They operate at 72 Mhz.

Futaba Corporation of America - 714-455-9888

Date: 1995-05-12 00:00:00 UTC
From: dale@sequent.com
Message-ID: <1995May12.184720.8569@sequent.com>
Source record: 246565

I requested the legal call sign format and have received several
responses. Thanks much, no need for more.

I now know that the "A" sequence ends at AL7x and also that
no A7xx calls exist for the US. (No "A" followed by any digit.)

I should have waited a day to post and gone home and looked
up the information. Sorry about that.

I did modify my program that generates the legal calls and so
came up with a new list of available 4 character calls.

Thanks for the assistance.
73, Dale.

Gary, the stem word `intercommunicate' was mentioned five times in
Paul's post. At no time did he say `common lanugage'. Unless you're
writing a dictionary with definitions you've invented you shouldn't
go off on some tangential diatribe based on something that wasn't said.
Besides, we've see your `Morse is not a language' file on several
previous occasions.

Why not set up an ftp site and make these files available to those
interested rather than periodically posting them on here?

All my inductors *are* hand-wound. And I've had to make several variable
capacitors. Does this seem foreign to you? You underestimate your
abilities.

And I stand by my convictions: When almost an entire receiver is
available on a chip that receiver in no way should be labeled
`home made'. I think many on here have confused the definitions
of kit and homebrew.

Almost all the computer make interference.
Here are some tips that can help to reduce the interference of a computer

1. The computer should be in a total clossed metal case
most of the computer have a plastic front or case. trough this plastic the
interference leaks out.
2. The metal case of the computer must have a good ground connection
if no ground connection is available try a radiator or make your own ground
connection
3. All grounds should be connected at ONE point (make no ground-loops)
4. Place a netfilter beteen the powernet and the power-supply-unit
most computer power supplies bring a lot of interference on the power net of
your building/group.
5. Every connection out of your computer carries interfernece out of your computer
if you have a modem it will increase the interference ot of the computer.
All devices (if possible) should be places in the computer.
Every line out of the computer works like a atenna.
6. Don't place the computer to near to your receiver/transmitter.
7. if you have different AC-groups in hour building place the computer on a other
AC-group.
8. if you have the money by a Class A product (most of the clones are Class C)
class A devices are the best.

Hopes this helps you in making a good choice for a computer.

Marco M.C.M. van heijnsbergen.

> 73 >< Carl
> K8NHE
>

Thanks for asking exactly what I said and intended to say in my posting. I am specifically saying (paraphrasing 90.203 and its Part 80 counterpart) that if you possess an amateur radio that operates above 25 MHz which does not carry a valid FCC Type Acceptance for Part 80 (Marine) and/or 90 (Private Land Mobile) and you have modified it to transmit on channels which are regulated under Parts 80 and/or 90, the radio is considered illegal and it can immediately be confiscated, whether you were transmitting out of band, merely receiving, or did not even have the radio powered up at the time.

As a clarification, this does NOT mean that receive-only is illegal, just that you cannot TRANSMIT there. Note that Yaecomwood could not import their non-TA'd extended receive HTs for use by amateurs if this was not accurate. It DOES mean that you can't
1) take a commercial TA'd unit,
2) defeat the keypad lockouts which are required as part of the type acceptance,
3) program both commercial and amateur frequencies into the unit, and
4) claim immunity from confiscation and/or prosecution just because you hold an amateur license.

I'm also saying that an FCC official is not the only one who has power and authority to enforce these rules. Customs has delegated authority to impound radio equipment that enters the country illegally, and radio equipment that is illegal under FCC Rules and enters in ANY fashion including personal importation. The USCG has authority (delegated by the FCC) to confiscate radios if a boater cannot display BOTH a valid Type Acceptance sticker on the radio AND a valid P3R Restricted Phone operators permit! Both situations happen on a regular basis and, as Gary points out, they are NOT usually announced to the amateur community at large.

>73 from Hawaii,
>Jeff NH6IL (using Hawaii-made radios!)

Well Jeff, International commerce is fine so long as it is balanced. I did look inside several radios. Those components that had identification should names like Motorola, Texas Instruments, National Semiconductor, Hitachi, etc. So some parts were U.S. and some were imports.

The point is parts are cheap, it's where the final product is made that most concerns me. Parts are not causing the trade imbalance, it is the large finished goods that are really causing the problem.

I have spent over three years in post graduate work most dealing with international trade. Several things I learned: severe trade imbalances cause international instability and the debtor nation has a reduction in the standard of living. So far we are experiencing the later, other nations, past and present are experiencing instability.

I'll be happy to buy any non-American product after a trade balance has been reestablished and Asian countries have opened up their markets to American manufactured products. However, before I will buy any Korean crap, e.g., R.S. products, quality has to be improved. That Korean stuff is far from being competitive from a quality perspective.

Since we're getting off on a tangent here, let's step back and take a look. Even though netiquette frowns on advertising, I enjoy hearing of new products that are closely related to amateur radio. Let's face it...for those of us with 'Net access, we're going to hear about it here well before it hits CQ, QST or the other mags.

Here's something that works for the Linux enthuiasts: a moderated group for announcements, which permits new product announcements, as well as other announcements of general interest to that group. The subject lines for advertising-related announcements begin with "COMMERCIAL:" While I ordinarily dissaprove of moderated groups on censorship grounds, this works quite well. Linux enthusiasts can browse this newsgroup, skipping all posts that are clearly marked as commercials if they wish. The function of the moderator is to keep posts not related to Linux off the newsgroup.

So...I'll pose the question...are we ready to propose adding rec.radio.amateur.announce to the hierarchy?

Thanks guys...

This NET-COP phenomena is the damnedest counter-productive thing I have ever seen. If I was truly spamming the groups with some trash, I would love every netcop that jumped on my posting. Hey, in advertising, any press is good press. Let's say I only intended to post just once but I made a mistake and it took a couple of postings to correct that. I would have only created three postings about as long as this one is. If that was all, I would be worried about getting enough exposure. BUT NOOO... I can count on at least a half dozen jerks with their heads up their butts jumping on my case and keeping my ad running for at least a couple of weeks. It doesn't even matter whether or not my "ad" is relevant to the newsgroups I post it in. I certainly welcome the quarterly, less than 1k, posting about the Ham CD's. Even if I hated them, would I want to have the newsgroup cluttered with 100k of netcop ranting? A good cop understands some human nature and knows when to let things slide or when to just let go...

: Marc Grant (mcgrant@bnr.ca) wrote:

: OK, maybe I need to read the FCC regs again, but it was my impression that
: anyone could establish a repeater anywhere, and on any frequency. This is
: as much true on 440 or anywhere in the VHF/UHF spectrum as it is on HF; that no
: individual has claim to any particular frequency.

Actually you're sort of right. Anyone can put on a repeater up any of the
repeater bands without coordination unless they cause interference to a
properly coordinated repeater. If they do, and the coordinated repeater
complains, the FCC may elect (and has a number of times) to send them a
citation requiring them to end the interferrence. The letter usually
states that they, as the uncoordinated repeater have the "primary"
responsibility of correcting the problem while the coordinated repeater
has only a secondary responsibility.

: : The Texas VHF Society (TX coordinators) have been doing an admirable job
: : lately of waking up sleeping frequency occupiers, letting them know that
: : it's "use it or loose".

: Again, on what authority? It still seems like cooperation on frequency
: coordination is voluntary.

Mostly, but if a coordination is revoked because of non-activity, and a
new repeater IS coordinated and is inteferred with, then the above FCC
actions could apply. I think in __most__ cases, however, the people who
never put on a repeater are voluntarily letting go of the coordinations.

By the way, the FCC NEVER likes to hear from hams. They have bigger fish
to fry than us (like running Billion $ auctions <grin>) and very little
budget to do it with. I would hope any complaints to them are only done
after every other posibility is exhausted.

>>Duffy

For both of you, I suggest that the same would be true of the
folks from the "YaeComWood" consortium and quite possibly from TenTec
as well, or R.L. Drake, or..... well, you get the idea.

Whatever anyone wants to think of Rat Shack and some of their
more dumb in-store policies, I think they at least deserve an "E"
for effort in getting into Amateur Radio at all. Even if their motives
were pure profit in taking advantage of the large numbers of
no-code techs, if we make it profitable for them to continue doing
so it will make life for a lot of hams a great deal simpler in
terms of having more outlets to acquire some gear.

While I doubt that we could expect RS to ever market a
10-80 meter all mode rig, some expansion seems likely in their line.

I bought my HTX-202 for $189. I wouldn't call that a huge mark-up.
The HT has worked flawlessly and is considered by many to be one
of the most solid 2M performers on the market. If you would get
rid of your bitterness, you might gain some objectivity.

ejuge@ix.netcom.com (Ed Juge) writes:

>We're in a global economy, Duffy. If you want to compete, you buy
>where you can get the best products at a competitive price.
>Electronics is no longer an American industry. What happened to Swan,
>Hallicrafters, National, Johnson? Few US companies manufacturing in
>any field do not use foreign parts or have their products built
>elsewhere.

But let us NOT forget that the Japanese (among others) were
pretty conclusively proven to have dumped large quantities of
various types of electronics into the US market at the expense of
high prices in their own country. This "dumping" was heavily
responsible for the demise of several american electronics firms.
Granted, some of these firms were excercising poor management
practices and inefficient operations. That still does not excuse
the deliberate targeting of an entire industry for destruction.

And at the same time, the incredible trade restrictions that
the Japanese placed on american goods prevented us from exporting
much of anything to *them*.

So while many US manufacturers met their fate in part by
their own stupidity, let us not underestimate or softpedal the role
that Japanese corporate consortiums and Japanese import restrictions
played in helping the american electronics industry into the grave.....

>As to quality... competitive pressure sometimes forces a compromise
>between quality and price. Some of RS's products are as good as any
>you can buy. Some of Sony's products are not so good. There are good
>and bad products in any line. To paint all of RS products as lacking
>in quality is --in my experience-- simply incorrect.

Amen. I have been able to get some pretty doggone good
stuff at Rat Shack, in spite of their own dumb policies.... :-)

Consider also gear like the unfortunately discontinued HTX-100
10 meter rig. Essentially a Uniden HR2510 repackaged, and a darned
good little rig. I own the HR2510 myself, but have worked a LOT
of hams on 10M using that HTX100 - they work well for what they are,
and that is what counts.

2901. GB2RS News 14th May 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-12 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <800324552snx@llondel.demon.co.uk>
Source record: 246708
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 14th of May and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

This Tuesday, the 16th of May, is St Brendan's Day. St Brendan - also known as Brendan the Navigator - was a 5th century Irish monk and explorer who travelled widely in the north Atlantic region. Named after St Brendan, the Brendan Trophies are a pair of beautiful Waterford Crystal cut-glass vases which will be awarded by the Irish Radio Transmitters Society to the first stations to establish two-way communication across the Atlantic. What makes this difficult is that the contact must be on the 2 metre band and moonbounce or the use of satellites does not count! The full rules for this intriguing '2 metre Trans-Atlantic Challenge', as well as an in-depth article discussing the possible methods of propagation, will be published in the June edition of Radio Communication, which is due to be posted to all RSGB members on the 22nd of May.

RSGB Headquarters at Potters Bar is open Monday to Friday. However, there's an opportunity to visit HQ next weekend. On Saturday the 20th, from 10 am to 4 pm, the shack, museum, library and bookshop will be open to visitors. Note that this is not a formal Open Day so there will be no guided tours.

Despite letters from RSGB Headquarters and a reminder on GB2RS, a small number of Repeater Keepers have failed to comply with their obligation to inform the RSGB that they wished their Notices of Variation to remain in force. The keepers of GB3s OH, PA, PG, TS and YS did not respond, and therefore the RSGB has informed the keepers of these stations that these repeaters are unlicensed and should therefore now close down. The RA has also been informed. If any of these keepers wish their repeaters to remain operational, they must contact the Chairman of the Repeater Management Group, Geoff Dover, G4AFJ, urgently so the situation can be clarified. Please note that G4AFJ has a new dedicated phone and fax line, which is 01 455 828 273.

The Argyll 2 metre repeater, GB3LG, became operational on channel R3 from its new site on the 22nd of April. The repeater is located at Creag Buireinich.

And the 2 metre repeater near Middlesborough, GB3HG, which operated on channel R1, is temporarily off the air pending investigation by the repeater group's engineers.

The Radio Society of Bermuda will be operating VP9RND over the weekend of the 20th and 21st of May. This is to celebrate the 200th anniversary of the Royal Naval Dockyard in Sandy's Parish, Bermuda. The station will be active on all HF bands on both CW and SSB. They also plan to set up satellite and packet radio stations. An A4-size certificate will be offered to those who make contact with the station. QSLing will be handled by Bob Nadolny, WB2YQH.

Now some items of HF DX news from the weekly RSGB DX News Sheet.

From Moldova, five stations are using the special prefix ER50 from now until next Sunday the 21st of May, in commemoration of the end of the war.

From Italy, the special station II4ARI will be active from Friday the 19th until Monday the 22nd of May, as part of the on-going '100 years of radio' celebrations. The QSL information for this station is via IK4QIB.

And from Wake Island in the Pacific, AL7EL will sign KH9/AL7EL from Wednesday the 17th until Wednesday the 24th of May. Activity will be on all bands from 6 to 80 metres, on SSB and CW.

Next the Rally News:

The Dunstable Downs Radio Club is holding the national amateur radio car boot sale today, Sunday the 14th of May, at Stockwood Country Park, Luton, near junction 10 of the M1. The event starts at 10.00 am and there is talk-in on 2 metres. Plots can be purchased at the event. There is also a craft museum, a collection of horse-drawn vehicles and much more.

The Drayton Manor Radio and Computer Rally is also taking place today, Sunday the 14th, at Drayton Manor near Tamworth in Staffordshire. The usual traders are there, there is a bring and buy stand and the doors open at 10.00 am.

The Martlesham Radio Society VHF Roundtable is taking place today, Sunday the 14th of May, at the BT Laboratories, Martlesham Heath, Ipswich. However, please note that due to BT Labs' security requirements, admission to this event is by advance booking only, so please do not go along unless you already have a ticket.

Next Sunday, the 21st of May, the Yeovil QRP and Construction Convention will take place at Preston School Centre, off Preston Road, Yeovil. Further details may be obtained from G3CQR on 01935 813054.

Also on Sunday the 21st of May, the Mid Ulster Amateur Radio Club annual rally will take place at Silverwood Hotel, Lurgan in County Armagh. All the usual traders will be in attendance and there will be a bring and buy stall. Talk-in will be on 2 metres, channel S22. For further information contact GI7BQH on 01693 61298.

Now information about a change of venue for Plymouth Radio Club's annual radio and electronics fair, which will be held on Sunday the 28th of May. It will take place at Coombe Dean School in Plymstock, and not at

the address shown in the May RadCom. For further information contact Frank Russell, G7LUL, on 01 752 563 222.

Now for the HF contest news:

The Russian CQ Mir contest is taking place this weekend, the 13th and 14th of May. This is a mixed mode - CW and SSB - event.

The European Sprint CW Contest will take place on Saturday the 20th of May between 1500 and 1859 UTC in the 80, 40 and 20 metre bands only. The rules are given on page 22 of the April RadCom.

Next some VHF contest news:

The May 144 MHz contest will take place next weekend, the 20th and 21st of May. Note that single operators from a fixed station may choose to enter either a six-hour or the full 24-hour contest from 1400 to 1400 UTC. The rules are given in the March RadCom.

And the first 144 MHz Backpackers contest takes place next Sunday, the 21st. The full rules were published on page 83 of the April RadCom.

The French National Direction-Finding Championships took place in Nancy on the 30th of April and 1st of May. The UK was represented by Robert Vickers, G3ORI, and Phillip Smith, GW1XPG, who put in an excellent performance in only their third international event. Phillip came second out of 15 competitors in the 2 metre section on the Sunday.

And now the solar factual data:

The period from the 1st to the 7th of May saw solar activity at very low levels, and geomagnetic activity up to 'sub-storm' levels. Sunspot numbers were at zero, but from the 4th numbers increased to 22. The mean number was 11. Solar flux levels increased from 69 units on the 1st to 78 units by the 7th, with a average of 72 units. Electron fluence increased from moderate levels to end the period at very high levels. The X- Ray flux remained at A1.0 units until the 5th and then increased to A5.6 units by the 7th. The average for the period was A2.8 units. The 90-day solar flux average on the 7th was 82 units, down one unit from last week. On the 1st the geomagnetic Ap index was only 4 units, the only quiet day of the period. During early morning on the 2nd, due to a recurring coronal hole, geomagnetic activity increased and remained at 'active to sub-storm' levels for the rest of the period. The most disturbed day was the 3rd, with an Ap index of 43 units. The average for the period was Ap 28 units. The state has been 'mag alert' throughout the period. Between the 25th of April to the 1st of May, the aa indices declined from active conditions - 42.1 nanoTeslas was recorded on the 27th - to only 6.0 nanoTeslas on the 1st. The average for the period was 21.7 nanoTeslas, about K3. Our thanks to the British Geological Survey for this information.

I'll repeat the figures: spots - 11, flux - 72, Ap index - 28, X-Ray flux - A2.8.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 28th of April to the 4th of May, averaged 6.5MHz. Levels were down to 5.6MHz on the 1st, and the 2nd was the best day when 7.1MHz was recorded. The darkness hour lows averaged 2.5MHz. Levels were up to 2.9MHz on the 3rd, but declined to only 2.1MHz on the 4th. The daytime highs took place between 18.00 and 20.00 hours, with the darkness hour lows between 03.00 and 04.00 hours.

I'll repeat the figures: highs - 6.5MHz, lows - 2.5MHz.

And lastly the solar forecast.

This week the more active side of the sun is expected to be rotating away and solar activity is expected to be 'very low' to 'low'. Sunspot numbers are expected to decline, along with the solar flux, in the second half of the week. Geomagnetic activity is expected to start the week at quiet levels but increase to active conditions towards next weekend. Ionospheric MUFs during daylight hours are expected to be about 20MHz for the south and 17MHz for the north. The darkness hour lows are expected to be about 12MHz. Sporadic E can also be expected.

And that's the end of the solar information.

And finally in the main part of the news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Alfa and G7 Uniform Quebec series, and Novice calls in the 2 0 Alfa Lima and 2 1 Delta Yankee series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

Well, I think this depends a lot on which salesgeek happens
to land on you.

In our local Rat Shack, we have several guys that run the gamut
from an apparent former used-car salesman to one guy who really DOES
know his shit.

The used car salesman guy tends to be really obvious to anyone
with any brains of their own, and he lies through his teeth - typical
attempts to switch the customer up to the most expensive item in order
to line his own commission-pockets. He is beginning to figure out that
every time he tries this on *me*, I throw it right back in his face.
I think I probably know the product line better than HE does. :-)

On the other hand, the guy who seems to be electronically sharp
also never seems to try and rip anyone (from what I've seen of him) off,
and generally seems to give out good advice. He also is smart enough
to know that by going just a hair out of his way to remember
a few frequent customers names, he goes a LOOOOONG way toward generating
additional future profits.

If Radio Shack was smart, they'd gut the sales force of
all of these "used-car" types and if they couldn't hire enough
electronically gifted types to replace them, at least hire some
people who have a shred of honesty.

>
>I suspect that either I lost some calls when I pulled them from the
>data base (I did a little re-formatting) or I don't fully understand
>the legal call set.
>
>Anyone out there that knows the full specification for 4 character
>7-land calls?
>

The "A" followed by a number is delegated by ITU to DX countries:

A2 = Botswana (e.g. A22MN)
A3 = Tonga (e.g. A35RK)
A4 = Oman (e.g. A41LD)
A5 = Bhutan (e.g. A51JS)
A6 = United Arab Emirates (e.g. A61AN)
A7 = Qatar (e.g. A71CW)
A9 = Bahrain (e.g. A92BE)

Hence, "A" followed by a number designation cannot be available in the
USA. However, "A" followed by another certain letter and a number IS
allocated to the U.S. The allocations are as follows:
AA-AL USA
AM-AO Spain
AP-AS Pakistan

AT-AW India
AX Australia
AY-AZ Argentina

All K, N and W prefixes are allocated to USA.

Some special prefixes are allocated to US possessions and states not part of the mainland by geography, such as AL7, NL7, KL7 etc. to Alaska and AH, WH etc. to Pacific islands.

Hope this helps clear it up!

Zack W9SZ

Source record: 246714

A list of European repeater stations (in 6 parts) can be found at
iraun1.ira.uka.de in /pub/ham-radio/relais. It was compiled by people
from the DARC and contains nearly all 2m repeaters in Europe and all
repeaters in DL, HB, LX, OE, and ex-Y2 known in October 1990.
Most probably, the server will only allow you to download files
outside the business hours.
Hope this helps.

SB PROP ARL ARLP021
ARLP021 Propagation de KT7H

Solar flux was up slightly last week over the previous week. Stable conditions have been reflected by a declining A index. Activity should be heading down for the near term, with flux bottoming in the low 70s between May 17 and 20. After that the flux should peak in the 90s following June 1.

Sunspot Numbers for May 4 through 10 were 12, 14, 22, 12, 13, 13 and 26, with a mean of 16. 10.7 cm flux was 70.6, 72.9, 76.4, 77.6, 78, 77.8 and 77.8, with a mean of 73.

This week's path projection is to Zaire from Atlanta, Georgia.

80 meters should be open from 0030 to 0430z, and 40 meters from 0000 to 0500. Check 30 meters from 2300 to 0300 and again around 0500 to 0630. 20 meters should be good from 2000 to 0100, and on most days 17 meters should be usable from 1630 to 0000.

Eric Weber, KC7KBW

I'm sure Karl will write back, and I'd take his words as gospel; but, as I understand the rules - yes. The consumer is not allowed to program their radios. What if they get it on the wrong frequency (say they put in 145.33 instead of 155.33)? Opps. At least it's on a normal output! Maybe they mess up and get on an input, Hummm. Let's see: no radio theory, no knowlege of radio systems, no understanding of spectrum allocations, no "brains" are required for the non-licensed consumer. I think the FCC is correct in not letting anyone program a radio. I'd like to keep them of our frequencies. I'll stay off theirs in return.

I believe that any two-way radio service shop has someone with the commercial license. But if you want, you can go to Radio Shack (or where-ever) and pick up a study guide and go for it. The General Radiotelephone Operators License is not too much more difficult than the Advanced Amatuer ticket and you don't need to know CW! (You still have to have the radio in "type-accepted" condition, unless your transmitting into a dummy load or test equipment; and, this license is not a "station license." You don't get to transmit where-ever you want!)

Respectfully,
Walt / KF0OS

> weber@eskimo.com

Well, it's the FCC that is saying it, in 90.203 e, f, & g to be specific. It is legal for a SERVICE/MAINTENANCE person to put in the jumper, but inserting the jumper MUST disable the transmitter. Further, radio manufacturers are specifically required to have programming "devices and procedures made available only to service/maintenance personnel."

Using your exact words, "it is illegal for a consumer to program their own radio" under Part 80 or 90 Rules. And it is also illegal for an amateur to modify/program his extended-range amateur radio to operate on Part 80 or 90 frequencies since the radio does not have an FCC type-acceptance in that range.

Again, per 90.203, only "the manufacturer, service, or maintenance personnel" are permitted to program frequencies into the radio, NOT THE USER. Also note that under 90.215 the person servicing the radio and/or changing frequencies is required to log all maintenance activities and enter them into the official station records.

> of "what if's".

No, Gary Coffman did, but it's not as unusual as he would have you believe, because, like drug busts, equipment confiscations and seizures are NOT heavily publicized.

And no, you can't drop the boaters from the discussion because Part 80 is another parallel segment of FCC Rules governing the use of radios, not just USCG safety requirements. The Coast Guard has been given the authority by the FCC itself to enforce FCC Rules as part of their own safety inspection program.

The references to Part 2 and Part 15 are taken directly from 90.203, so if
you disagree you can take it up with the FCC itself. They refer
specifically to 2.803. Part 15 also includes receivers and transceivers
that receive additional bands where they are not type-accepted for
transmit.

1) Was the HT legal for import into the country where you used it? Most
countries do NOT allow unrestricted importation of personal electronic
equipment.

2) Remember that your amateur license only covers the amateur bands and it
is only valid in the USA. When you obtain a reciprocal operating permit
you are governed by the laws of the country issuing the permit.

>

> you are using a dummy load.

Partially accurate about the dummy load, but when you disconnected the
dummy load the radio once again became illegal and subject to immediate
confiscation. Also note that even test equipment has to comply with Part
15 and your amateur license doesn't convey any authority to operate an
RF-generating device outside the ham bands at any power level.
>
> I acknowledge that if you are going to push the rules to the edge you need to
> be careful. My point is... MERE POSSESSION of modified equipment by a licensed

> around to violate something.

No, and I didn't say that. what I SPECIFICALLY said was that possession of
a non-TA'd transmitter which has been modified to operate on frequencies
where type acceptance is required is illegal. Restating again just to
clarify for you, the extended receiver coverage found on many amateur
VHF/UHF radios is not inherently illegal; if it was those rigs could not be
manufactured, imported, or offered for sale. Enabling the TRANSMIT
function on Part 90 or Part 80 channels is absolutely a violation, not of
the amateur rules but of the rules governing those frequencies. It's right
there in 90.203, in black and white, and also in the parallel section of
Part 80.
>
> Getting back to the original question in this thread, you are absolutely

> if he buys the manuals and figures out how to do it.
>
Actually another e-mail responder reminded me that Type Acceptance CAN be
granted for front panel programmable transceivers designed specifically for
aircraft use, so I wasn't quite 100% correct.

Curtis, you need to READ 90.203 e and g one more time carefully. Those
sections require all manufacturers and importers to restrict the
availability of the programming "goodies" to service and maintenance
personnel and specifically require further that they NOT be distributed to

the end user of the equipment. In this world of multi-functional manpower, you may or may not be a qualified service person while the radio is on the bench, but you are ALWAYS the user when you are using the radio to communicate; you can't have any (front panel or laptop PC) programming features available or enabled while you are using the radio.

>>>Most every RS product is made if Korea and the
>>>quality is still lacking. What RS needs to do is have a U.S.
>>>companyies) manufacture their products so that we can have something
>>>of quality.

We're in a global economy, Duffy. If you want to compete, you buy where you can get the best products at a competitive price. Electronics is no longer an American industry. What happened to Swan, Hallicrafters, National, Johnson? Few US companies manufacturing in any field do not use foreign parts or have their products built elsewhere.

As to quality... competitive pressure sometimes forces a compromise between quality and price. Some of RS's products are as good as any you can buy. Some of Sony's products are not so good. There are good and bad products in any line. To paint all of RS products as lacking in quality is --in my experience-- simply incorrect.

>>>The reason they build the stuff there is that the Koreans can make
>>>it so cheap.

Price is a factor, but not the only one by a long shot.

>Design is not the problem with the R.S. stuff in some cases, the
>problem is the quality of components and manufacture. By the way R.S.
>designs very little anymore. Most of the stuff is designed by the
>R.S. contractors.

To RS specifications. Merchandisers spec the product out (this is done in Ft. Worth) and have really good circuit desigers do that work.
>>
>>> but excessive profit is ripping off the consumer.

Let's take an example... the HTX-202, which became the best selling 2m HT in a matter of months after introduction. When it was introduced, the next lowest-price 2m HT was $100 more. I'm willing to be ripped off that way any time.

BTW... this was such "junk" that it DID become a favorite of hams everywhere.

>>>If everybody could get the chance to go through a Rat Shack price
>>>book to look at their cost and retail I think you would be shocked
>>>at the mark-ups.

Undoubtedly... unless you knew your butt from third base about retailing, then you would know that RS gross margins are right in line

with almost any retailer of any product type. In fact, YOU might be shocked to look today... the margins are much lower than they were in the '70's when you worked there. Come to think of it, you don't need a price book... most Tandy annual reports publish general gp information for public consumption.

Sorry about those "sickening" years. I worked there for 17 years. (I am admittedly happy to be "semi-retired" now.) It was intense. The hours were long, but I thoroughly enjoyed the people and the company. RS provided me the education, knowledge and background to make more money working one-third the hours. It was time very well spent.

Like any other job, you get out of it exactly what you put in. In your era, top sales people made good incomes. The cream of the crop... six figures.

I'm not disputing your opinions, Duffy, just offering an opposing view.

Cheers...

Ed, W5TOO

>Duffy

At the risk of sounding unpatriotic... I would prefer to buy American, but if the American worker wants my dollars, let him earn them. If he is so disinterested in his job, so concerned with shorter hours and more benefits that he can't produce a competitive product, that's his problem... not mine. I work for my money and I will spend it on the best quality product at the best price. In many cases, unfortunately, that may not be "one of ours."

Component prices, you say, are cheap. I'll give you one to think about concerning buying American... At one point in my career with RS, we were shipping memory boards to the Far East to have them populated with American chips (Motorola I think) and shipped back to us. It was cheaper than the cost of the chips alone in the USA.

It's a strange world out there!

Does anyone have the EEPROM programming information on the GE Phoenix SX line of radios?? I have the service manual and the programmers instruction manual, but neither of these show how the EEPROM data is organized. I have been trying to figure it out for days now. If someone has the programmer, take a look at the BASIC program which controlls it. Thanks. Len Popyack WF2V

Okay, years ago you had to have an engineer's license to service the
commercial-band radios. That is, if you wanted the frequency changed, it
had to be done by someone who had a license and had been certified by the
FCC to know something. However, the FCC no longer offers such licenses.
So yes, any Joe Schmo can open up a two-way service shop and work on
radios. They don't have to know a damn thing about it. This is a terrible
problem and is the result of Reagan-era deregulation.

>I believe that any two-way radio service shop has someone with the

This used to be the case, but it's the case no longer. You still do need
a type-accepted radio, and you still need a station license, but if you want
to program your radio or swap out crystals, you can.

Now, a good question is what will violate the type acceptance of the
radio. For example, if I buy a business band radio and I modify it in
some way that it no longer meets the original type acceptance requirements,

is it still legal to use?
--scott

(After years of modifying taxicab and locomotive radios for operation on
the amateur band, I am moderatly amused that anyone would want to illegally
use amateur gear on the commercial bands....)

I can't give you the ENTIRE specification, but the USA only has the Aa prefixes from AA thru AL. The remainder AN to AZ and all of the An prefixes (where n is a number) are allocated to other countries. I think this much information at least justifies the search output and tells you what you wanted to know.

2918. Need help with Yaesu FT-2700

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-12 00:00:00 UTC
From: jbl@levin.mv.com
Message-ID: <LEVIN.95May12151451@morpheus.bbn.com>
Source record: 246725
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I have misplaced (buried till February 1997 or later) or lost the
owners manual to my old Yaesu FT-2700RH mobile dualbander.

It's one of those radios where the VFOs and memory set their transmit
offset according to a manual slide switch, except that memory channels
1-8 let you store any transmit frequency. I'm looking for a reminder,
if anyone who has or had one of these machines recalls, of how to set
these transmit frequencies (or how to reset them to use the switch).

Answers by e-mail please. Anyone else dying to know the answer can
send me mail and I'll let you know what I hear.

thanks / JBL KD1ON

In article <3oimum$and@portal.gmu.edu>, smasters@bzy.gmu.edu (Shawn C. Masters) writes...
>limiting yourself to discrete components is like supping up cars for a drag race
>only using large chuncks of spare metal. Face it, integrated, multifunction
>parts are gettig to the point where they are as cheap and available as
>single, special purpose discrete components. If someone can build a radio
>with op-amps, why is that not as good as BJTs or FETs?

Ok, build your radio out of microcontrollers and PLLs and DDS chips then. By the way, you don't get to program any ROMs with a machine you didn't build yourself. You also make the printed circuit board yourself. I'm sure you can see where this is going. Jeff did say FROM SCRATCH. It is possible to build a working radio from a piece of copperclad, some discrete components, a soldering iron and solder, and nothing else.

WHY do it? To learn about radios. You've eliminated the need to learn a PCB CAD tool, to know how to make a good PCB, to learn machine-language programming, to learn how to apply DDS, etc, etc... This can make the difference between a hopelessly formidable task and a possible one. It might make the difference between a technical ham and an appliance operator, no? Sophisticated stuff is fine, and advancing the art is fine, but you have to start somewhere. Not too many people go from zero to synthesized radio designer in one leap. They COULD go from zero to building their own radio by simply handing them the parts for a "dead-bug" style circuit and giving them a little coaching. Bottom line: simple has its place. Just because sophisticated exists doesn't negate that. This is true for CW vs digi-droid.

BTW, I don't think there would be enough difference between an all-op-amp radio and an all-discrete one to matter.

I am looking for a good quality wall chart (large - about 36"x24") that
covers frequencies from DC to visible range or higher, with the different
bands and their use/characteristics marked. The more information on it,
the better. I would appreciate any pointers on where I can get them.
Thanks in advance.

Believe it or not, this is NOT new. When I got my Novice ticket in 1966, the Ameco study guide had the questions and answers practically verbatim from the FCC amateur radio tests.

Not that I think this is good, just that it's not new. 8^{)

I posted a reply yesterday and I have yet to see it in the newsgroups.
So if this seems to be repititious, my apologies:

jeffrey@math.hawaii.edu wrote: : jcumming@dgim.doc.ca (Jim Cummings) writes:
: >
: >Quite right, I would agree that walking continues to be a form
: >transportation, regardless of the possible alternatives offered by
: >technology, i.e. trains, planes and automobiles. However, if one wishes
: >to drive (or pilot, as the case may be) these vehicles, a test is
: >administered to determine the proficiency of the candidate. However, as
: >far as I am aware, there is nothing in any of these tests that require
: >the individual to prove that they can indeed "walk".

: This is an excellent analogy, Jim. Just as we must learn to walk before
: we can explore more fascinating modes of transportation, we should learn
: the code so as to easily get on the air with equipment we've built
: ourselves and in doing so gain invaluable construction skills that will
: lead us into building other modes of communication.

1. In the province of Ontario, it is not necessary to prove that you can walk. There are a number of paraplegics, (those who cannot walk and are confined to a wheelchair) who are holders of drivers' permits. In addition, I recall that there is an individual here in Canada who, in additon to being a paraplegic, is also the holder of the private pilot's licence. Therefore, it is not necessary to be tested on the individual's capabilities to walk. In like manner, there is little justifiable evidence that mandatory testing of the Morse code is necessary in order to operate an amateur station in the amateur allocations below 30 MHz.

To reiterate, the need for ensuring that all amateurs must have a knowledge of Morse code is long past. To emphasize, one does not need to know the Morse code in order to build a continuous wave transmitter. If on the other hand that one does indeed build a continuous wave transmitter, and wishes to use ON-OFF keying to communicate with that transmitter, it goes without saying that the international encoding scheme is the Morse code, yet this still does not justify mandatory testing below 30 MHz.

2. Equipment building is not the be all and end all of amateur radio. The opportunity is there if one wishes to take advantage of building their equipment, but it is not a requirement to do so. If this were the case, this again would be an unjustifiable government intrusion. Furthermore, there have been enough significant advances in the art and science of radiocommunications such that digital technology advancements have increased the capabilities of radio amateurs, whereas the hardware advancements have been incremental by comparison. Besides, there are

very few of us, myself included, who have the skills and the knowledge to build a radio that has the capabilities that are currently available on the market. Amateur radio is generally evolving from a tinkering person's hobby to a thinking man's hobby.

: Oh, as long as CW is permitted from lower to upper band edge, on each
: band, the code should continue to be required to gain access to HF.
: For how else would you know what --.- .-. .-.. means?

This, as everyone knows, is the exception rather than the rule, particularly on the 20, 15 and 10 metre bands. In these instances, the digital segments are interspaced between the two other modes. Since the concern seems to be the non-Morse code operators stop interfering with a CW QSO, then in the interests of goodwill and fairness, and to mitigate any interference to digital operations from CW communications, it would only be prudent to amend the international regulations, as well as domestic, such that CW operators must be in possession of equipment that is capable of decoding all the digital so that they can be made aware of the fact that they are causing interference. Such inconsistencies must not be allowed to continue.

2924. Controlling multiple ICOM rigs from PC

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-13 00:00:00 UTC
From: ys@isr.harvard.edu
Message-ID: <3p2ga7$pkd@decaxp.harvard.edu>
Source record: 246568

How can I control multiple ICOM transceivers from a single serial port of my PC? I have this box called CT-17 CI-V Level Converter (CI-V = ICOM Communication Interface-V) from ICOM. I can connect up to four ICOM transceivers to CT-17 which is connected to one of RS-232 serial ports. Thus, hardware-wise, I need only one serial port and one CT-17 for controlling multiple rigs.

Unfortunately, I have not been able to find any PC software product which supports this type of configuration. Many logging programs support only one rig. CT does support two rigs, but they must be connected to two separate serial ports. It does not make much sense to buy another CT-17 box! If anybody knows any PC software product which supports the above configuration, please let me know. Thanks!

I see nothingwrong with that. Why can't they use 2 meters for something
useful? Our hobby will not be around if we don't do something about it.
I for one don't give a damn about electronics? A friend called me an
appliance operator. If my radio doesn't work, I see if it's plugged in,
if it still doesn't work I take it to the radio store! However, I love
the hobby. I love CW. But I can see why someone could love ham radio
and not care anything about CW.
It is a HOBBY. Its's supposed to be FUN. The average age of a ham is 58.
That alone should tell us we need to do something about it.

Duane,

In spite of this latest marketing promo from RS, I can tell you that they don't really want their people spending there time just answering questions. They naturally want them to sell as much stuff as possible. That's business.

On the other hand, they don't pay people enough to attract the brightest and most knowledgeable people. They way that RS has structured its inventory system, penalizes the manager when the salespeople sell products that are on sale. In order to balance out the margin loss they take on selling sale items, the RS salesperson has to push a bunch of stuff on the unsuspecting customer. These are items with very high markups. For instance, the Tandy Extended Warranty or TSP, batteries, cables, parts of any type. If the customers just buy sale items and nothing else, the manager looses his/her shirt.

This is why there is so much turnover in RS management. Tandy has structured it to be a loosing deal for them. However, as long as the customer knows how to protect themselves if they choose to buy RS stuff, they won't get stuck buying a bunch of accessories with sky high markups.

Regards,

Duffy

I wish I heard something like that on our local repeater, We have over
two hundred hams on our local repeater. Average age is 114. I monitor
it in when I am home and sometimes it will go 3 or 4 hours without anyone
using it! Lately I hear a couple of high school kids using it. I think
that is great. They seem to be very good about following procedure.
They may talk about something I'm not interested in but at least they are
using it! Ham radio is a hobby! It is supposed to be fun! We talked
about putting a phone patch on our local repeater. That was voted down
as everyone thought it would be used too much. Would that be worse than
not using it at all?

Just because the comments are negative does not mean I am bitter. In fact, as stated before, I made a fair amount of money working for them. Not as much as I could have made somewhere else, but it was fair.

My comments are related to how RS treats customers, reasonable pricing, anti-consumer extended warranties, and an overall decline is quality of their products the last 25 years.

If you don't want to accept the message fine, I understand. But let the buyer beware!

If you're getting RFI from your monitor, check the background pattern you're
using on the screen- the worst case rfi generating pattern is a grey background
made up from alternating black and white dots- all guns on and all guns
off, switching everything as fast as you possibly can. This is one of the
patterns
we use for rfi testing. Go for a solid color to minimise emissions from the
video portions of the display. The horizontal width link can also be a strong
magnetic radiator if it's unshielded- high currents are present.

Subject: Channel spacing in ham VHF/UHF phone?

In article <1995May8.191951.930@news.csuohio.edu> mike@shien.ist.csuohio.edu (Mike Mayer) writes:
>What are the common frequency spacing for the 6m, 2m, 220MHz,
>440MHz, and 23cm ham bands for voice (phone) communications?
>
>10 Khz seems common, but is that the case on all bands? I realize
>beacons are many times on 5 Khz spacing, maybe CW too.

2 meter channels for the 146 MHz and 147 MHz sections of the band in most of the US are on 15 kHz centers. In parts of the US, they are on 20 kHz centers. In the 145 MHz section of the band, they are on 20 kHz centers. That's for repeaters and recognized FM simplex channels. In practice, however, simplex operation occurs anywhere the operators like, and the granularity of the radio determines the minimum channel step. That's usually 5 kHz for most radios.

On 440 MHz, the channel spacing is 25 kHz, but FM simplex similarly may be on any 5 kHz step.

For SSB and CW operations, all bets are off. Those operations aren't channelized, and step size is purely a function of the radio, usually 100 Hz, but on some radios 10 Hz or even 1 Hz steps exist. Radios with older analog VFOs have essentially infinite granularity. In practice, of course, stations tend to space themselves out so that their spectrums don't overlap.

From: Wayne_Estes@csg.mot.com (Wayne_Estes)
Subject: Dipole antenna--shape and SWR

The characteristic impedance of an inverted Vee is about 50 Ohms, resulting
in an SWR of about 1:1 with 50 Ohm coax.

The characteristic impedance of a flat dipole is abobut 75 Ohms, resulting in
an SWR of about 1.5:1. This is still a pretty good match. I wouldn't worry
about anything less than 2:1.

Doug,

If you're in Macau, you might pay a visit to the CPT museum in the
centre of town at the Central Post Office. Visit it in the afternoon.
You might have to wait 10-15 minutes for someone to get the key and
open it for you. They have old telecom equipment including an exchange
from the 1930s. Lots of Marconi VHF equipment, a broadcast studio
and a collection of stamps (it is a PTT museum after all!!!).

Paul,

I passed the 20 wpm test last year using just the code tapes.
Get some good ones (I used the ARRL standard tapes) and then go for it,
morning and evening. I followed along in the book for a while, to
associate the printed characters with the sounds, and then started testing
myself without the aid of the book. Do it each time until you hit your
limit and go a little bit past it. It's one of the most
frustrating/mesmerizing/fascinating things I have ever done. I knew I was
bad off when I started being able to interpret messages from my windshield
wipers...

I wish you success.

Subject: Q: Marine Radio Freq's?

I am in the market for a marine VHF radio for my watercraft, but all
the catalog says is that they are VHF, and that they recieve 88 chanels and
transmit on 57 channels. What I would like to know is:

? What is the specific frequency range of typical marine radios?

? Do they transmit/recieve in AM or FM?

? What is the frequency spacing of the channels?

The specific brands I am looking at are Icom, Apelco, Humminbird, and
Shakespeare.

I would like to apologize in advance if this is not the correct forum
for these questions, but I am rather new to this.

Any info is apreciated.

From: cslye@web1.calweb.com (Cameron Slye)
Subject: What to buy

We are looking at getting 3 handheld units to be used around a school campus
for a few students, we can not use the distric radios for this, we have a small
budget, looking at around $200 per unit... I have been looking at the
following 2 radios that are at Radio Shack, the VHF-FM business transceiver,
and the UHF-FM personal transceiver. They both are 1 watt, I like the UHF
one a bit better because it is smaller... What is the FCC licenseing cost on
the business one ? Because these would also be used in a room that we use
wireless mics in, I kind of like the UFH one better, because our mics are
VHF, don't need any more crap on those... I guess my main question is, the
school is about half brick, it is only a high school campus, not huge, what
would be the top performer ?

>Gamma, and such) arrives at Earth 8 minutes later, after the
>eruption. This affects the "F" layer(s) above the Earth, which
>affect radio propagation.

Sunspots appear black because they are *cooler* regions on the
Sun's surface. They are not points of "eruption". Indeed they
are depressed areas of activity on the Sun. Eruptions which generate
high energy events are called "flares". These are more common during
times of unsettled solar conditions, but the biggest ones often
occur around the solar sunspot minimum. Sunspots are associated
with less violent solar emissions. They are more an *indicator*
of solar conditions than an *initiator* of solar events. (Theory
is unsettled here, but it's generally acknowledged that while
sunspots are associated with active events, they are not themselves
the origin of those events.)

[other, generally sound, information deleted]

I would note that because the biggest flares often occur at times
of sunspot minimum, the more unusual propagation events generally
occur at this time, and it can be exciting to catch such events.
One shouldn't just write off the higher frequencies during a sunspot
minimum.

>some of those silent hams.

This is an example of Gresham's Law in action. You're allowing the
chance of conversations you might find uninteresting drive you off
from operating at all. If you persist in that course, you aren't
likely to find conversations that will interest you. If you want
conversation on topics of interest to you, *you* must initiate
such conversations. Will you occasionally connect up with a bore?
Of course, that's the risk of striking up a conversation with any
random person. But, you also miss the chance to meet interesting
people by refusing to initiate contact. The person you think is
a bore may have very interesting things to say on another topic.

The art of conversation is a two way street, you rarely get more out
of it than you are willing to put into it. I've generally found that
I can draw anyone onto an interesting topic, if I work at it. Everyone
has interests, and something interesting to say. You've just got to
find the right way to draw them out. If neither party makes the effort,
then you shouldn't be surprised if the conversation is banal.

>problem and is the result of Reagan-era deregulation.

It's also not true. While unlicensed technicians can work on commercial
equipment, they must still do so under the supervision of a licensed
technician holding a GROL. The same is true in the broadcast business.
Not everyone needs a First Phone to do repairs and adjustments anymore,
but there still must be a licensed person in charge who will approve
and accept responsibility for the work.

First Phone and Second Phone are gone, but the GROL replaces both.
Only one per business is required, but it is required.

Gary

There used to be a section in the ARRL Handbook about it, but I haven't
seen it in recent editions. OOK isn't well suited to coherent detection,
and more modern modulations are much better suited to the technique, so
it appears this is an idea whose time has passed. Petit's newest scheme,
Clover, gets better press.

<grin>

Not totally accurate. The majority of packet bulletins have been arriving
into VK1 via the gateway for a couple of years now. VK1RGI's loss has meant
we have lost connectivity with NSW stations directly. We still get @VK2
bulletins from Melbourne and Wagga.

We are hoping to have the VK1RGI node back up on Mt Ginini before the winter
snows block us out.

>

>73,
>Alan WB2OPA

Gee, I wonder how LogMaster Plus/Plus manages to get advanced
information on changes to the CD formats from Buckmaster ?

Here we are in this thread based upon the fact that Buckmaster has
just changed their CD and left all the 3rd part logging programs hanging
in mid air not conforming to the new Buckmaster format.

None of the logbook software people at Dayton knew in advance of the
problem except for some user reports of problems just days before the
Dayton Hamvention. I know for one (WJ2O) who I told personally had
not heard about it yet.

Buckmaster of all the CD suppliers should have notified logbook
providers of the changes as they have signed confidentiality contracts
with these people before they supply them with the information how
to read the Buckmaster encrypted database.

I wonder what other CD users, software writers, etc had any prior
information on the Buckmaster change or its non-compatability with
any of the logbook or DX Cluster software.

So far it seems like LogMaster Plus/Plus is the only one who knew of
the changes but he wasn't on display at Dayton to show it (hasn't been
for about 3 years as I recall).

>ron thomas
>>
Your last guess is no doubt the right one - all of the above. I used an attic antenna for several years and I believe that one of the most sneaky problems is the presence of resonant or near-resonant pieces of wire or plumbing nearby. Aside from the SWR issue, they can really distort your radiation pattern without it being very obvious. If you find you work out well in some directions but not in others, suspect that.

Actually, an SWR of 1.5:1 is not too bad, as long as your transmitter will load to full power. If you reduced it to 1:1, you'd see very little difference. Have fun with it - I earned DXCC with mine!

Next time you're in Dayton, OH, Listen to 145.110 and 145.190.
None of those examples were embelished to make them sound worse.
Those were all actual conversations. If I hadn't heard it, I wouldn't
have believed amateur radio could get this "dumb."

Next time, try this one: The Rio Hondo machine in Pico Rivera
146.175 MHz + 600 KHz. No PL required. However, a PL of 141.3 will
turn on the extra preamp.

If the tube is color, and uses a shadow mask, IE isn't a Sony Trinitron,
then its face is already effectively shielded. If the tube is monochrome,
or a Trinitron, then fine wire mesh, painted flat black and and installed
against the tube, will form an effective face shield, and serve as a glare
filter in the bargain.

Where you have to concentrate your shielding is around the plastic case.
You can either use metal, or a conductive spray. GC markets a spray that
is effective.

There is nothing wrong with working a station this way, but note that DXCC rules, for one, forbid using such QSOs for DXCC credit.

Rule 6: "All contacts must be made with amateur stations working in the authorized amateur bands or with other stations licensed or authorized to work amateurs. Contacts made through "repeater" devices or any other power relay method (aside from Satellite DXCC) are invalid for DXCC credit."

From: Michael.Black@juxta.mba.org (Michael Black)
Subject: Wanted 10 watt army surplus bc band transmitter

rilowite@aol.com (RIlowite) is looking for:
"army surplus broadcast band transmitter which ran
about 10 watts AM and was used on army bases for entertainment and
emergency broadcasts to the troops. I need such a unit for the purpose of
helping the hearing impaired members of our church."

I don't think this is going to work, since where's the license going to come from to operate such a transmitter even if you do find it?

INstead of trying to track down a surplus transmitter that might not have been made in large quantity, that you don't have the model number for and which probably couldn't be licensed and can't be operated without a license, better to look at the alternatives.

You could try a "wireless microphone" for the am BC band that is legal there, since it can only have an input of 100 mW or less. The range might not be so good, though. It would depend on the size of the church.

If you're going to wireless microphones, you'd do better to go with an FM wireless microphone, since FM tends to sound better.

A better path to look into would be an inductive loop. Most hearing aids have a switch that selects a mode for use with a telephone. It connects a pickup loop (like you used to be able to buy to record phone calls without making a connection to the phone) in place of the microphone. The signal from the phone goes from the inductor in the receiver of the phone to the inductor in the hearing aid, rather than converting electrical to acoustic in the receiver, and then back to electrical in the microphone o
f the hearing aid.

With these telephone pickups in the hearing aids, more uses were created for them. The basic idea is to put a loop of wire (I think it's usually a few turns) around the room where you want to distribute the sound, and then feed it with an audio amplifier. The hearing aids in the telephone mode picks up the audio flowing through the loop.

This is good for the people with hearing aids, since hearing loss is not just a matter of things being not as loud, but a loss in dynamic range and in frequency response. Keeping the hearing aid in "the loop" means that the agc and filtering in a given person's aid is not eliminated, which might happen if you switched to radios and headphones. ALso, since the part of the aid that goes into the ear is fitted to the persons ear, they are a lot more comfortable than a pair of headphones.

FOr those with hearing loss and no hearing aids, you could always whip up some battery operated amplifiers fed from a pickup loop, to get the same effect. You could probably scrounge up some old "walkman"-type gizmos that people are throwing out due to mechanical failure, and use the amplifier in them.

I don't have any specific details about the inductive loop, but I have seen articles on the subject over the years. Look in a library with a good selection of back issues of electronic magazines.

>> They add a service charge to your 911 call.

NOT! You don't even have to have service on a cellular phone to be able
to reach 911. If you don't have service, then you can not be charged.

If the cellular phone company did not offer 911 or some other emergency
service, I think they would be liable if an emergency did exsist.

Here's another point I havn't seen yet posted. . .

If you have a cellular phone, you are at the mercy of the company supplying the service and the hopes that the tower is still operational. Cellular phones can be stopped by those that run it. If we were to ever lose our freedom in America, that might be one of the things to go.

On the other hand, amateur radio is not at the mercy of no one. If you are involved with any amateur radio clubs, you will notice that they usually are involved with some sort of emergency service operation. Why? Because they are the ones that can deal with any emergency communications and don't have to worry about towers or being switched off because they didn't pay their bill.

I think the big question here is money! If both cell and amateur radio were free, then cellular would be nice for everyone but even then, I wouldn't toss my 2m in the closet.

There is a LOT of interest in the UK in Heathkit at the moment.
Something to do with expensive JA boxes and a recession!

The UK magazine Ham Radio Today is featuring a series of articles
about old radios and the HW-101 recently appeared.

The usual warning about Heathkit is that the build quality is VERY
dependent on the skills of the builder. Few were factory built, most were
owner built. Have a good look around the insides of the radio and see how
many dry joints you can spot.
(Heath UK are reputed to have have a piece of equipment returned with a
"will not work, please fix" comment from the owner/builder. The guy used
either adhesive tape or glue to hold the components together!)

I've only had a few Heathkit items, the nearest I came to a tcvr was an HW-7,
so I can't be sure but I believe that their design was such that you could fix
them quite easily and ESPECIALLY if you have the manual! Plenty of space
inside and none of this surface-mounted component stuff to ruin your eyesight
and finger-tips.

p.s. Heathkit closed down in the UK partly because they were EXPENSIVE,
(xtal 2m set cost more than a systhesised box from Yaesu), and partly
because their after-sales service from their London based shop was
not good. I think the shop's staff wanted to sell their computers
and neither cared, nor knew, about anything else.

This week we will be having as our special guest :

W B 6 N O A G o r d o n W e s t

from the Left Coast. Gordon is always such a tremendous guest. So if you have ever wanted to talk directly with "Gordo" tune us in.

I would like to take this opportunity to welcome all folk to the:

B E S T O F 7 5 N E T

on

3 . 9 7 5 m H z

E V E R Y

S A T U R D A Y N I G H T @ 8 : 3 0 E a s t e r n

The purpose of the net is to inform and entertain. Each week we have a special guest on the net to speak directly to the amateurs on the frequency. This is a wonderful opportunity to speak personally with these great and knowlegeable individuals in their various fields.

Every so often the Best of 75 Net, has "OPEN LINE". This is again an opportunity for you the amateur radio operator or Short Wave Listener to ask questions or express your view on the net.

Prior guests have included ; K7UGA Senator Barry Goldwater, WB6NOA Gordon West, KC9RP Hap Holly, W2NSD Wayne Green, WA6ITF Bill Pasternak, K9EID Bob Heil, W5YI Fred Maia, WB2MGP Carole Perry, KB6LQS Dick Rutan and WD9HSE Bob Nelson

So please be there! The Net will not be very fun without you!!

>using it! ... Would that be worse than not using it at all?

Yes, it would. Proper amateur practice dictates that one should use
simplex when at all possible, and leave repeaters for what they were
intended -- low power or mobile stations incapable of working
simplex.

Hearing two people sitting in their shacks across town yack on the
local repeater is annoying.

When I hear two people using my repeater that I know can work
one another simplex, I tell them to move off. Sometimes they have
a good reason for being on the repeater -- a third party that
can't work simplex is coming on, or they are waiting for
someone, etc. Some leeway is good, as long as it isn't abused.

This is a matter subject to a great deal of influence from personal
experience with specific situations and individual stores.

I worked for the first Radio Shack store in Kansas City back in 1967-68, and
for several other similar businesses (anybody remember Burstein-Applebee?)
before and since.

IMnvHO, some things have deteriorated, others have gotten better. RS has its
ups and downs. I shop there, but I shop around.

Bingo! As a former RS counter person (nearly 30 years ago) who also worked several other such places, I will state that the economic factor is the key. If you have enough background and skill to provide the kind of information and advice that folks wander in and demand (gratis, of course) you can get a better price for it with a different employer.

The economic realities of retail sales simply don't allow the situation to be any different.

>

The GROL only gives authority to work in the aviation, marine and international
fixed public radio service. The GROL is not required to work on equipment
under part 90. Rules over the last few years have been laxed up quite a bit.
Just a couple of years ago the requirement to keep radio service records was
relaxed to require that the station license was all you essentially had to
keep. However, station licensees are held accounatble for equipment
compliance.

I would also agree with Scott, the lack of licensing, or even certification
requirements has been to the detriment of commercial radio.

>to program their own radio? If so, who is permitted to program a radio?
>

Eric: Karl is pretty much correct. When a radio is being used in commercial
service under 90, the user cannot have the capability to select anything other
than the preprogrammed frequencies. Technically, the user can program the
radio but there are conditions for it.

The means for programming have to be via externally connected equipment that
would only be availbale to service persons, or by enabling a service mode
internally (like a jumper) that would not be normally available to the end
user. When the radio is in the programming mode it is not supposed to be able
to transmit.

The user could easily become the service person with the right knowledge and/or
equipment. However the radio cannot be left "programmable" while it is "in
service" and being used to communicate.

Where I still beleive Karl is misinformed is when he says that it is against
FCC rules to modify a ham rig to operate out of the ham bands. He will not
find anything in the FCC rules (47 CFR) that prohibit it. But he is refering

to some case law that has been upheld in certain cases.

The one recent case I can think that was publicized was the ham in southern California that called for help from the Sheriff's office on thier frequency when he could not reach anyone else. After someone's life was saved and the incident was over, the Sheriff's department demanded the ham surrender his "illegal" radio or face arrest. The FCC acknowledged the ham broke no rules and what he did was allowed under part 97 (which did apply even though he on a part 90 freq) and the Communications Act. But they did not come to the defense of the ham and used the "intent" case law to go along with sheriff. It was a polictial move by a sheriff's office that behaved as though they OWNED the frequency they were using under a license. But again, there was no violation of 47 CFR (parts 90 or 97) or the Communications Act.

Hello, this is Harry, WB9ZAI. I have a 1993 Chevy Blazer S-10 and have experienced problems installing hf radios in it. Does anyone have any experience or recommendations on the proper installation (cable routing, electric connection,etc.) for HF gear. I currently am using a Kenwood TS-50 and a SCG Super Tuner with a 20M HamStick antenna. Problems bands are anything above 20M.

Any observations or thoughts would be appreciated.

73, Harry.

A license has value for what it enables you to *do* with it, not for what hoops you had to jump through to get it. You only take a test once, you use the license every day for the rest of your life.

Nikola Tesla did extensive research into this in the late 1800's (See Colorado Springs Notes) and early 1900's.

He received several patents on such systems.

James Harris Rogers also received numerous patents for such systems around 1910-1919. I have copies of most of these patents and literature.

The US military used Rogers' system extensively in WWI. After that it sort of disappeared off the face of the earth (no pun intended!)

It is an intriguing system and I will experiment with it one of these days!

Ah, but you see, *I* would find those topics utterly boring. I've already survived high school (long ago, and just barely), I don't rollerblade or fly a kite, my college-choosing days are over, and I'm not in the market for any gear. So, if I may take your attitude, how dare anyone talk about such boring stuff when I'm listening?

2961. This Week in Amateur Radio #111

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-13 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <BA4fDUk.sanderman@delphi.com>
Source record: 246655

Here is a summary of news items covered on edition #111 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 19-May:

1. FCC Issues NPRM Affecting Part 97 Rules
2. ARRL Asks Commission to Dismiss W5YI "Anti-bulletin" Proposal
3. Part 15 Users Side with ARRL on Allocations at 902 MHz
4. Hams in Oklahoma City End Emergency Communications Operation
5. "EZSATS" with Bruce Paige, KK5DO
6. Memorial Service Set for New England Microwave Pioneer
7. "The RAIN Dial-up" from Chicago
8. Upcoming Special Event Stations with George Bowen, N2LQS
9. "This Week" Announces Return to Satellite Next Week
10. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
11. Weekly Propagation Forecast
12. "Amateur Radio Newsline" - Edition #926 from Los Angeles
13. Additional Special Events over Memorial Day Weekend

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a New York State not-for-profit corporation based in Albany, New York.

The program is carried each Saturday at 7:30 PM (EDT). Due to the loss of our satellite transponder, the program will be carried live only in the Albany, New York area (145.33 MHz) and on 160 meters via WA0RCR at 1860 kHz. Affiliates may obtain the program by landline on a scheduled basis by contacting the producers. "This Week in Amateur Radio" will return to its home on Telstar 302, transponder 21, 5.8 MHz wideband analog audio, next Saturday, May 20th.

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @ WA2UMX.FN32AW.ENY.NY.USA.NA and on various landline bulletin board services.

Subject: Astounding New Antenna or 'Getting Down to Earth About Aerials'

Throw away the tower and beam, ground waves are the answer.

There is always a lot of discussion amoung amateurs about towers
and beams. What's the best beam, best tower, how high, ect.
Well, below is the answer to all those problems associated with such.
No more worry about wind loading, guy wires, rotators, lightning
strikes, neighbor complaints, tower restrictions, or any other of
the problems that plague the radio operator with all that steel and
aluminum in the sky. Install this new revolutionary antenna and
work the world. Move over AEA/IsoLoop.

THE SUBANTENNA

Easily Installed in a Few Minutes-
Guaranteed to Bring in Loud, Clear DX Right Through Summer Static

Here it is-the new, improved and perfected SUBANTENNA-even better
than its amazingly efficient predecessor which brought forth volumes
of enthusiastic praise from thousands of critical fans. Now it's
ready-the new SUBANTENNA-ready to prove its DX ability-ready to
challenge any type of loop or up-in-the-air aerial.

HOW THIS AMAZING NEW UNDERGROUND ANTENNA WORKS

It is a known fact that radio waves travel through the ground just as
they do thru the air. Ground waves, however are much clearer
than air waves, because air waves are more or less cut-up with static
and other disturbances, while the ground is practically free of all
such interference. The new improved Subantenna-a real, scientific
device completely enclosed in a small, compact sealed and moisture-
proof can, is buried in the ground in a vertical position. It inter-
cepts the clear, strong, static-free ground waves and sends them up
to the receiver via a shielded cable. Comparison, station for station,
of reception taken from the ground with a Subantenna and reception
obtained in any other way, instantly establishes the worth of this
great new device.

USERS AGREE IT IS THE GREATEST NEW THING IN RADIO

"I have a switched on my cabinet by which I can throw from an aerial
to the Subantenna. For example I tune in WEAF on the Subantenna and
find I have to turn down my volume control to almost a full quarter
away from 'OFF'. Then, reversing to the aerial I can hear barely a
sound, and this is only the same night I installed the Subantenna. If
it improves with settling, it should be more than remarkable."

N. Seymour, Newark, N.J.

"I am writing to tell you that last night I gave my Sub a good test
and must say it has anything beat that I have ever seen under any
conditions. The stations always come in at the exact same spot, and
the quality and tone are far better than obtained with the noisy
overhead aerial. You had better send me some order blanks."
A. Turner, Baltimore Md.

SEND NOW FOR GUARANTEE OFFER
Cloverleaf Mfg. Co., Chicago, Illinois

From RADIO NEWS, September 1928

Well, I'm convinced. I am going to bury the dipole this week-end and
start working DX via ground waves. After all, it is a straighter shot
to BY land straight down than over the north pole. I can here the
discussions on the bands now; "There was great propagation thru the
San Andres fault last night". "Oh yea, well I worked New Guinea via the
Marianas Trench until a magma flow out by the Hawaiian Islands interrupted
the signals."

However, a few questions remain to be answered.

If my antenna is buried in the ground, should my ground system be
up in the air? If I make the antenna a delta loop, would this be
called a 'ground loop'? Will my 'grounded grid' amplifier work more
efficiently into a 'grounded' antenna? In case of lightning should
I 'unground' the antenna? When it rains, will my audio sound mushy?
Will I still be able to put out a 'clean' signal? Should my QSL card
have something 'dirty' on it? Will it make my grass grow faster?
Oh-oh, so many things to consider, my brain hertz.

de, Bill - K5MIL

In article <3ovg7r$jtt@taipeh.hl.siemens.de> wscad22@taipeh.hl.siemens.de writes:
>Almost all the computer make interference.
>Here are some tips that can help to reduce the interference of a computer
>
>1. The computer should be in a total clossed metal case
>most of the computer have a plastic front or case. trough this plastic the
>interference leaks out.

This is a good tip. All openings in the case need to be shielded. There
have to be openings for ventilation, but these should be covered with
metal mesh, similiar to the way any other RF equipment is handled. The
case seams need to be joined according to good RF practice. For VHF
suppression, that requires that the joining surfaces be paint free and
a screw should be used every 5 cm along the seam. Alternately, finger
stock can be used at seams. Removable media disk drive openings can
be a problem. Usually, the best course here is to install shielding
behind the drive bay and just suffer the interference when a floppy
is being written or read.

>2. The metal case of the computer must have a good ground connection
>if no ground connection is available try a radiator or make your own ground
>connection

This is not necesarily a good idea. Connection to Earth may or may not
improve interference suppression depending on the topology of the station
and computer installation. Frequently, connection to Earth will *worsen*
interference. You'll need to experiment with your particular layout to
see if this helps or not.

>3. All grounds should be connected at ONE point (make no ground-loops)

This is a good tip. Ground loops will insure mutual coupling of interference.

>4. Place a netfilter beteen the powernet and the power-supply-unit
>most computer power supplies bring a lot of interference on the power net of
>your building/group.

This is also a good tip. However, the filter needs to be bonded directly
to the computer chassis. Filters built into extension cords may or may not
help, and can sometimes make interference worse.

>5. Every connection out of your computer carries interfernece out of your
>computer
>if you have a modem it will increase the interference ot of the computer.
>All devices (if possible) should be places in the computer.
>Every line out of the computer works like a atenna.

This is generally true. However, use of internal modems and such can make your computer more vulnerable to lightning damage. Properly installed and connected, external modems can have as low an interference level, and offer some lightning protection by keeping the telephone line surge suppressor's return path off the computer chassis. Careful thought to Earth connections, if any, can help here. Earthing the modem rather than the computer can serve to keep surge return currents away from the more valuable computer.

>6. Don't place the computer to near to your receiver/transmitter.

Generally good advice. This will reduce cabinet to cabinet induced radiation. However, proper shielding of *both* radio and computer will allow them to be placed adjacent to each other without undue interference.

>7. if you have different AC-groups in hour building place the computer on a other
>AC-group.

This may, or may not, help. Again it is a function of total station topology. If you have any interconnections between station equipment and the computer, such as a packet modem or the like, then you want the systems on common power. Getting on another leg of the power distribution will insure ground loops in this case.

>8. if you have the money by a Class A product (most of the clones are Class C)
>class A devices are the best.

This is wrong (for the USA at least). Class A products are permitted for industrial/commercial zoning and have a higher permitted radiation limit than Class B devices which are permitted for residential zoning. I'm not aware of a Class C rating for computers in the USA (European standards may be different). There is a third rating beyond Class B, however, and that is Tempest. This is primarily for certain secure computer systems, and is *very* well RF shielded.

An additional item, and the most important in most cases, needs to be addressed. That's *monitor* radiation. For HF, and often for VHF, interference, the monitor is the primary culprit. Most of today's computer monitors have plastic cases and no, or inadequate, internal shielding. Use of metal, metal mesh, or foils to shield the cabinets will yield large interference reductions. Alternately, use of special EMI conductive sprays on the plastic cabinets will often work. For shadow masked color tubes, no additional shielding will generally be required for the monitor face. But for monochrome tubes, or Trinitron type color tubes, some sort of tube face shielding will be required. Fine wire mesh, painted flat black, can be installed over the tube face if required. This will do dual duty as an RF shield and a glare shield.

Special attention needs to be taken with the monitor cabling. The video cable will have signal components from the lowest LF to the VHF spectrum, and the power cable will normally have surge currents corresponding to the horizontal sweep rate and its harmonics. These cables need to be well shielded and properly installed to prevent

leakage. Use of ferrites on cable shields will suppress common mode radiation leakage.

The final problem is the keyboard. Most keyboards are totally unshielded, and the key scan matrix can generate considerable interference. Ordinary shielding techniques will make the keyboard unusable, so different methods have to be used. Waveshaping of the scan matrix signals, and adequate decoupling capacitor use will go far to reduce keyboard EMI. Often, however, it's simply better to try several different keyboards and pick the one with the least noise generation. I've found the Focus 2001 brand to be particularly quiet, and to have good key feel and layout, so I've standardized on that one for all my PCs. Other keyboards may meet your needs better. Mice, too, can be interference generators. Again, trying several and picking the least obnoxious is usually the best course.

>
>From the preceeding post, I infer that it is now illegal to possess a ham
>radio programmed (or modified) to operate out-of-band. Is that what you
>are really saying?

What Karl and I are both saying is that the FCC will take having
transmission capability in services for which the radio is not
Type Accepted as prima facia evidence of the intent to *use* the
radio on frequencies for which it is not approved. This stand was
accepted as case law beginning with the prosecutions of outlaw CB
operations outside the CB band, and has been interpreted by the
courts to hold for other services as well. The FCC can seize and
destroy such equipment, and/or use it as the basis for a prosecution
against the owner for operation out of band.

What I've been saying is that such prosecutions are very rare. The
FCC doesn't go around routinely checking amateur radios to see if
the owner has set them up to operate on frequencies for which
Type Acceptance is required. If the FCC were to inspect the equipment,
however, perhaps for some unrelated reason, and found them to be
setup to transmit on frequencies for which Type Accepted equipment
is required, they could seize the equipment and start a prosecution
against the owner.

Note that the basis for these actions is case law, not explicit
CFR-47 regulations.

I don't agree. The main purpose of a repeater is not for emergencies.
It is very easy to break into a conversation. I have been using our
local repeater for ten years and I can only remember one time it was used
for an emergency. If we would stop worrying about someone that might use
it too much, we might get more people interested in the hobby and that
would make it more available to more people and that would make it more
available for emergencies. Lighten up! It's a HOBBY. It's supposed to
be fun!

J. Duffy Beischel (gamma7@ix.netcom.com) wrote:
In reference to Radio Shack products...someone else indicated
what Radio Shack is doing relative to their pricing and quality
of products is simply capitalism.
To that Mr. Beischel replied with...
: Capitalism is not ripping off a customer! I think you need some
: schooling on this issue. Show me a definition of Capitalism that says
: it is ripping off the customer. Profits are great, the more the
: better. Excessive profits at the expense of quality and the consumer
: is still ripping off the consumer.

If Radio Shack is (1) ripping off customers, (2) making excess
profits or (3) selling poor quality products (or any combination
of the above) then their market would be ripe for other
business entreprenours to open up competing businesses.
Since RS has been doing their thing for many years without any
serious competition, I think that is an indication that RS is
marketing products for the correct price and with sufficient quality
to both stay in business as well as avoiding any encroachment of
any competition for their product line.

Last I recall from my Economics 101 was that truly is capitalism
at work.

: >>If everybody could get the chance
: >>to go through a Rat Shack price book to look at their cost and retail
: I
: >>think you would be shocked at the mark-ups.

So what!

Does RS have the best pricing and quality or total product line
I'd like to see? Hell no, but they do what they do well enough
to keep me as a customer...especially when I need some things
quickly.

: Believe it or not, this is NOT new. When I got my Novice ticket in
: 1966, the Ameco study guide had the questions and answers practically
: verbatim from the FCC amateur radio tests.
: Not that I think this is good, just that it's not new. 8^{)
: Bob K2PH

I can add that I used similar AMECO study guides to pass my
Novice in 1957 and my Tech about 18 months later.

All the talk about question pools is a waste of time because
there will always be a set of common questions. Even before they
were published there was a pool of know questions. Indeed, back
in 1957 and 1959 they even had circuit diagrams which one couls
(as I did) simply memorize.

Folks should get on with things and accept it that testing
always has some drawbacks and that amateur testing is not
intended to be an all knowledge testing process but rather (IMHO)
an entrance level testing process.

Is the RSGB in charge of all amateur licensing in Great Britain, rather
than a government department? This would be an natural role for our
ARRL to follow should the FCC ever decide to relegate their amateur-
related duties to a non-government body.

Thanks for posting these weekly bulletins, David.

2975. Long wave and medium wave transmitters

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-14 00:00:00 UTC
From: fkauf@fstgds06.tu-graz.ac.at
Message-ID: <3p52nt$fra@fstgds15.tu-graz.ac.at>
Source record: 246482

where are transmitters for long wave and medium wave?
==========

I'm designing a telecommunication link at about 125kHz using only little power. Now the receiver isn't ideal and electromagnetic fields at frequencies of harmonics of that frequency are disturbing my receiving signal.

My questions are:

* Do you know long wave transmitters in the frequency range 230kHz-270kHz and 355kHz-395kHz and medium wave transmitters in the frequency range 480kHz-520kHz, 605kHz-645kHz?

* Is somewhere a list of long wave and medium wave transmitters for Europe and perhaps other countries? I'm interested in magnetic field strength in about 10km distance of those transmitter and their location too. If you can tell me an estimate of the transmitted power, I can calculate the field strength by myself.

Many thanks,

Friedrich Kaufmann

> Morse code test requirement.

Brian,

Many of us who argue in favor of retaining the code test requirement do so for a couple of reasons. The first is that it is a fundamental method of communicating and affords the ability to communicate with the most rudimentary equipment, arguably making the hobby available to the less economically advantaged. The other is that it serves as a filter, albeit an imperfect one, to eliminate those who aren't genuinely interested in the hobby. Learning something entirely new, even if it's just the moderate mastery of about forty characters, isn't too much to ask to achieve the privilege of holding an amateur radio license.

The FCC would turn amateur radio into another Citizen's Band if they could and only hesitate doing so because they know that they would hit a brick wall of protests. Believe me Brian, fighting for what we believe will best preserve the hobby is well worth the effort.

73,

Tony

Subject: 2-meter HAM vs. Cellu

>> They add a service charge to your 911 call.

NOT! You don't even have to have service on a cellular phone to be able
to reach 911. If you don't have service, then you can not be charged.

If the cellular phone company did not offer 911 or some other emergency
service, I think they would be liable if an emergency did exsist.

From: trogentine@aol.com (TRogentine)
Subject: 2-meter HAM vs. Cellular

Here's another point I havn't seen yet posted. . .

If you have a cellular phone, you are at the mercy of the company supplying the service and the hopes that the tower is still operational. Cellular phones can be stopped by those that run it. If we were to ever lose our freedom in America, that might be one of the things to go.

On the other hand, amateur radio is not at the mercy of no one. If you are involved with any amateur radio clubs, you will notice that they usually are involved with some sort of emergency service operation. Why? Because they are the ones that can deal with any emergency communications and don't have to worry about towers or being switched off because they didn't pay their bill.

I think the big question here is money! If both cell and amateur radio were free, then cellular would be nice for everyone but even then, I wouldn't toss my 2m in the closet.

Subject: 2M/440 usage

Jim Lowman (jlowman@netcom.com) wrote:

: : I cannot fathom why the major companies HAVEN'T introduced a tri-bander;
: : encompassing 2M/440/220. Maybbe it's just a question of Harmonics...

Well, in an area like the LA Basin where the repeater density is high, having a broad-banded rig is an invitation to intermod. Kenwood does offer a 2M/70 cm/23 cm unit, but there isn't that much activity on 23 cm, even here; just a few repeaters.

True, 220 is most commonly offered in single-band HT or mobile units, or 2M/220 HTs. I might make an educated guess at the reasons for the lack of 220 gear, or 220 in combination with 2M or 70 cm: a) 220 is not an authorized band in Japan, where the majority of VHF/UHF gear originates. Japan has twice the domestic ham market that the US has, yet the 220 rigs would be export-only models. b) We have already lost part of the 220 mHz band in this country; perhaps manufacturers aren't confident that that band is going to be around in the long run.

There is a considerable anount of 220 activity here. If fact, our club has 2M and 220 repeaters, but no 440 machine. I'm hoping to be able to change that.

Apologies for the prior message--it was sent in error.

> programming. You decide to put a couple of your favorite amateur
> repeater channels in the empty slots. Assuming you take appropriate
> measures to prevent unauthorized use of your "new" ham station, what
> rules would you violate?

None. As long as you hold a valid license for both usages.

And the problem that people have had with the FCC wasn't with having
radiods modified to use in the marine or public service frequencies,
but in their using non-type-accepted radios in leu of type-accepted.

For example, volunteer fire department has a channel on 462 Mhz. And
most if not all of the volunteers are also hams. If you by Icom U-16
handhelds and have them programmed (by a licensed technician) for both
your 462 public service frequency and a couple of ham channels no
problem and no grief from the FCC.

If on the other hand, you decide to buy the Kenwood TH-77a and clip the
"green wire" so it will operate in the 462 range in addition to the ham
bands, then you are going to face confiscation of your radio. And the
reason for that is because you are using a non-type-accepted radio. Not
because it is "illegally modified" etc. etc.

If on the other hand (third scene) you have a Motorola HT on 462 and a Dualband Yaesu FT-470 that has been modified to work on 462 as well as the amateur bands, no one will even notice usually. Or care for that matter. As long as you remember to use the Motorola type-accepted one on the "job".

All in all it's pretty simple if you just stop and think about what the rules are actually telling you. But of course, some people just want to endlessly debate non-issues.

If you're getting RFI from your monitor, check the background pattern you're
using on the screen- the worst case rfi generating pattern is a grey background
made up from alternating black and white dots- all guns on and all guns
off, switching everything as fast as you possibly can. This is one of the
patterns
we use for rfi testing. Go for a solid color to minimise emissions from the
video portions of the display. The horizontal width link can also be a strong
magnetic radiator if it's unshielded- high currents are present.

SCRBBA sucks. Frankly, it is long past time for someone to start a rival coordination group and simply start assigning pairs (open repeaters) to "Paper repeaters."

440 coordination in So Cal is unacceptable, and something needs to be done. The needs of the many should take precedence over the selfish wishes of a few. SCRBBA needs to go the way of the do do.

My $.02.

I can't believe you are saying this with a straight face. But I appreciate
the humor nevertheless. Look at a map. You might reconsider.

>
> The elimination of SCRBBA is not impossible but it's highly
>unlikely.
>--

I dunno Mike. The fact is that if some other group started coordinating
440, starting with the myriad "paper pairs" maintained as placeholders by
SCRBBA, we both know that the FCC isn't going to do anything. Ham radio is
'way down their list of priorities. And I understand that the ARRL is on to
SCRBBA, and would probably support a group that favored a less selfish
approach to 440 coordination.

>too.

Wake up, man!!! Those guys at R.A.D.I.O. just fought and won a major victory for hams in all of New York state, which will certainly help set a precedent for those elsewhere. It cost well over $25,000. I'd be willing to bet the ARRL didn't contribute one cent towards it, either. The ARRL provides good service when it comes to sending copies of PRB-1, writing letters, etc., but I haven't been able to find ONE CASE where they contributed *any* money towards the very substantial costs of litigation to defend our rights. Now before all you ARRL members start flaming: I too am a member (have been for quite some time) and yes, I realize it is not possible for the League to finance every tower case in the country, but I do think the ARRL could do their membership a great service by at least setting up some kind of fund to get started (perhaps like R.A.D.I.O. is doing by letting hams contribute). For Andy KE6SEH to imply (as he does) that money contributed to R.A.D.I.O. does not directly assist hams and to say that in this case the ARRL provides a stronger voice for hams is simply shortsighted and plain wrong. BTW, I have no connection with R.A.D.I.O. other than I did contribute to their fund, and I think others should too.

Andy, how long have you been licensed? Are you aware of ANY of the history of antenna/tower fights and of the nonsense that hams have had to put up with? An organization which will *directly* fight for fair zoning laws, etc., is well overdue.

: The HT has worked flawlessly and is considered by many to be one
: of the most solid 2M performers on the market. If you would get
: rid of your bitterness, you might gain some objectivity.

My wife gave me an HTX-202 for my birthday, and I was so impressed that I bought an HTX-404 while the sale was still on. Most of the comments on the HTX-202 have been quite positive here on the rec.radio.amateur.* hierarchy. Getting a 2M HT for under $200 and a 70cm HT for slightly more than $200 is hardly an example of excess profit-taking.

I, too, am hesitant to buy much from RS, but a lot of their stuff is not bad quality. My main objection to RS is their insistence on logging customers' phone number suffixes. If this isn't the #1 customer complaint, it must be high on the list. At least I know the manager at one of our local RS outlets (the only one I ever patronize, for that reason) who is also a ham.

anyone have any info on this?

2984. ARRL FIELD DAY - CLASS D/E CHALLENGE

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-14 00:00:00 UTC
From: HWDX09A@prodigy.com

FIELD DAY 1995 - CLASS D & E OPERATORS CHALLENGE
==========

For many years I have been presenting to the ARRL a new thinking on the rules of Field Day and the establishment of new listings for Class D & E stations.

Everyone assumes that the whole country is in need of emergency communications at the same time and that the participation of stations operating from home or on commercial power are of no benefit to the operation.

I disagree with this concept.

A few years ago during Field Day we had an earthquake in California that many stations knew nothing about until after Field Day because the were busy working QSOs any place the wanted.

I proposed after that that the next years bonus points be for contacts within a designated emergency area which would coincide with the call district of the calendar year each year. To ensure Field Day stations copied the W1AW Special Bulletin on Field Day the announcement of these bonus points should have been made a part of the Special Field Day Bulletin as in past years when the slow speed CW contacts were the bonus points.

Besides adding a better goal to the operation of Field Day other than just a contest once the preperation stage was completed, the training of operators in selection of the proper band and time of day to contact the needed area seemed an important part of preparedness for emergency communications.

In light of the Oklahoma Bombing, this year being a #5 would seem appropriate to try such a concept. A test of this idea voluntarily by operators and the results gathered for a report to the ARRL might just add some extra ideas to the Field Day concept.

I would propose 2 operating concepts be tried by stations operating Field Day this year and the reports sent to me so that a presentation with data can be made to the ARRL.

I would encourage ALL stations to participate in Field Day including fixed stations under either the D or E categories.

Stations may even enlist other operators to use multiple transmitters as the portable stations do. This on the basis that not all parts of the country are under an emergency condition. Fixed operation in the 5th call area would be excluded as it is the "effected emergency area."

I would encourage stations to make as many contacts with stations in the 5th call area under the assumption that they are the emergency area in need of communications.

Following Field Day, in addition to submitting your scores to the ARRL, I would like to hear from all Class D & E statiions as to their total number of QSO's during Field Day and the number of QSO's with the 5th call area.

Please also include your opinion regarding the concept of contacting stations in a designated emergency area as a valid principle to be included in Field Day and whether participation by fixed stations outside the emergency area should be encouraged.

A report of these comments will be made to the ARRL as data on these ideas. It is now 3 years since they were proposed to the ARRL CAC with no reply.

This proposed additional activity by no means is intended to denegrate the concept of Field Day as operated by the ARRL, in fact, personally I have not missed participation in Field Day since 1958 when introduced to it by friends and have never missed operating since becoming licensed.

The idea is to enhance the meaning of the operation beyond a mere portable contest and to develope what I consider the most important aspect of any emergency operation - ability to contact the needed area. What good are 1,000 QSO's with New York when the emergency is in Chicago ? Not a one of those 1,000 QSO's did any good to the people in Chicago.

This concept is also to demonstarte the importance of the fixed station on the other end of a portable QSO as needed to complete an emergency message. I believe Class D & E stations should be reported just as importantly rather than an afterfact at the end of the ARRL Field Day report.

Comments on any aspect of this message are welcome.

>a precedent for those elsewhere. It cost well over $25,000.

I think there is lots of "waking up" to do here. Those guys at R.A.D.I.O. did NOT win a victory for hams in all of New York state, unless my lawyering skills have been weakened by RF lately. Correct me if I am wrong, but they won a "victory" at the municipal level. They had the town council decide that one ham could have a permit for a tower. This was NOT a New York Court of Appeals Decision or a Federal Court decision for your district. It has absolutely NO WEIGHT in other areas of the USA, or even in New York state, unless a judge feels like reading it and agreeing with it. And, at that, there are lots of other cases denying towers that the judge might want to read and agree with.....if you ever got to a judge anyway. (Most people cannot afford the time or effort to take a bad decision to the Courts. On that, I applaud the efforts of RADIO to get the issue aired!) I STILL APPRECIATE THEIR EFFORTS, by the way....but I do not appreciate inaccurate hype. I have just come out of a very sobering municipal tower battle here in California.

>I'd be
>willing to bet the ARRL didn't contribute one cent towards it, either.
>The ARRL provides good service when it comes to sending copies of PRB-1,
>writing letters, etc., but I haven't been able to find ONE CASE where
>they contributed *any* money towards the very substantial costs of
>litigation to defend our rights.

Our rights? Again, correct me if I am wrong, but hams have no RIGHTS to have antennas, at least not in the constitution, that I can tell. It certainly has not appeared in the casebooks. We are hams, and we have our bands, and antennas, much at the pleasure of congress. If the US congress decided tomorrow that ham radio was not important, they could just pass a law, and poof, we are all gone. We need to keep this in mind to prevent arrogance in enforcing "rights" that we need to be more polite about. We can keep more friends by doing things reasonably and even humbly, in my opinion.

> Now before all you ARRL members
>start flaming: I too am a member (have been for quite some time) and

.....
>(perhaps like R.A.D.I.O. is doing by letting hams contribute). For
>Andy KE6SEH to imply (as he does) that money contributed to R.A.D.I.O.
>does not directly assist hams and to say that in this case the ARRL
>provides a stronger voice for hams is simply shortsighted and plain
>wrong.

Quite a matter of opinion. If you want to know what helps hams legally,
then R.A.D.I.O. would not, except if they got a Federal Court to
ORDER the town to grant a 70 foot tower or something similar to that.
Even that would only affect hams in the nearby area (your Federal Circuit)
unless you went to the US Supreme Court. THAT would directly benefit
all hams in the US. Please let us know exactly what Court was involved
and exactly what they ordered. It never sounded like a direct help
to hams when I read the bulletins about it, it always sounded like
a plea for money (which I don't really object to, but I don't participate
in unless I have the extra, hi hi.)

>Andy, how long have you been licensed? Are you aware of ANY of the
>history of antenna/tower fights and of the nonsense that hams have had
>to put up with? An organization which will *directly* fight for fair
>zoning laws, etc., is well overdue.

I agree very much with your sentiment. I just think that we need a more
reasoned approach, and the ARRL is the center of such an approach. Only
the ARRL could plot out a strategy for picking out the best cases in
several Federal districts and pursuing them to Appellate levels, then
taking the best on to the top. However, ARRL counsel is aware that such
an effort is not a sure bet, and is probably not a good bet at this time.
There are Federal decisions that seem to say that NO tower is OK under
PRB-1. Federal decisions. That means the local towns can do pretty
much what they want, and the local hams have to use other means to
get up reasonable antennas. It is harder, but not impossible, to do so.

For the last several months, I have sponsored a weak signal contest from my home page (http://www.webcom.com/~af9y/). No one has yet identified the calling station in the recording. The offered prize is currently at $40.

I have now added a text file (courtesy W5UN) containing calls of all 2mtr stations which have made at least one EME contact. The mystery station is contained within this list.

For those without a WWW browser, here's the ftp site:
ftp.webcom.com/pub/af9y/www/

Let's see what today's DSP technology and/or good ears can do with a real world challenge!

Hi all,
I just got an AT&T 9100 900MHz cordless phone, it is really great.
I am wondering if anyone has done any mods on these to improve range,
designed a better antenna(external maybe fed by hardline?), etc.
Or if you know of any FTP sites that may have some info...

Thanks!
Rob

>Dave in Sequim, Wa
>N7DTD

This is the right attitude. It's a hobby: enjoy it.

Unfortunately there's a small number of people who view their ham
license as something more than it really is. It's not a license to be
sanctimonious and "I'm better than you are". I suppose if having a
license makes them feal important and powerful, it's actually quite
harmless (although sad) but they should look at themselves and get a
life.

I think it's important that new hams and would-be hams are not
discouraged by others who would seek to impose their narrow definition
of what amateur radio is. Amateur radio is what each operator makes of
it (within the guidelines of the law).

That is absolutely NOT true! The FCC has not required any licensing
for service shops or technicians for almost 10 years. The licensee is
held responsible for proper operation of his radios, that's all. Its
up to the station license holder to assure himself that his radios are
properly certified.

SB DX @ ALLBBS $OPDX.206
Ohio/Penn DX Bulletin No. 206

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 206
BID: $OPDX.206
May 15, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, Japan DX News, WB2YQH, K9NB, N9XTN, W4/YV5DTA, DF4RD, DC3MF, DJ0HB, OH6LI, VE3HO, ZL1CDX, VP2ML & The DX Bulletin and DL9GOA & DX News Letter for the following DX information.

4U0ITU, ITU HQ. IK1CJO, IK1QBT and I1YRL will be active for two days next weekend on CW/SSB/RTTY, May 20-21st.

5W, WESTERN SAMOA (and 3D2/T2/ZK1). Masa, JE1DXC, has started his third Pacific DXpedition and is currently active from Western Samoa as 5W0XC until May 17th. Operations will be on 80-10 meters including the WARC bands on CW/SSB/RTTY. His next stop will be ZK1 Rarotonga (South Cook Islands and callsign unknown) from May 18-24th. Masa will be active as 3D2XC from Fiji May 26-29th and plans to be an entry in the CQWW WPX Contest. His activity will be from Mamanuca Islands (OC-121) which is not the usual IOTA Fiji Island (OC-016). From June 1-6th, Masa will be active as T20XC from Tuvalu, but before returning home he will be active from 3D2-land (June 7-11th). QSL via JE1DXC.

BV9, PRATAS ISLAND. Wolf, DC3MF, reports in his IOTA news that PRATAS (AS-110) will be activated by an international group with the callsign BV9P. The operation is supposed to start on May 25th. Rumors indicate that Martti Laine, OH2BH, may be one of the operators. EDITOR'S NOTE: DXCC Country status for this one was recently voted down by the DXAC in January.

C6, BAHAMAS. Bill, KM1E will be active from Green Turtle Cay (NA-080) as C6AGN until May 24th. His band activities are unknown at this time, but check the IOTA frequencies.

D2, ANGOLA. D2EV has been heard active on 14213 kHz around 2300z. QSL via DL3KBQ. Meanwhile, "The DX Bulletin" reports Valy, YO3YX, will be in D2-land for the next 6 months. He will be signing D2YX (or YO3YX/4U).

The DXB states to look for him near the bottom of the CW subbands.

HB0, LIECHTENSTEIN. The Wiesbaden Amateur Radio Club will once again be active from this small country June 1-18th. This will be the club's 20th year active. The club will be using the callsign HB0/DA1WA on all HF bands on CW and SSB. QSL via KN6G (95CB) with SASE for the USA and via DJ0LC with IRCs for international contacts. Meanwhile, Manfred, DL8SET, will be active as HB0/DL8SET, from May 24-28th. He will put his emphasis on 6 meters, but nevertheless, he will be active also on the usual bands with 100 watts and a vertical antenna.

HK8, TUMACO ISLAND (COLOMBIA). Pedro will be active as HK3JJH/HK8 from here May 16-21st. Tumaco should be in the Narino Division Group. His bands of activity is not mentioned, but check the IOTA frequencies. QSL via his CBA. Secondly Pedro says that he's willing to activate Gallo Island (ed. I can not find it on the IOTA list.) if he can get the IOTA board to give the island a REF number before operating. Apparntly this island is very difficult to get access to, but he will take the risk if he can get a REF number...

OJ0, MARKET REEF. OH0RJ, OH6EI, OH6LI, OH6LK and OH8PF will be active on all bands including WARC and 6 meters from May 25-29th. The Finnish team will be an entry in the CQWW WPX CW Contest (possibly using the callsign OJ0/OH0M during the contest and OJ0/OH8AA outside the contest). Callsigns will be offically announced May 19th. QSL via OH6LI, Jukka Klemola, Aarontie 5, 31400 Somero, Finland, Europe.

P5, NORTH KOREA (UPDATE). Garth, VE3HO, reports he received a call from Kan, JA1BK, (May 14th at 1500z) stating that Martti was active as P5/OH2BH on 14195 using 100 watts and R5 vertical. Since this operation is currently in a demostration mode, operations will be sporadic at best.

SY, MOUNT ATHOS. Monk Apollo, SV2ASP/A, reports that from the 1st of January 1995 he has never operated on CW. So any QSO on CW from that date on should be considered to be made with a pirate.

VP2V, BRITISH VIRGIN ISLANDS. Matt, NY3F, will be sailing and active as VP2V/NY3F from May 15-29th, operating HF and 6 meters marine mobile with his "co-DXer" Captain Mark, KB9JVP. Matt will be looking for anyone who has a phone patch and would like to try patching through calls for them to the Lafayette area. They can be found on the following times and frequencies: 2200z on 21325 kHz, 2300z on 18125 kHz, 0000z at 14325 kHz, 0100z on 7035 kHz (CW) and during 6 meter openings, 50125 and/or 50115 kHz.

VP9, BERMUDA. Remember, the Radio Society of Bermuda will operate a special event station VP9RND in commemoration of the 200th anniversary of the "Royal Naval Dockyard" in Sandys Parish. The operation will take place from the Clock Tower at the Dockyard on May 20 and 21st, between 1200 and 2000z daily. Operation will be mainly SSB on the HF bands with the possibility of a satellite operation. A special certificate will be available to stations contacting VP9RND and to SWLs as well. Requests

for certificates go to WB2YQH (listen for details on the air).

XV, VIETNAM. As we get near the end of May, begin looking for Rolf, SM5MX, now signing XV7SW from Hanoi on 160-40 meters. Check 1827, 3505 and 7013 kHz on CW. QSL to: Rolf T. Salme, Embassy of Sweden, Box 9, Hanoi, Vietnam.

ZL8, KERMEDEC ISLANDS (PRESENT & FUTURE). Turner, ZL1CDX, sent OPDX the following: "Here is an extract from page 29 of the May issue of "Break-In" the official journal of The New Zealand Association of Radio Transmitters, under the DX column written by Ron Willis ZL2TT;

"A ZL group led by Ken (ZL2HU) has been involved in protracted negoiations with DOC to get permission for a group of six amateurs to visit ZL8. This was due to happen later this year. The group of which I am a member (ZL2TT), was therefore surprised to learn in April that DOC (Department of Conservation) had already given permission to Barry G4MFW/ZS1FJ to visit ZL8 for 10 days from May 5-15th. Barry expects to be active on 15, 20, 40, 80 and to be especially active on 14260 kHz. This activity by Barry should help to take ZL8 off the most wanted DXCC countries list and may well result in this major ZL DXepedition being called off. Watch this space for details."

Barry, G4MFW/ZS1FJ, is now QRTed from Kermedec, but the large demand for ZL8 contacts are still needed, especially for CW. Let's hope this second group of ZLs will receive permission to be active. Meanwhile, Barry's QSL Manager has released the following statement regarding QSLs (excerpt): "As the QSL Manager for the ZL8/G4MFW operation, I would like to clarify some information that has appeared in DX information bulletins and elsewhere. Unnamed sources have incorrectly stated that we are "requiring" or "demanding" donations in exchange for the ZL8 QSL cards. This is not correct. We have never made such a statement and remain puzzled as to its source. Barry prefers that QSL cards NOT be sent via the bureau system, but directly to me, KA1JC (callbook address). I would appreciate the standard SASE, and, in the case where foreign mailing is required, equivalent in US postage would also be appreciated. As is the case with any costly DXpedition operation, donations would be very much appreciated, but certainly not required to help offset the extremely high expenses of this operation.....
Very Best 73/88 Mrs. Phyllis Davis KA1JC"

NEW!!!! VOICE OR FAX YOUR DX INFORMATION NOW! A FAX/ANSWERING Machine is now available 24 hours day. The number is 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring and dial four ones ("1111"). (Note: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with

the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

3001. Re: ? Open 440 repeaters in SoCAL ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-14 00:00:00 UTC
From: rwilkins@ccnet.com
Message-ID: <3p697s$533@ccnet3.ccnet.com>
Source record: 246508

Roger J. Buffington (buffingt@scf.usc.edu) recently wrote
in <3p5b6a$1gv@usc.edu>:

: I dunno Mike. The fact is that if some other group started coordinating
: 440, starting with the myriad "paper pairs" maintained as placeholders by
: SCRBBA, we both know that the FCC isn't going to do anything. Ham radio is
: 'way down their list of priorities. And I understand that the ARRL is on to
: SCRBBA, and would probably support a group that favored a less selfish
: approach to 440 coordination.

OK Roger put your two cents on the table. Post the frequencies of five
vacant 440 "paper pair" repeaters in SoCal. What other cities are on
the same frequency?

0. 446.875 kz6zzz Long Beach San Diego, Ventura, San Bernardino

1.
2.
3.
4.
5.

Just because the coordinating body lists a repeater as closed in
directories, does not mean you can't join the group and use the repeater.
Most repeater groups have to share frequencies with close neighbors so it
is important that their membership understand the constraints of
operation. Because of this they are no longer open to anything and
everything.

IMHO the open systems are the selfish hogs, while the closed repeaters
have learned to share frequencies with other similar repeater groups.

3003. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-14 00:00:00 UTC
From: server@GRAFex.sbay.org
Message-ID: <gate.TJH55c1w165w@GRAFex.sbay.org>
Source record: 246510
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
==========

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
==========

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order
UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your

system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE
and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP
(plus other stuff). Will dearchive PKUNZIPped files, as well as
UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a
utility, such as StuffIt to decode. There are also UUDECODErs
and other de-archivers available. See the index for
/hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==

o If you are ordering from a ccmail system, be advised that ccmail
in its default configuration attempts to automatically UUDECODE
files. If your order is sent in parts, it will hiccup after the
first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite
regularly with messages. And, since the path is incorrect, I cannot
contact you to let you know. Try the PING command to check that
the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file
for correct syntax.

o The file name has changed since the INDEX was generated. Order a
new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post.
Orders are only honored when sent to HAM-server@grafex.sbay.org.
That's the way the software works.

YOUR HELP IS NEEDED:
====================

If you have a program you would like placed on HAM-server, you can email it
uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I
need to take care of quickly.

Jeff -

Of those 7,000 newsgroups, how many are totally bogus and mostly or
totally unused, such as:

alt.brian.saunders.pot.kettle.black
the whole alt.bonehead heirarchy
alt.bubba-love.el-caminoville
alt.bruce.it.was.just.an.accident
alt.butt-keg.marmalade
alt.cancel.bots
alt.check.her.miss-jesus
alt.choad

etc., etc. This list could go on and on. I'm really curious as to how
these newsgroups got started. They certainly don't serve a purpose
because nobody ever uses most of them and their names are totally wierd.

3006. Re: Buckmaster Warning

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-14 00:00:00 UTC
From: rcarpen@DGS.dgsys.COM
Message-ID: <Pine.SOL.3.91.950514182725.5466A-100000@DGS>
Source record: 246513

I note that a number of poeple are bent out of shape by a format change on the Buckmaster disk.

Jack Speer of Buckmaster had a stand at the January 1995 "Frostfest" in Richmond, VA. I enquired about getting format info from him at the time, since I am developing cooperating software. He suggested that I wait for the new edition, which would be out in March, since the format was going to change, effective then.

Was I the only person to hear about the change before-hand? Jack certainly wasn't secretive about it, and he'd never met nor heard of me before.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 14/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 14 MAY AND FORECAST FOR 15 MAY - 17 MAY

1A. SOLAR SUMMARY
Activity: Low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 080/020

GOES satellite data for 13 May
Daily Proton Fluence >1 MeV: 7.6E5
Daily Proton Fluence >10 MeV: 1.8E4
Daily Electron Fluence >2 MeV: 1.7E8 (moderate)
X-ray background: A9.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
15 May 16 May 17 May
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 15 May: 080/020

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 13 May
Learmonth 6 2232 1211
Fredericksburg 10 11
Planetary 08 10

Observed Kp for 13 May: 2333 3223
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
15 May 8 Quiet
16 May 8 Quiet
17 May 8 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

14 May normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
15 May normal normal normal
16 May normal normal normal
17 May normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
14 May 34 Near predicted monthly values to 20% enhanced.

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
15 May 20 Near predicted monthly values to 15% enhanced.
16 May 20 Near predicted monthly values.
17 May 20 Near predicted monthly values.
COMMENT: MUFs at Townsville were near predicted monthly values with
15-30% enhancements from 15-19UT. MUFs at Hobart were near predicted
monthly values to 20% enhanced with spread F during night hours.

The shadow mask offers effective shielding for the fields generated
by the heavy pulses of current in the deflection system, but of
course the beam current passes through the shadow mask. This is
much less of a problem, primarily just an E-field with little range.
It will capacitively couple to very nearby conductors, but doesn't
generate anywhere near the EM fields of the deflection system. Peak
beam current is on the order of 2 milliamperes at peak brightness while
peak deflection currents for a 17 inch monitor are on the order of 8
amperes. The E-field from the beam current will be negligible by
24 inches from the tube face, but without effective shielding the
EM field from the deflection system will wreak havoc with receivers
anywhere in the vicinity. The shadow mask makes a big difference
in preventing these EM fields from escaping the monitor.

: may be located a matter of a few feet from a yagi or quad pushing out
: legal limit power.

I haven't had any problems with mine which is in close proximity to my amateur antennas. I would guess that problems would be unlikely given the frequencies received and the downconverted frequencies which are in the high UHF TV range leaving the lnb. I'll also ask my wife who is with DirecTV.

gary@ke4zv.atl.ga.us (Gary Coffman) says (concerning PC CRT displays):

>If the tube is color, and uses a shadow mask, IE isn't a Sony Trinitron,
>then its face is already effectively shielded.

I say...OOOooooppppps!! Doesn't quite a bit of current get through the shadow mask and impinge on the phosphors to cause the light? The CRT consumes 50 watts or more when really bright. More-than-you'd-like of the power/current is wasted by hitting the shadow mask, but a lot gets through to the phosphors to make light and RFI. At least my shadow-mask monitor is very noisy at VHF when wires are run near the screen. At VHF grounding of the shadow mask would be rather poor in any case.

Still trying to quiet a PC at 50 MHz,

3014. Radio Shack HTX-212 wm

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-14 00:00:00 UTC
From: wendt@indy.net
Message-ID: <3p3pia$3jc@indy-backup.indy.net>
Source record: 246673

I just bought and installed a new RS HTX-212 2m mobile. In testing it out, i got reports of a hum while running low power on a repeater in the area in which you must defeat the automatic offset (below 145.20 MHz). This repeater also requires a PL. Operating on other frequencies in this area (145.15 and 145.19) without PL doesn't bring the hum. I can hear a hum as I transmit, about 600 hz. Running high power (45 watts) eliminates the hum, but I can't run 45 all the time. Do I have a bad radio? Has anyone else had this problem?

3018. re: Wanted:Macintosh Morse Code Tutor etc.

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-14 00:00:00 UTC
From: Michael.Black@juxta.mba.org
Message-ID: <c50_9505140330@mba.mba.org>
Source record: 246677

irimie@newsserver.sfu.ca (Teodora Irimie) is looking for a morse code training program for the macintosh

One of the local stores was offering Macintosh shareware, and rather than produce plenty of disks that might not sell, simply download it from the internet when asked. They get it from a site at the University of Michigan, but I don't know the details. I saw a list of what's available there, and there were three or four morse code training programs for the Mac. I ordered one, out of curiosity, and thinking to infect some youngsters with the hobby by giving them the program.

I had no idea which was best, so I picked at random. I ended up with "MorseTrainer". Unfortunately, I can't tell you whether it's a good choice or not, because it runs only in system 6.0.7, and I'm using an earlier version. From the documentation, though, it does look good. If you can download it for free, I'm sure it's worth a try.

The ARRL mail server, info@arrl.org, has a text file on ham software for the Macintosh. I haven't read it yet. Send them email at that address, the subject header is not important, and put help in the body. It will send back information on how to use the mailserver, and how to get a list of what's available on it.

I do want to mention something interesting that I've come across. There's a free BASIC interpreter for the Mac, Chipmunk Basic. I got it off a local BBS. It's just an uncomplicated interpreter. What makes it interesting is that it includes commands for sending morse code through the speaker. It's rather neat, and has potential for various schemes.

Bob Wilkins n6fri (rwilkins@ccnet.com) wrote:

: We have a similar group now. rec.radio.amateur.info

Hmmm...must have missed that one; will subscribe to it and check it out.

: How about rec.radio.marketplace for new product announcements

: Many of the other large collections of newsgroups have established the
: marketplace group for similar posts. It has been proved quite popular
: with readers, as well as the marketers. One stop shopping.

Either approach would be fine with me. Since there is already a .info
newsgroup, wouldn't it make more sense to simply direct advertisers to the
appropriate newsgroup, instead of wasting the bandwidth (and everyone's
time, surely a more valuable commodity) flaming these vendors? Of course,
there's still the problem of spamming the entire rec.radio.amateur.*
hierarchy.

I have a really gorgeous chart like this, it is put out by the U.S.
Department of Commerace, National Telecommunications and Information
Administration Office of Spectrum Management. It's titled United
States Frequency Allocations - The Radio Spectrum.

They charge for these, I think it was $3.50 a few years ago. (it's dated
March 1987). Contact the Superintendent of Documents, U.S.
Government Printing Office, Washington D.C. 20402.

From: wwerner@penguin.NoSubdomain.NoDomain
Message-ID: <3p8c49$853@hearye.mlb.semi.harris.com>
Source record: 246382

I would like to get some feedback from other Kenwood 241A owners
and the reception in the aircraft band. I purchased this model
because of it's ability to tune in the aircraft band, but am
dissapointed in it's performance. I have already sent it back
to AES in Orlando, they say my experience is not new, the 241A
just does not work well in receiving AM aircraft. In fact, if
I am parked at my local airport the transmissions from the tower
won't even break the squelch, and the signal meter doesn't even
move....to hear anything I must turn up the volume to 2/3, turn
off the squelch, then I can barely make out the conversations.
I would love to hear from other owners to understand if they
have the same poor reception in the aircraft band! As far as the
other features, I love the radio, it is salso ensitive enough to monitor
police 40 to 50 miles away!

Tell that to the Japanese who were at Hiroshima in August of 1945.
E=MC^2 is an idea that can blow a lot of heads off, or light a city.
A gun is just another bit of machinery until someone has the idea to
point it and pull the trigger. It's the idea that kills, the means is
irrelevant, it could just as easily be a 4000 pound Buick, or a bit
of fertilizer and fuel oil. It's the idea, and the will of the wielder
of that idea, that represents the real power. Folk ethos recognizes
that with the saying, "Where there's a will, there's a way.", and,
"Nothing is more powerful than an idea whose time has come."

David, I have the ideal radio for you. It's the GE Mastr II. It has
a small detachable control panel, no fan, a plain microphone with no
extraneous buttons and indicators, gobs of power, a user interface
that even a cop can love, and most important, it's a real radio.

If that's really the case, the other operators were showing poor
operating practices. But is it really the case? Didn't they pause
for at least a second to let you start talking?

>2. Neither station said, "KB8APP, this is xx8xxx." I was taught
>that you should announce another station's call when you first
>call it or respond to it. That's what callsigns are for, I think.
>So, since I was on a low power HT, I wasn't sure who heard me.

Actually, what call signs are for is so the FCC, if they deign to
listen, can easily identify your transmissions. The rules say you
have to identify *once* at the end of a contact, or every 10 minutes
during a contact if it lasts more than 10 minutes. Excessive use
of call signs is just a waste of time and communications bandwidth,
and is one of the more annoying operating habits of some amateurs.

Good procedure on VHF FM is to be brief, to the point, and to minimize
use of unnecessary jargon. Talk as you would to someone standing next
to you by using a natural back and forth flow of conversation, don't try
to imitate Broderick Crawford or the Space Rangers by using excessive
prosigns or jargon. Don't be afraid to interject when you have something
to say, just don't go into long monologues in case you might be doubling
with another station. There's nothing more stilted and boring than fixed
rotation round tables with each station rattling off a string of call
signs at the beginning and end of each transmission.

Then there are those of us who usually don't comment publicly about the ads on telephone posts and newsgroups, but make it a point to avoid the product or service.

Hey, that's not fair! They *do* have answers!

Just not to the questions you have...

:-)

3032. Armed Forces Day Crossband

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-15 00:00:00 UTC
From: Ed_Kessler.WBST845@xerox.COM
Message-ID: <"15-May-95.13:21:58.EDT".*.Sherin_E__Kessler.wbst845@Xerox.com>
Source record: 246435

Split transmit/receive is required. Listen on the military freq, but transmit
in the ham band. Too many times I hear hams transmitting on the military freq.
This is one sure way of getting a pink slip from the FCC. The military station
will announce the freq in the ham band they will listen on.
Once again, the Rochester, NY hamfest falls on the same weekend as Armed Forces
Day.

3033. TEK scope accessories

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-15 00:00:00 UTC
From: mark.will@WichitaKS.HMPD.COM
Message-ID: <mark.will.146.000AE1F9@WichitaKS.HMPD.COM>
Source record: 246436

Does anyone know what the following plug-in accessories are and what TEK scopes they fit. Specifically, I need to know if they will work in a 531 Tektronix scope.

1A2 - Dual trace plug in unit ??
Type L unit ???
53/54D - Differential unit ??

Thanks,

Mark Will

termios is a POSIX invention, unrelated to Berserkeley. I have
cobbled together a substitute termios.h which I have used to
compile GNU screen 3.5.2; it follows the body of this article.
Note that it is in no way complete, and you may have to fiddle
with it to get it to work with your application.

>I also found that the program uses bcopy which is also berkeley. I
>substituted strncpy, are these functions similiar enough for this to work?

No. Use memcpy if you can be sure that there are no overlapping
copies, else use memmove. strncpy will stop prematurely at the
first zero byte.

>The only problem I seem to be having is when I exit the program I have to
>type ctrl-j for a carriage return and things get messed up? I have to log
>out and back in to fix this? Any pointers as to what could be causing
>this?

Clearly, some of the termio c_iflag control falgs are not being
restored properly. Most likely ICRNL got lost in the shuffle.

```
---------
#define termio termios
#define TCSADRAIN TCSETAW
#define TCSANOW TCSETA
#define TCIOFLUSH TCFLSH,2
#define TCOFLUSH TCFLSH,1
#define tcsetattr(fd,t,b) ioctl(fd,t,b)
#define tcgetattr(fd,b) ioctl(fd,TCGETA,b)
#define tcflush(fd,t) ioctl(fd,t)
#define cfgetospeed(b) ((b)->c_cflag&CBAUD)
#define tcsendbreak(fd,n) ioctl(fd,TCSBRK,0)
#define setsid setpgrp
#include <termio.h>
---------
```

Tough luck if you don't like my answer. Your asinine suggestion that I
re-undertake a pointless exercise to prove what everyone in Southern
California already knows is the real cop out.

You are simply being silly.

>Are you saying that one group has assigned itself over one hundred repeater
>channels everywhere in southern California? I somehow doubt this is true.

No, not a system. Jesus, read my post.

Well, then, why don't you read the repeater handbook for Southern
California. Perhaps this will assuage your doubts.

>The largest systems I'm aware of don't have this many radios in their
entire
>system.

See above comment.
The largest one I'm aware of has about 100 radios in their system,
>and these are scattered over five states.

Christ, this has **nothing** to do with what I said.

Perhaps I should have contributed earlier to this survey, but I went shopping for a new mobile 2m/70cm radio last Autumn. I'd just taken delivery of a new car, after several months on the waiting list had built up anticipation. I thought something with a removable panel would be much easier to fit.

Criteria:

1) RF performance at least equal to existing radio (TW4000A)

2) Decent heatsink, NO FANS - I'm prepared to accept limited power and maybe think of adding PA bricks if necessary, but TW4000A barefoot is satisfactory.

3) No reliance on fancy controls/displays in fist mic. We can't use fist mics mobile here. They not specifically illegal, but are treated as an unneccessary distraction and can make you liable in event of any accident. Police stop anyone seen using one (or a hand held phone), then do a fine tooth comb vehicle inspection. I'm amazed how the main manufacturers have no hardware for "Hands free" use.

Well, I surveyed a number of possible radios. The NO FANS criterion weeded out a lot, the fist mic controls that were not on the front panel eliminated a few more. I then started borrowing radios to do intermod and blocking tests, and they eliminated everything remaining.

I conclude that in terms of still functioning in the presence of strong signals (even well out-of-band), reliance on miniature, high speed fans, and suitability for a neat, safe mobile installation, there is nothing currently available new AT ANY PRICE.

Bells and whistles, removable panels, wide band operation etc are just junk if they are on units that just don't work very well as RADIOS. I think that it amounts to choosing between a high quality car of the 60's or 70's (insert your own favourite here) and a current Yugo fitted with all the accessories invented since your classic was built. Me, I'll accept the accessories, and enjoy them, but I want them on a vehicle worth having that doesn't cost me all the performance I've been used to.

Cheers,
David

Greetings All:

A friend of mine just got a Gold Wing motor cycle and wants to
get it set up for 2M mobile. I wonder if there are any Gold Wing owners
on this conference that can offer some tips for interfacing to the bike
intercom system and/or if there happens to be a Gold Wing amateur radio
association? Any recommendations for a specific model or type of rig
or antenna?

Any helpful tips would be appreciated.

TIA|!

Gosh, I liked this post. When using almost any text based mode of
communication, us hams use the terms "73", "CU", etc.
IMHO, these communicate more than just "Best Regards" and
"See you"; they remind us of the tradition of politeness that was
integral to US culture in the early twentieth century.
That was one of the good things about our culture 75 years ago.
Of course there were bad things. The ruthlessness and cruelty
perpetrated by man against man in this century are unprecedented.
I think politeness is a good thing but like it or not, it
seems to be fading from our culture.

Amateur Radio is no more and no less a reflection of our society.
In this graceless age, many (but fortunately, not most) believe
it unfashionable to follow the golden rule. There is no question in
my mind that there are more lids today than when I started in ham radio
twenty years ago. However, a majority of folks continue to be kind,
and probably always will.

>
>OK Roger put your two cents on the table. Post the frequencies of five
>vacant 440 "paper pair" repeaters in SoCal. What other cities are on
>the same frequency?
>

Naw, I'm too busy. There is a group with which I'm affiliated that has compiled a list that is a lot longer than 5 repeaters. Everyone knows it, OM. No reason to tip our hand with specifics. :-)

But I'm right. There's 'way more than 5 paper repeaters. Mucho more. And what's more, a small group has assigned itself over 90 percent of the 440 repeater pairs. They've "learned to share" per your comical definition below. :-)

>
>IMHO the open systems are the selfish hogs, while the closed repeaters
>have learned to share frequencies with other similar repeater groups.

That's a new twist on the word "selfish." Let me see if I get it:
Repeaters that are open to all amateurs are run by those who are "selfish" (by your definition) whereas those that are only for the use of a few occupy the moral high ground because they've "learned to share."

Incredible.

This is what I love about the internet. It's always good for a good howl.

What a cop-out answer!

>But I'm right. There's 'way more than 5 paper repeaters. Mucho more.

I'm sure there are more than 5 "paper repeaters" in most large states.
Theres's almost no way to avoid this because many hams don't follow through.
The key is to find them and re-assign the channels.

>what's more, a small group has assigned itself over 90 percent of the 440
>repeater pairs. They've "learned to share" per your comical definition
>below. :-)

Are you saying that one group has assigned itself over one hundred repeater
channels everywhere in southern California? I somehow doubt this is true.
The largest systems I'm aware of don't have this many radios in their entire
system. The largest one I'm aware of has about 100 radios in their system,
and these are scattered over five states.

3045. Portuguese LigthHouses Award

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-15 00:00:00 UTC
From: etjfonte@ci.ua.pt
Message-ID: <3p7r6m$o7l@titan.ci.ua.pt>
Source record: 246448

********** DIPLOMA DOS FAROIS DE PORTUGAL **********
********** PORTUGUESE LIGHTHOUSE AWARD **********

The main objective of this most colourful Award is to work the LightHouses
from the Mainland and Islands of Portugal.
The Portuguese Islands Award (Diploma dos Farois de Portugal-DFP) is
sponsored by the CLUBE RADIOS DO ATLANTICO - CRA.
The DFP program is open to all Licensed HAMs and SWLs, on all bands.
The diferent DFP Awards are divided in: HF (SSB+CW+Mixed) and VHF (Only
Direct, Tropo, esporadic, MS, EME, etc... repeaters and Relays are not
permited).
Only contacts made after 07th December 1994 are valid for the Award.
There are two basic dificult levels and two Honor-rolls on the DFP:
BASIC AWARD: 5 Confirmed QSOs with CT, CT3 and CU Lighthouses.
ADVACED AWARD: 10 Confirmed QSOs with CT, CT3 and CU Lighthouses.
HONOUR ROLL: 25 Confirmed QSOs with CT, CT3 and CU Lighthouses.
TOP HONOUR ROLL: Above 50 Confirmed QSOs with CT, CT3 and CU Lighthouses.
The DFP (Portuguese Lighthouse Award) can be requested to:
CS1CRA - P.O.BOX 118 - 2780 0EIRAS - PORTUGAL
or VIA CT1BWW - MANUEL ALBERTO MARQUES.
When aplying please send a copy of your LogBook with the next QSO
data: Station Callsign, Date, UTC Hour, Frequency, Mode, RST received,
LightHouse Name/Reference and offcourse don't forget to send the QSL Cards,
so they can be checked by the DFP Award manager.
Members of CRA don't need to send QSL cards for checking.
The mailling expenses of the return of the QSL cards send to be checked
by the award Manager are to be covered by the applicant.
The cost of each Award is of US$5, each 10 Lighthouse endorsement costs
US$2, Top Honor-Roll plaque US$50 (More than 50 Lighthouses confirmed).

NOTE: Each member of a Lighthouse DX'pedition qualifies imediatly for
the Basic Award, on the Award will be mentioned " OPERATOR ", the activated
Lighthouse will also be credited for the operator score.

3047. Re: Dumbing down?! How could it get any dumber?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-15 00:00:00 UTC
From: Joel McClure <mcclure@cadcam.atg.gmeds.com>
Message-ID: <3p7np2$ar9@mloeff01.elec.mid.gmeds.com>
Source record: 246450
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Greg's mention of poor operating procedures prompted me to respond with a personal experience. I upgraded to "Tech Plus" on May 12 and had my first 2m QSO's this past weekend. I was trying out my new 2m ht through various repeaters. On one repeater, I announced my call and asked that anyone who could copy me respond. I immediately heard two call signs in response and got ready to transmit. However, the other two stations immediately started talking to each other, and since neither mentioned my callsign when resonding, I wasn't sure if anybody had heard me. I listened for a bit and then heard one of the other stations say, "I don't know where that first station went. You'd think after asking any station to respond, he'd stick around and reply." Well, I didn't respond because:

1. I couldn't get a word in edgewise.

2. Neither station said, "KB8APP, this is xx8xxx." I was taught that you should announce another station's call when you first call it or respond to it. That's what callsigns are for, I think. So, since I was on a low power HT, I wasn't sure who heard me.

Maybe I'm not familiar enough with 2m operating procedures, but I think some guidance from more experienced stations could have helped. After all, I was announcing my "mile-long" temporary call, i.e. "This is KB8APP temporary KT." I had another short QSO with a guy who kept saying things like, "Is the other station still there?", and "Other station please respond." (We were having repeater trouble.) He said my signal was good, so I think he was too lazy to use my callsign, although he kept giving his. I think this type of operating is the equivalent of saying "Hey, you!", or "Hey, guy, . . " when you know somebody's name. I thought 11m CB was the place where callsigns weren't required, there was no etiquette, and operation was a "free for all". Again, I think callsigns are for a purpose other than plastering on your ball cap, the back of your RV, or on a t-shirt.

Maybe I'm just too naive, but I can see why irritation builds about 2m, since I'm getting irritated already.

Joel, KB8APP

If you are talking about buying new radios, the HT-600 is no longer in production. Too bad because it's an economical, "bulletproof" hand held and still had a market.

Another great little number Motorola is making now is the Visar. They are small (half of a 600), capable of 4 watts and 16 channels. I think they run about US$1000-1200.

For mobile use the Maxtrac is a good buy. I think the basic ones are less than a grand. They don't perform as well as some higher end Motos but they are tougher than any Japanese amateur rig.

The Radius line might be an option and the cost is lower. But I have no real experience with them. I don't think the available software allows them to go in to the ham bands.

:
: Wake up, man!!! Those guys at R.A.D.I.O. just fought and won a major
: victory for hams in all of New York state, which will certainly help set
: a precedent for those elsewhere. It cost well over $25,000. I'd be
: willing to bet the ARRL didn't contribute one cent towards it, either.
: The ARRL provides good service when it comes to sending copies of PRB-1,
: writing letters, etc., but I haven't been able to find ONE CASE where
: they contributed *any* money towards the very substantial costs of
: litigation to defend our rights.

I think I need to set a few things straight. I don't know of any
cases where ARRL bore the cost of the fight, but their legal council
has been directly involved in just about every important case in the
country at an advisory capacity, and typically, files friend of the
court briefs where it is waranted. The league field organization in
the guise of the Volunteer Coucils is also an important cog in this
whole situation. Several of the local fights that have occured
in Silicon Valley that I'm aware of locally have had direct input
from Mr. Imlay, and were handled by volunteer councils. This helped
defray the cost significantly (even with this type of help - the cost
has reached better than $25,000 in the two cases I'm most familiar with.)

: Now before all you ARRL members
: start flaming: I too am a member (have been for quite some time) and
: yes, I realize it is not possible for the League to finance every tower
: case in the country, but I do think the ARRL could do their membership
: a great service by at least setting up some kind of fund to get started
: (perhaps like R.A.D.I.O. is doing by letting hams contribute). For

First, hopefully, I've demonstrated that ARRL isn't sitting on it's
hind legs when it comes to tower fights. The organization DOES help
significantly. And I'll take this opportunity to remind EVERYONE that
if you reach court..you've already lost in some ways, because this type
situation is best remedied in a political setting(the league has also
helped in a big way in this area locally!) The best mechanism is to
grease the skids before a sitution gets as hot as a court case by
working the system and getting favorable local legislation in place
FIRST!

With that said, I think that some sort of legal fund would be a grand idea..but I also see the flaw in this propossal. Just think about the first time that the fund was used for one case, and a second case was denied support....think about that scenario for a second. What would the guy who was denied help think...How would he react? What criteria does such a fund use to to decide who is worthy, and who isn't? There aren't simple answers to these questions.

: Andy KE6SEH to imply (as he does) that money contributed to R.A.D.I.O.
: does not directly assist hams and to say that in this case the ARRL
: provides a stronger voice for hams is simply shortsighted and plain
: wrong. BTW, I have no connection with R.A.D.I.O. other than I did
: contribute to their fund, and I think others should too.

My personal opinion is that local funds are a better way to go because the problems I've pointed out with a nationally sponsored fund are avoided. At the same time, the ARRL does need to stay meaningfully involved in trying to get the situation changed with regards to PRB-1. Both organizations need help!

: Andy, how long have you been licensed? Are you aware of ANY of the
: history of antenna/tower fights and of the nonsense that hams have had
: to put up with? An organization which will *directly* fight for fair
: zoning laws, etc., is well overdue.
:
: Mike, KB3RG

Mike, I AM a ware of the history of antenna/tower fights...I've been indirectly involved in a couple of the major battles here in CA...land of Howard vs Burlingame and Foster City.

I also know that both your stance, and Mr. Millers can be viewed as the two extremes. Niether side is completely right or wrong. The truth happens to be in the middle some where.

The facts are simple. The league has a pretty fair program runnning to help with PRB-1 fights. This program is partially done by having Chris get involved as an advisor to local volunteer councils, and the thru the field organization which provides local volunteer councils, and tries to get involved, where possible, with local(city) legislation. The other aspect of the program involves a lagenda at the national level where the league interfaces with FCC and Congress. Of course, all of the above has to be done on a budget, and multiplexed with other situations like NPRM comments, etc.

At the same time, organizations like R.A.D.I.O have helped a couple local amateurs defray what can be an egregious amount of money in trying to establish the ability of amateurs to setup and operate stations per our federal licenses.

It seems to me that there is both room and a need for both responses.

>reasonably and even humbly, in my opinion.

Governments can't grant rights, not in the Constitution, nor by fiat. Governments can only *infringe* rights. Maxwell's equations define our natural right to use radio. The CA'34 and other laws and regulations set limits on the government's infringement of that natural right. If we agree to jump through certain hoops first, the government will agree not to infringe our natural right, otherwise the government could send its jackbooted thugs bursting into our homes everytime we tried to emit a dit. Government draws its power from another natural right, that might makes right, a corrollary of F=MA. It's only our social compact of agreeing to allow government to infringe certain of our rights that allows governments to function in a relatively peaceful manner. If we refuse to give consent to those infringements, then we become revolutionaries. Governments don't like revolutionaries. They like to call them criminals, and will exploit F=MA to its fullest to deal with them.

Scott,

Thanks to you and others, I'm learning a lot here. I haven't been
to "up to date" on the commercial requirements.

But, as I've gathered from other postings - you could answer your 2nd
paragraph question with your 1st paragraph statement. No, it's not legal
to use this radio (in a type-accepted service). You still need a
type-accepted radio, and you still need a station license, the station
licensee is held responsible for type-acceptance.

Did I get that right? I wonder how many station licensee's know that if
someone buys or mods a radio, that violates Type-acceptance in their
service, and use it on the air under their station license - they may loose
their station license? Wowser.

I would like to hear from anyone who has successfully modified a standard plastic case computer monitor to reduce RF interference (no theories, please!)

My monitor generates broadband noise from low HF well into VHF, and the noise can be heard on antennas as far as 50 feet away.

Did you find that the RFI was mostly radiated (not conducted)?
What did you do to reduce the interference?

Thanks,
Wayne Estes WD5FFH wayne@csg.mot.com

3059. Milwaukee, WI Repeater Links

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-15 00:00:00 UTC
From: helix@solaria.sol.net
Message-ID: <3p83p9$brn@solaria.mil.wi.us>
Source record: 246462

I've figured out what the various links are for the Greater Metropolitan Area of Milwaukee, Wisconsin (ya-her-day, eh?) and I feel that these frequencies will be of great benefit to those who've had some trouble getting into the two largest repeaters on VHF within the Milwaukee, WI area.

As these frequencies are listed within the amateur radio spectrum, those who feel that these frequencies should be kept private are badly mistaken as amateur radio is for everyone. Therefore, I am listing these frequencies for everyone's use:

145.130 (output) / 144.530 (input) PL = 127.3 Hz (MAARS):

links are listed below with their guessed locations:

222.270 (output) / 223.870 (input) PL = 127.3 Hz (NW site)
222.290 (output) / 223.890 (input) PL = 127.3 Hz (main site)
222.320 (output) / 223.920 (input) PL = 127.3 Hz (UPS site)
222.340 (output) / 223.940 (input) PL = 127.3 Hz (SW site)

146.910 (output) / 146.310 (input) PL = 127.3 Hz (MRC):

links are listed below with their guessed locations:

446.525 (output) / 446.525 (input) PL = 173.8 Hz (SOUTH site)
446.250 (output) / 446.250 (input) PL = 173.8 Hz (NORTH site)

Enjoy!

Vie carenis ennundum!

>

Reason is that the US only has _half_ of the "A" group assigned to it, i.e., AA through AL. Some other country has AM through AZ. Since you can't indicate which half of the As you're in with a single letter, there are _no_ A7x oe A7xx calls; they'll all be AA7x through AL7x, etc.

3062. What HTs will do Indy cars

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-15 00:00:00 UTC
From: Greg Smith <greg.n.smith@daytonoh.attgis.com>
Message-ID: <D8MyJ5.6F1@ranger.daytonoh.attgis.com>
Source record: 246465

I was over in Indianapolis this past weekend at the time trials and many folks had UHF scanners to listen in on crew-to-driver communications and ABC/ESPN transmissions.

There is a posted frequency list for the various teams and I was wondering if those frequencies (roughly 450-465 and some in 800 MHz) are AM or FM.

Can HTs such as the Kenwood TH-79D be modified to recieve in these bands? I know many HTs can be modified for wide receive but I don't know HOW wide they go.

Next year I want to be able to monitor the cars and I figure if I can combine that with a new HT purchase (which I'm planning anyway), I might as well kill two birds with one stone.

Anyone ever monitored Indy cars with a dual-band HT?

Comments appreciated.

Greg KB8YBS

3063. Re: ? Open 440 repeaters in SoCAL ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-15 00:00:00 UTC
From: obrien@Aero.org
Message-ID: <3p88gp$534@news.aero.org>
Source record: 246466

I responded to this thread more or less to stir the pot, I confess, and I seem to have drawn at least one conspiracy theorist out of the woodwork (lamentably short on specifics, though, otherwise things might get interesting).

One thing that really is interesting is that the ARRL Section Manager, Phineas Isenbice, who is every bit as much of a character as his name implies, tried to get a response from all of the Southern California repeater coordinating bodies. He sent each of them a letter asking for a list of officers and procedures. Only the 220SMA replied.

This made him somewhat irate, and he began to call for the establishment of more responsive coordinating bodies. TASMA followed with a proxy fight and a management turnover (caused by an unrelated chain of events), and has become a much more activist organization. SCRBBA remains solidly in the background, no change.

We know several facts. The FCC has just been completely reorganized and obviously has other fish to fry, in the form of billion-dollar spectrum auctions and the establishment of bands for PCS, both involving political heavy hitters. They have no time for hams. Malicious interference doesn't even get their attention any more, to such an extent that repeater groups have developed their own, new legal tools to deal with it, in the form of civil suits for harassment, not involving the FCC. Repeater coordination battles involving a single coordinating body are going to be even lower on the totem pole. And, if there are TWO coordinating bodies, then the FCC has a legal out: the law doesn't say that there can't be two bodies, it just says that uncoordinated repeaters can't interfere with coordinated ones. It doesn't say who gets to do the coordination. If competing repeaters get coordinated by competing coordination councils, the FCC could and doubtless would take the out that both are "coordinated", so there's nothing for the FCC to do. Which is just how they like it.

Realistically speaking, as far as amateur radio is concerned, Southern California has about as much law and order as Mogadishu. The only thing which can get the FCC to move is malicious interference during a disaster, which causes governmental bodies to call the FCC, in which case they MUST respond...and do. This is little publicized, as the bozos who get flattened thereby do not tend to make much noise about it afterward.

The membership of SCRBBA is made up mostly of the people who built up the whole notion of repeater operation in the first place. They are savvy, shy of the spotlight, and know how to make things work, at least for their membership. Newer hams and repeater mogul wannabes are out of luck, the places at the table have been taken by older hams. Any younger hams in SCRBBA are there via an informal 'apprenticeship', having started

to take over management of existing repeaters.

Pressure on SCRBBA is going to increase, as more and more new hams not part of the establishment want to put up repeaters. There are going to be a lot of obstacles in their way, but there are going to be more and more such hams, as the codeless tech license continues to take hold. SCRBBA's greatest weakness is its inability to deal with rapid change. My own opinion is that fractures will appear, but a return to the "coordination wars" seems unlikely. In the absence of an effective FCC, that would result in drastic measures, legal and illegal, taken by both sides in an effort to forward their cause. Nobody wants that.

Gary Coffman is exactly right. If you want a lively repeater, make it so. Announce that you're monitoring. If no one comes back, indicate that you'd appreciate a signal report. Take the duck off your HT, put it back on, and say "This is [your call here], we just made some antenna changes and would appreciate a quick report." If someone comes back, thank him for the report and listen for the undertones that tell you if he (or she!) has time for a chat. "We're looking forward to helping out with the parade this weekend, will you be coming?" "We heard Fresno on 2m simplex last night, do you ever work SSB?" "We finally got some time to operate after doing my son's birthday party last weekend, do you have kids too?" You'd be amazed where the conversation can go if you open the door. The next thing you know, you've got a roundtable going on Boy Scouts or contests or computers or whatever. And if someone needs help, your repeater will get the reputation of where you're likely to find someone friendly.

Well, that's OK. I didn't volunteer to do a study for you, old chap, and I don't plan to have you volunteer for me. But look in the repeater handbook at who has the coordination. Then try telling me that I'm wrong about 440 being locked up.

As far as paper repeaters go, try them yourself. Get your rig cranked up, and do a study. Since you are eager to have one done, go do it.

I'll wait for the results of the study you want done and that you say you are going to do.

Harvey Sattin (hsattin@nectech.com) wrote:
: What is deviation?

With regard to amateur radio? or socially?
I'll answer with regard to radio only.
When using frequency modulation, the carrier frequency is
increased by an amount proportional to the amplitude of the
modulation signal. A person speaking into a microphone
causes the frequency of the carrier to increase during half
the cycle and decrease during half the cycle. The greater
the amplitude of the signal, the greater the deviation. On
2 mtrs the standard maximum deviation is +/- 5 KHz.
That's a short answer, for more we can go off line.

buffingt@scf.usc.edu (Roger J. Buffington) wrote:

>Tough luck if you don't like my answer. Your asinine suggestion that I
>re-undertake a pointless exercise to prove what everyone in Southern
>California already knows is the real cop out.

Pardon me, but it wasn't me who asked you to prove anything. You made the
comment that you had proof, but weren't going to tell...nanner nanner boo boo.

That's what I thought was a cop out. If SCRRBA is really screwing people, and
you have proof of this, why not post it?

Your post said one group had assigned 90% of the channels to themselves.
Assuming there are about 200 possible repeater channels on the 440 band, more
actually in CA because they use all of 440-450, that if one group used 90% of
them they would have more than 100. Hyperbole won't prove your point.

>Well, then, why don't you read the repeater handbook for Southern
>California. Perhaps this will assuage your doubts.

I know more about the SCRRBA than you think. In spite of what many people
think, there is no conspiracy. Like many frequency coordinators, they have a
tough job to do for no compensation. They deal with it the best they can.
I'm sure there are frequencies available on other bands if someone HAS to have
a repeater.

Is what you're mad about really SCRRBA, or is it the fact that they allow
closed radios to exist? Or is it really the closed radios themselves you
object to?

Hi all, I tried to post this before, but the transfer got screwed up so I'm posting it again.

All of the following is used Amateur equipment and will probibly be listed on packet too...

Kenwood TS-940S/AT In great condition with service and user manuals. $1200 shipped to lower 48. Will deliever personaly in the following areas; southeastern Penn. New Jersey, Metro NYC, Anywhere on the DelMarVa Peninsula. and most of Maryland. If I deliver it, I will work on the price, but the cost of shipping on such a unit (with a built in supply) is high. Email me and We can talk Turkey.

Kenwood SP-230 Speaker $30 shipped to lower 48
MFJ 949E Versa Tuner II with box and manuals shipped to lower 48: $80
Timewave DSP 9 V3.0 Shipped to lower 48 (you get the idea) $150
Daiwa PS-140II 14 amp supply: $60
MFJ 422B Keyer on black base Bencher paddle $90
Kantronics KPC3 with all manuals and box $80
Heil Sound Pro Boom set with DX element and footswitch wired for Kenwood 8 pin: $90
Spiro SP-5 75ft dipole with 100ft of 450 ohm line $25
Cushcraft AR2701 dual band verticle $40
All this stuff is in very good condition. If interested, e-mail me at Wcoyle@DCCC.edu.
Tnx & 73

Roger J. Bluffington (buffingt@scf.usc.edu) recently wrote in
<3p8c1c$adr@usc.edu>:

: Well, that's OK. I didn't volunteer to do a study for you, old chap, and I
: don't plan to have you volunteer for me. But look in the repeater handbook
: at who has the coordination. Then try telling me that I'm wrong about 440
: being locked up.

What do you mean by "locked up" I couldn't find that definition in my
handbook.

: >>what's more, a small group has assigned itself over 90 percent of the 440
: >>repeater pairs.

There are TWO Hundred 440 repeater channels. OK some small group is using
180 of these frequencies. That leaves 20 available and you say that over
five of these are vacant. What keeps that small group from assigning these?

: About a year ago I added up the repeater pairs and divided by the # of
: assignees. If you want to refute my study, do your own and post it here on
: the newsgroup. :-)

You have not posted any study that is meaningful. What do you meen by the
term "assignee" as used in your definition. Most coordination bodies
recommend frequencies for use. You seem to indicate there is a small
group that assigns frequencies.

Since you will not be needing any more than three repeater frequencies to
cover the dorms at the USC campus, give us just two vacant frequencies
that can be used by a good high level open repeater group in southern
california.

1.
2.

Is it better to get these frequencies assigned by the small group or
should the repeater be coordinated by the coordinating council?

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

>10 Khz seems common, but is that the case on all bands? I realize
>beacons are many times on 5 Khz spacing, maybe CW too.

2 meter channels for the 146 MHz and 147 MHz sections of the band in most of the US are on 15 kHz centers. In parts of the US, they are on 20 kHz centers. In the 145 MHz section of the band, they are on 20 kHz centers. That's for repeaters and recognized FM simplex channels. In practice, however, simplex operation occurs anywhere the operators like, and the granularity of the radio determines the minimum channel step. That's usually 5 kHz for most radios.

On 440 MHz, the channel spacing is 25 kHz, but FM simplex similarly may be on any 5 kHz step.

For SSB and CW operations, all bets are off. Those operations aren't channelized, and step size is purely a function of the radio, usually 100 Hz, but on some radios 10 Hz or even 1 Hz steps exist. Radios with older analog VFOs have essentially infinite granularity. In practice, of course, stations tend to space themselves out so that their spectrums don't overlap.

From: Wayne_Estes@csg.mot.com (Wayne_Estes)
Subject: Dipole antenna--shape and SWR

The characteristic impedance of an inverted Vee is about 50 Ohms, resulting
in an SWR of about 1:1 with 50 Ohm coax.

The characteristic impedance of a flat dipole is abobut 75 Ohms, resulting in
an SWR of about 1.5:1. This is still a pretty good match. I wouldn't worry
about anything less than 2:1.

Doug,

If you're in Macau, you might pay a visit to the CPT museum in the
centre of town at the Central Post Office. Visit it in the afternoon.
You might have to wait 10-15 minutes for someone to get the key and
open it for you. They have old telecom equipment including an exchange
from the 1930s. Lots of Marconi VHF equipment, a broadcast studio
and a collection of stamps (it is a PTT museum after all!!!).

Paul,

I passed the 20 wpm test last year using just the code tapes.
Get some good ones (I used the ARRL standard tapes) and then go for it,
morning and evening. I followed along in the book for a while, to
associate the printed characters with the sounds, and then started testing
myself without the aid of the book. Do it each time until you hit your
limit and go a little bit past it. It's one of the most
frustrating/mesmerizing/fascinating things I have ever done. I knew I was
bad off when I started being able to interpret messages from my windshield
wipers...

I wish you success.

Subject: Q: Marine Radio Freq's?

I am in the market for a marine VHF radio for my watercraft, but all
the catalog says is that they are VHF, and that they recieve 88 chanels and
transmit on 57 channels. What I would like to know is:

? What is the specific frequency range of typical marine radios?

? Do they transmit/recieve in AM or FM?

? What is the frequency spacing of the channels?

The specific brands I am looking at are Icom, Apelco, Humminbird, and
Shakespeare.

I would like to apologize in advance if this is not the correct forum
for these questions, but I am rather new to this.

Any info is apreciated.

Subject: What to buy

We are looking at getting 3 handheld units to be used around a school campus
for a few students, we can not use the distric radios for this, we have a small
budget, looking at around $200 per unit... I have been looking at the
following 2 radios that are at Radio Shack, the VHF-FM business transceiver,
and the UHF-FM personal transceiver. They both are 1 watt, I like the UHF
one a bit better because it is smaller... What is the FCC licenseing cost on
the business one ? Because these would also be used in a room that we use
wireless mics in, I kind of like the UFH one better, because our mics are
VHF, don't need any more crap on those... I guess my main question is, the
school is about half brick, it is only a high school campus, not huge, what
would be the top performer ?

<grin>

Not totally accurate. The majority of packet bulletins have been arriving
into VK1 via the gateway for a couple of years now. VK1RGI's loss has meant
we have lost connectivity with NSW stations directly. We still get @VK2
bulletins from Melbourne and Wagga.

We are hoping to have the VK1RGI node back up on Mt Ginini before the winter
snows block us out.

Carl,

>73,
>Alan WB2OPA

Gee, I wonder how LogMaster Plus/Plus manages to get advanced
information on changes to the CD formats from Buckmaster ?

Here we are in this thread based upon the fact that Buckmaster has
just changed their CD and left all the 3rd part logging programs hanging
in mid air not conforming to the new Buckmaster format.

None of the logbook software people at Dayton knew in advance of the
problem except for some user reports of problems just days before the
Dayton Hamvention. I know for one (WJ2O) who I told personally had
not heard about it yet.

Buckmaster of all the CD suppliers should have notified logbook
providers of the changes as they have signed confidentiality contracts
with these people before they supply them with the information how
to read the Buckmaster encrypted database.

I wonder what other CD users, software writers, etc had any prior
information on the Buckmaster change or its non-compatability with
any of the logbook or DX Cluster software.

So far it seems like LogMaster Plus/Plus is the only one who knew of
the changes but he wasn't on display at Dayton to show it (hasn't been
for about 3 years as I recall).

Your last guess is no doubt the right one - all of the above. I used an attic antenna for several years and I believe that one of the most sneaky problems is the presence of resonant or near-resonant pieces of wire or plumbing nearby. Aside from the SWR issue, they can really distort your radiation pattern without it being very obvious. If you find you work out well in some directions but not in others, suspect that.

Actually, an SWR of 1.5:1 is not too bad, as long as your transmitter will load to full power. If you reduced it to 1:1, you'd see very little difference. Have fun with it - I earned DXCC with mine!

Next time you're in Dayton, OH, Listen to 145.110 and 145.190.
None of those examples were embelished to make them sound worse.
Those were all actual conversations. If I hadn't heard it, I wouldn't
have believed amateur radio could get this "dumb."

: Doug,

: If you're in Macau, you might pay a visit to the CPT museum in the
: centre of town at the Central Post Office. Visit it in the afternoon.
: You might have to wait 10-15 minutes for someone to get the key and
: open it for you. They have old telecom equipment including an exchange
: from the 1930s. Lots of Marconi VHF equipment, a broadcast studio
: and a collection of stamps (it is a PTT museum after all!!!).

: 73, Fergal

If you come to Rochester, NY USA on business you might want to check out
the Internationally famous Radio museum in East Bloomfield, NY (thats
what their flyer says) It's open May to October Sundays 2 - 5PM and
durring the summer its open Sat 2 - 4 and Wed 7 - 9 June July and Aug.
It's closed Holidays. No Admission charged. Founded by the Antique
Wireless Assoc. They have a LOT of working displays including working
spark-gap transmitters. (716) 657-7489 or (716) 657-6260.

Actually, there have been several E skip openings on 10. Really
nice one on Sunday.
Although the sunspots have just about hit bottom and you can't
expect much outside the US, keep an ear out for Es on 10 (and 6) these
Spring and early Summer days.
See you there!

If the tube is color, and uses a shadow mask, IE isn't a Sony Trinitron,
then its face is already effectively shielded. If the tube is monochrome,
or a Trinitron, then fine wire mesh, painted flat black and and installed
against the tube, will form an effective face shield, and serve as a glare
filter in the bargain.

Where you have to concentrate your shielding is around the plastic case.
You can either use metal, or a conductive spray. GC markets a spray that
is effective.

There is nothing wrong with working a station this way, but note that DXCC rules, for one, forbid using such QSOs for DXCC credit.

Rule 6: "All contacts must be made with amateur stations working in the authorized amateur bands or with other stations licensed or authorized to work amateurs. Contacts made through "repeater" devices or any other power relay method (aside from Satellite DXCC) are invalid for DXCC credit."

From: Michael.Black@juxta.mba.org (Michael Black)
Subject: Wanted 10 watt army surplus bc band transmitter

rilowite@aol.com (RIlowite) is looking for:
"army surplus broadcast band transmitter which ran
about 10 watts AM and was used on army bases for entertainment and
emergency broadcasts to the troops. I need such a unit for the purpose of
helping the hearing impaired members of our church."

I don't think this is going to work, since where's the license going to come from to operate such a transmitter even if you do find it?

INstead of trying to track down a surplus transmitter that might not have been made in large quantity, that you don't have the model number for and which probably couldn't be licensed and can't be operated without a license, better to look at the alternatives.

You could try a "wireless microphone" for the am BC band that is legal there, since it can only have an input of 100 mW or less. The range might not be so good, though. It would depend on the size of the church.

If you're going to wireless microphones, you'd do better to go with an FM wireless microphone, since FM tends to sound better.

A better path to look into would be an inductive loop. Most hearing aids have a switch that selects a mode for use with a telephone. It connects a pickup loop (like you used to be able to buy to record phone calls without making a connection to the phone) in place of the microphone. The signal from the phone goes from the inductor in the receiver of the phone to the inductor in the hearing aid, rather than converting electrical to acoustic in the receiver, and then back to electrical in the microphone o
f the hearing aid.

With these telephone pickups in the hearing aids, more uses were created for them. The basic idea is to put a loop of wire (I think it's usually a few turns) around the room where you want to distribute the sound, and then feed it with an audio amplifier. The hearing aids in the telephone mode picks up the audio flowing through the loop.

This is good for the people with hearing aids, since hearing loss is not just a matter of things being not as loud, but a loss in dynamic range and in frequency response. Keeping the hearing aid in "the loop" means that the agc and filtering in a given person's aid is not eliminated, which might happen if you switched to radios and headphones. ALso, since the part of the aid that goes into the ear is fitted to the persons ear, they are a lot more comfortable than a pair of headphones.

FOr those with hearing loss and no hearing aids, you could always whip up some battery operated amplifiers fed from a pickup loop, to get the same effect. You could probably scrounge up some old "walkman"-type gizmos that people are throwing out due to mechanical failure, and use the amplifier in them.

I don't have any specific details about the inductive loop, but I have seen articles on the subject over the years. Look in a library with a good selection of back issues of electronic magazines.

SB QST ARL ARLB052
ARLB052 Oklahoma help completed

The primary Amateur Radio operation in support of recovery efforts in the bombing of the federal building in Oklahoma City ended at 4 PM on Tuesday, May 2.

Amateurs had maintained a network continuously since 9:15 AM on April 19, with more than 300 operators from Oklahoma, Kansas and Texas providing communication through the Oklahoma City Autopatch Association repeater.

Amateur operation then shifted from the blast site to coordinating Salvation Army activities, on a simplex frequency. As of 4 PM on May 4, Amateur Radio operators in Oklahoma City had conducted emergency communication for more than 360 hours.

ARRL Public Information Coordinator Tom Webb, WA9AFM, said that those involved in the post-bombing communication effort credited numerous disaster drills, established Amateur Radio networks, emphasis on proper on-air procedures, and experience in weather spotting nets for the success of this operation.

Later this month, Oklahoma City amateurs will meet to discuss their activities and for a debriefing.

Subject: is there code tapes for 35wpm ?

I just recently passed my extra. so theoretically, I can copy
20wpm in an ideal condition. but in reality, I have to deal
with a lot of qsb and qrm, and the hardest part is people sending
with uneven spacing (usually from straight keys sending at 20wpm).
so I am having a hard time copying during qso's.

I find though, that copying 13wpm is now very easy, no matter how
bad the code is sent. so I was wondering if there are code tapes
I can use to up my speed to 35wpm so I can copy 20wpm code sent
badly.

I recently got the KB6MT words tape, which does 35wpm for only 30
minutes of the 3.5 hour tapes, so I want to know if there are
other code tapes out there for higher speeds > 30wpm.

thanks

Karl, you need to change "routinely seize" to "once in a blue moon seize".
FCC enforcement in this area is so lax as to be nearly non-existant. That
doesn't mean you're wrong about it being illegal though.

Subject: PACKET RADIO TO THE INTERNET?

Hello and many thanks to everyone reading my article.

I've started `packet radio-to-the Internet' mail gateway service
on 1.2GHz FM since last March, so I would like to know how active
or popular such connectivity is now in your side.

The straightforward question is as follows:
Can you access the RBBS or gateway which handles the Internet
mail through packet radio? Are you running the system to serve
the Internet mail exchange for local packet radio users?

In this context, the term `packet radio' includes neither radio
TCP/IP nor FWD-NET. In the system of mine, the users are able to
connect to my TNC by the simplest manner in which reading and
writing mails from/to the world are processed by the easy menu-
driven user interface. The figure below illustrates the outline
of the current operation.

<FIGURE>
ANT - XCVR - TNC - PC[Win/Terminal] } USER 1

Brian,

Why does your e-mail bounce? I tried to take this off the
news group but the mail bounced.

I quoted your entire post less the header. At least all that
got to me.

They should pull Glen's ticket for broadcasting, interfering
with communications in progress, interfering with an emergency
net. If what the Georgia emergency net alleges is true about
being given two hours to get off "his" frequency he doesn't
deserve to be called ham gentleman or anything other than "the
operator formerly know as K1MAN".

I am sure you and Glen have some guard house lawyer rational
why he should be allowed to be a broadcaster on the ham bands
but I don't buy it. This kind of crap is going to end up in
actions that will be detrimental to the majority of hams.

I have read his packet postings and when propagation was right
heard his broadcasts. All of it is self serving ego stroking
nonsense.

I urge the concerned amateurs to write the FCC asking for
engorgement of rules. If the rules aren't clear enough for
Glen then perhaps they can be clarified. I suspect many of the
other innocent bystanders in this would support a stronger
broadcasting rule and a specific exemption for W1AW.

Enough on the news group. My e-mail address is posted you
can reply there.

Subject: Yaesu FT530 keypad sequences

Ahhh not correct...

to reset the factory memory, you do the MR and VFO buttons..

to open the 800Mhz band up after the jumper removal, you hold
down the UP and DOWN arrows while powering on....THIS resets the
band edges and also turns on the 800-950 Mhz band...

Where does it say that it is illegal to have a modified radio that is capable of transmitting out of the ham bands? There is no type acceptance requirement for our gear (except certain external amps) as long as you don't stray from authorized freqs. So what do you mean when you say "illegally programed to operate out of band"?

There are legitimate reasons for having out of band transmit capability. I have used my transceivers overseas where FCC type acceptance is worthless.

> greg
>
> kd6ven
>
> vector@inferno.com

No, Greg, you are slightly misinformed about the FCC requirements. The jumper cannot legally be left in place to allow front panel programming. As I stated earlier, this violates the FCC type acceptance and makes mere POSSESSION of the unit illegal. Refer to the FCC Rules (47 CFR) Parts 2, 15, and 90 for details. That's why there is a printed warning in the official Icom service manual telling the service tech to remove the jumper before the unit is handed to a commercial user. Federal courts have upheld the FCC's presumption that possession of a non-type-accepted unit indicates that the user intends to communicate using equipment that is prohibited under the rules.

Under Part 97, your Amateur license does allow you to pick any frequency within the 2M band from the front panel of your rig. The FCC commercial rules in Part 90 are not so generous as to allow anyone to simply buy a radio and program it to the frequency of their choice. Thus, if you decide to mix two or more radio services into the same radio unit, you have to abide by the strictest of every requirement where there is a difference between the various service rules.

The FCC periodically issues warning statements to the amateur community reminding hams that they are prohibited from operating on Part 90 public service frequencies with their non-TA'd amateur equipment. They also routinely seize ham radios found to be illegally programmed to operate out of band and suspend or revoke the user's amateur license.

While unable to directly answer your question, I can offer my tips about pc-rfi.
I wrapped several ferrite split-cores on every wire and cable inside my machine.
This reduced the noise quite a bit. Also getting a good bond between the case,

power supply and motherboard. Now only some highly active graphics cause interference. My line-voltage cables also have ferrite cores and are shielded. My GASFET is mast-mounted however. Best of luck.

From: rathinam@worf.infonet.net (Sethu R Rathinam)
Subject: REQUEST: source for frequency chart

I am looking for a good quality wall chart (large - about 36"x24") that covers frequencies from DC to visible range or higher, with the different bands and their use/characteristics marked. The more information on it, the better. I would appreciate any pointers on where I can get them. Thanks in advance.

Write to Kenwood at:

Kenwood Service Corp.
2201 E. Dominguez St.
P.O. Box 22745
Long Beach, CA 90801-5745

Send them a copy of your MARS license and they will send you the info
back. This is how I've always done it and the reply is very prompt.

Design is not the problem with the R.S. stuff in some cases, the
problem is the quality of components and manufacture. By the way R.S.
designs very little anymore. Most of the stuff is designed by the
R.S. contractors.

ideas).

Capitalism is not ripping off a customer! I think you need some
schooling on this issue. Show me a definition of Capitalism that says
it is ripping off the customer. Profits are great, the more the
better. Excessive profits at the expense of quality and the consumer
is still ripping off the consumer.

I have built four different radios from kit or scratch (QRP). The ability of a resistor to handle the flow of electrons, like anything else, depends on the QUALITY of the resistor. Little parts are also not causing the severe imbalance of trade.

>(To see capitalism in action among hams peruse rec.radio.swap.)

I know that most other retailers are not marking up their goods beyond keystone. Jewelry, I don't know about or care about.

>>Duffy
>
>Say Duff, did RS turn down your credit application? Your anti-RS posts
>lead me to believe you have some ax to grind. You used to work for them -
>did you get fired?

Jeffy, I worked for RS for five sickening years. Never got fired, but I did quit in December of 1977. Just could not take the way they ran their company. In fact, I was one of the few employees at the retail level they begged to keep and the only salesperson in the entire district that made it through five years without getting fired.

Turned down my credit application? Get a life! Who needs credit from RS if you don't buy anything from them except little stuff. I would venture to say that my income exceeds yours. You may need credit at a 21% interest rate. I guess people with poor credit ratings have to pay higher interest rates and that is why they must go to the stores to get credit. I you really using one of those RS credit cards? Can't believe you are paying those interest rates! But if that is the only credit you can get....well I understand.

>>Duffy

For both of you, I suggest that the same would be true of the
folks from the "YaeComWood" consortium and quite possibly from TenTec
as well, or R.L. Drake, or..... well, you get the idea.

Whatever anyone wants to think of Rat Shack and some of their
more dumb in-store policies, I think they at least deserve an "E"
for effort in getting into Amateur Radio at all. Even if their motives
were pure profit in taking advantage of the large numbers of
no-code techs, if we make it profitable for them to continue doing
so it will make life for a lot of hams a great deal simpler in
terms of having more outlets to acquire some gear.

While I doubt that we could expect RS to ever market a
10-80 meter all mode rig, some expansion seems likely in their line.

: > a fluorescent light or a dimmer.

I thought I'd point out that the QST article talks about AC hum
generated by the *antenna system* changing, as opposed to being
generated by an interference source. The diodes in an AC power
supply turn on and off, and change the contribution of the AC
lines to the antenna system. Thus, you only hear the hum
on relatively strong stations. On the other hand, interference
sources like lights or dimmers wreak havoc on weak stations,
and can be heard even when you aren't tuned to a station. It
can be awfully difficult to find an interference source that
isn't there...

Nikola Tesla did extensive research into this in the late 1800's (See
Colorado Springs Notes) and early 1900's.

He received several patents on such systems.

James Harris Rogers also received numerous patents for such systems
around 1910-1919. I have copies of most of these patents and literature.

The US military used Rogers' system extensively in WWI. After that it
sort of disappeared off the face of the earth (no pun intended!)

It is an intriguing system and I will experiment with it one of these days!

>using it! ... Would that be worse than not using it at all?

Yes, it would. Proper amateur practice dictates that one should use simplex when at all possible, and leave repeaters for what they were intended -- low power or mobile stations incapable of working simplex.

Hearing two people sitting in their shacks across town yack on the local repeater is annoying.

When I hear two people using my repeater that I know can work one another simplex, I tell them to move off. Sometimes they have a good reason for being on the repeater -- a third party that can't work simplex is coming on, or they are waiting for someone, etc. Some leeway is good, as long as it isn't abused.

Subject: LOWEST RFI FROM WHAT COMPUTERS ?

In article <3ovg7r$jtt@taipeh.hl.siemens.de> wscad22@taipeh.hl.siemens.de writes:
>Almost all the computer make interference.
>Here are some tips that can help to reduce the interference of a computer
>
>1. The computer should be in a total clossed metal case
>most of the computer have a plastic front or case. trough this plastic the
>interference leaks out.

This is a good tip. All openings in the case need to be shielded. There
have to be openings for ventilation, but these should be covered with
metal mesh, similiar to the way any other RF equipment is handled. The
case seams need to be joined according to good RF practice. For VHF
suppression, that requires that the joining surfaces be paint free and
a screw should be used every 5 cm along the seam. Alternately, finger
stock can be used at seams. Removable media disk drive openings can
be a problem. Usually, the best course here is to install shielding
behind the drive bay and just suffer the interference when a floppy
is being written or read.

>2. The metal case of the computer must have a good ground connection
>if no ground connection is available try a radiator or make your own ground
>connection

This is not necesarily a good idea. Connection to Earth may or may not
improve interference suppression depending on the topology of the station
and computer installation. Frequently, connection to Earth will *worsen*
interference. You'll need to experiment with your particular layout to
see if this helps or not.

>3. All grounds should be connected at ONE point (make no ground-loops)

This is a good tip. Ground loops will insure mutual coupling of interference.

>4. Place a netfilter beteen the powernet and the power-supply-unit
>most computer power supplies bring a lot of interference on the power net of
>your building/group.

This is also a good tip. However, the filter needs to be bonded directly
to the computer chassis. Filters built into extension cords may or may not
help, and can sometimes make interference worse.

>5. Every connection out of your computer carries interfernece out of your
>computer
>if you have a modem it will increase the interference ot of the computer.
>All devices (if possible) should be places in the computer.
>Every line out of the computer works like a atenna.

This is generally true. However, use of internal modems and such can make
your computer more vulnerable to lightning damage. Properly installed and
connected, external modems can have as low an interference level, and offer
some lightning protection by keeping the telephone line surge suppressor's
return path off the computer chassis. Careful thought to Earth connections,
if any, can help here. Earthing the modem rather than the computer can
serve to keep surge return currents away from the more valuable computer.

>6. Don't place the computer to near to your receiver/transmitter.

Generally good advice. This will reduce cabinet to cabinet induced
radiation. However, proper shielding of *both* radio and computer
will allow them to be placed adjacent to each other without undue
interference.

>7. if you have different AC-groups in hour building place the computer on a other
>AC-group.

This may, or may not, help. Again it is a function of total station
topology. If you have any interconnections between station equipment
and the computer, such as a packet modem or the like, then you want
the systems on common power. Getting on another leg of the power
distribution will insure ground loops in this case.

>8. if you have the money by a Class A product (most of the clones are Class C)
>class A devices are the best.

This is wrong (for the USA at least). Class A products are permitted for
industrial/commercial zoning and have a higher permitted radiation limit
than Class B devices which are permitted for residential zoning. I'm not
aware of a Class C rating for computers in the USA (European standards may
be different). There is a third rating beyond Class B, however, and that
is Tempest. This is primarily for certain secure computer systems, and is
very well RF shielded.

An additional item, and the most important in most cases, needs to
be addressed. That's *monitor* radiation. For HF, and often for VHF,
interference, the monitor is the primary culprit. Most of today's
computer monitors have plastic cases and no, or inadequate, internal
shielding. Use of metal, metal mesh, or foils to shield the cabinets

will yield large interference reductions. Alternately, use of special EMI conductive sprays on the plastic cabinets will often work. For shadow masked color tubes, no additional shielding will generally be required for the monitor face. But for monochrome tubes, or Trinitron type color tubes, some sort of tube face shielding will be required. Fine wire mesh, painted flat black, can be installed over the tube face if required. This will do dual duty as an RF shield and a glare shield.

Special attention needs to be taken with the monitor cabling. The video cable will have signal components from the lowest LF to the VHF spectrum, and the power cable will normally have surge currents corresponding to the horizontal sweep rate and its harmonics. These cables need to be well shielded and properly installed to prevent leakage. Use of ferrites on cable shields will suppress common mode radiation leakage.

The final problem is the keyboard. Most keyboards are totally unshielded, and the key scan matrix can generate considerable interference. Ordinary shielding techniques will make the keyboard unusable, so different methods have to be used. Waveshaping of the scan matrix signals, and adequate decoupling capacitor use will go far to reduce keyboard EMI. Often, however, it's simply better to try several different keyboards and pick the one with the least noise generation. I've found the Focus 2001 brand to be particularly quiet, and to have good key feel and layout, so I've standardized on that one for all my PCs. Other keyboards may meet your needs better. Mice, too, can be interference generators. Again, trying several and picking the least obnoxious is usually the best course.

Subject: LOWEST RFI FROM WHICH COMPUTER?

gary@ke4zv.atl.ga.us (Gary Coffman) says (concerning PC CRT displays):

>If the tube is color, and uses a shadow mask, IE isn't a Sony Trinitron,
>then its face is already effectively shielded.

I say...OOOooooppppps!! Doesn't quite a bit of current get through the shadow mask and impinge on the phosphors to cause the light? The CRT consumes 50 watts or more when really bright. More-than-you'd-like of the power/current is wasted by hitting the shadow mask, but a lot gets through to the phosphors to make light and RFI. At least my shadow-mask monitor is very noisy at VHF when wires are run near the screen. At VHF grounding

of the shadow mask would be rather poor in any case.

Still trying to quiet a PC at 50 MHz,
73 de Bob w3otc

Believe it or not, this is NOT new. When I got my Novice ticket in 1966, the Ameco study guide had the questions and answers practically verbatim from the FCC amateur radio tests.

Not that I think this is good, just that it's not new. 8^{)

Subject: Re: Dumbing down?! How could it get any dumber?

You have some very good points Ed but what you "missed" was the ongoing
"no-code techs are evil" issue. I maintain that it isn't the operating

class that determines the worth of an operator but rather his* intellect.
(*gender non-specific)

There are so many people who get on the air and just drone on and on and on
about minutia. What really drives me crazy is when some butthead
keys up and THEN thinks ("ahhh...") about what he's going to say for 15 to
20 seconds before the first word come out of his toothless mouth.

Then there are the people who think they are "cool" and despite being
fairly inexperienced, feel the need to have a presence on EVERY area
repeater. They call in unnecessarily-redundant weather info during
"storm nets" just so everyone can hear them on the air (of course the
wind is always blowing 20 mph faster and it's raining like a monsoon
at their QTH) and in general they just have annoying radio manners.
There's one guy who repeater hops. He'll have a conversation and then
once he's pissed off enough people, he moves to the next. I'll bet he
hits three or four repeaters and hour for a couple hours and then
starts all over.

I'm a pretty easy person to get along with but I'll tell ya,
there are some calls that have been indelibly burned in my memory. If
I ever meet these morons in person, I'd like to sucker punch one of
them...1/2 :)

Bottom line: Nothing wrong with casual conversation. I agree with you Ed,
all tech-talk can get boring. My first post that started this particular
thread was focused on really boring hams who are boring on the air because
they are boring people. I think people need some balance in
their lives. That's why I think amateur radio needs to attract a more
diverse group of people, including youngsters. If "the cancer"
continues to spread, we'll end up with VHF CB. If we tactfully
discourage poor operating procedure ON THE AIR then we will, if
nothing else, make people think about it. Those who continue to abuse
the airwaves will do so because they are low-class individuals, but NOT
because they lack insight or training.

>
>From the preceeding post, I infer that it is now illegal to possess a ham

>radio programmed (or modified) to operate out-of-band. Is that what you
>are really saying?

What Karl and I are both saying is that the FCC will take having
transmission capability in services for which the radio is not
Type Accepted as prima facia evidence of the intent to *use* the
radio on frequencies for which it is not approved. This stand was
accepted as case law beginning with the prosecutions of outlaw CB
operations outside the CB band, and has been interpreted by the
courts to hold for other services as well. The FCC can seize and
destroy such equipment, and/or use it as the basis for a prosecution
against the owner for operation out of band.

What I've been saying is that such prosecutions are very rare. The
FCC doesn't go around routinely checking amateur radios to see if
the owner has set them up to operate on frequencies for which
Type Acceptance is required. If the FCC were to inspect the equipment,
however, perhaps for some unrelated reason, and found them to be
setup to transmit on frequencies for which Type Accepted equipment
is required, they could seize the equipment and start a prosecution
against the owner.

Note that the basis for these actions is case law, not explicit
CFR-47 regulations.

|> > use.

Hams are among the most idiosyncratic and difficult-to-organize
people on earth, and repeater owners even more so. I doubt this situation,
nor that of SCRBBA, will change soon.

Here's one for you: yes, SCRBBA is made up of 'good old boys'. Has
it occurred to you that most of the people with access to hilltops around
LA, including site owners and managers, are in SCRBBA, and like things
just fine the way they are?

Hilltop access is very VERY difficult to get in LA, and most of
those who've got it are in SCRBBA. A new body isn't going to get very far
if none of its members can put up anything but low-level repeaters.

Of course none of this is black-and-white. Sure, some folks not
in SCRBBA would have no trouble placing repeaters. But most of the folks
with hilltop access are already part of the establishment. The point is
not that a new organization couldn't succeed, but that it would immediately
face severe and probably fatal challenges on several fronts at once.

440 coordination is full up in Los Angeles and nothing will change
that except outside force. The FCC is currently completely uninterested in
enforcement of any kind, no matter how severe the infraction, and this
attitude has gotten so bad that even the hidebound, reactionary ARRL has
started publicly scolding the FCC in reply comments...to no effect. And
the ARRL itself has nothing to do with coordination (except for the new
219-220 band, and a first-time conference of coordination bodies they're
trying to organize).

The elimination of SCRBBA is not impossible but it's highly
unlikely.

Duane,

In spite of this latest marketing promo from RS, I can tell you that they don't really want their people spending there time just answering questions. They naturally want them to sell as much stuff as possible. That's business.

On the other hand, they don't pay people enough to attract the brightest and most knowledgeable people. They way that RS has structured its inventory system, penalizes the manager when the salespeople sell products that are on sale. In order to balance out the margin loss they take on selling sale items, the RS salesperson has to push a bunch of stuff on the unsuspecting customer. These are items with very high markups. For instance, the Tandy Extended Warranty or TSP, batteries, cables, parts of any type. If the customers just buy sale items and nothing else, the manager looses his/her shirt.

This is why there is so much turnover in RS management. Tandy has structured it to be a loosing deal for them. However, as long as the customer knows how to protect themselves if they choose to buy RS stuff, they won't get stuck buying a bunch of accessories with sky high markups.

Subject: REPEATER WANTS SIGNAL REPORTS

I've recently activated a repeater in Greene County, New York and would appreciate some signal reports.

The repeater is on 145.45 mHz with a -600 khz input and is located in the Jewett/ Windham area of the Northeast Catskills. The antenna is at about 2000 ft AMSL and the ERP is around 40 watts. It can be identified by it's multitone beep and CW ID " KA2PAP/R ".

Please post your reports here or Email me at Iannace@AOL.COM. The repeater is currently at a temporary location and will be relocated to a 3100 ft mountain peak in a few months.

Subject: Re: Dumbing down?! How could it get any dumber?

I wish I heard something like that on our local repeater, We have over
two hundred hams on our local repeater. Average age is 114. I monitor
it in when I am home and sometimes it will go 3 or 4 hours without anyone
using it! Lately I hear a couple of high school kids using it. I think
that is great. They seem to be very good about following procedure.
They may talk about something I'm not interested in but at least they are
using it! Ham radio is a hobby! It is supposed to be fun! We talked
about putting a phone patch on our local repeater. That was voted down
as everyone thought it would be used too much. Would that be worse than
not using it at all?

>Great! I wish I could hear some of the same.

Ah, but you see, *I* would find those topics utterly boring. I've
already survived high school (long ago, and just barely), I don't
rollerblade or fly a kite, my college-choosing days are over, and I'm
not in the market for any gear. So, if I may take your attitude, how
dare anyone talk about such boring stuff when I'm listening?

I bought my HTX-202 for $189. I wouldn't call that a huge mark-up.
The HT has worked flawlessly and is considered by many to be one
of the most solid 2M performers on the market. If you would get
rid of your bitterness, you might gain some objectivity.

Just because the comments are negative does not mean I am bitter. In
fact, as stated before, I made a fair amount of money working for them.
Not as much as I could have made somewhere else, but it was fair.

My comments are related to how RS treats customers, reasonable pricing,
anti-consumer extended warranties, and an overall decline is quality of
their products the last 25 years.

If you don't want to accept the message fine, I understand. But let
the buyer beware!

>service frequencies with their non-TA'd amateur equipment. They also
>routinely seize ham radios found to be illegally programmed to operate out
>of band and suspend or revoke the user's amateur license.

This statement might be a little strong. I haven't looked recently,
but I regularly read the FCC news releases last year, especially the
FOB release, which details such actions as you describe above. I
didn't see any such seizures/license revocations. Can you point at a
few documented cases?

Thanks!

Marty,

There is a company in Maine that make such a computer program. The companies name is DeLorme
, I believe I have the spelling correct. They make a program that will reference you to an actual street map, although i think their map is finer than a road map. many cases it shows streets, farm lanes, driveways etc. The program costs about $ 400 to 500 dollars the last I knew. Lots better than APRS, but much more expensive. You can actually drive around town with this system and see where you are.

Nobody said they have the RIGHT answers :-).
TS
KN4TX

Whenever I'm stumped I come right out and tell the customer "Gee, that's a tough question and I don't know the answer but 'I don't know' still qualifies as an answer, doesn't it?" It's usually good for a chuckle and my customers appreciate the candor. ;-)

Come on folks, if you want to spend a lot of time dealing with people that have an engineering background then you're usually going to have to go elsewhere and pay a *LOT* more for the products they sell. 8-(

If it bothers you that you know more about the HT than the fellow that's behind the counter then take your business to a commumnications specialist like Motorola. They've got some SHARP people. Or do like I

did. Try to raise the average competence of your local store by working there part-time. It's interesting work and you get to meet the darndest people. ;-> (anecdotes later)

I was out of town last weekend but my co-workers told at least three regular customers I'd be in Saturday morning. They'll be in for some technical help. I really enjoy helping and will even engineer some custom solutions but will only go that far if there is the possibility of a reasonable sale behind the work or if I can rationalize it as good customer relations. I work on commission and can gross $8-9/hour but only when I can turn them over quickly. Consultation doesn't always pay very well and often costs me money. $-)

Some questions I've fielded:

"Hey you. I gotta question. My old clock radio quit working so I bought a new one at the discount store. I want to try to fix this old one. I think this burned up thing here is bad. What do you suppose it was and what can I do to fix it?"
"Golly fella, I haven't a clue, but the small parts are in the back of the store ..... Can I help who's next in line?"

"I just spent $1150 on the big screen TV and VCR at the discount store and I can't get them to work right. How should I wire them up to work with my stereo and my old vcr?"
"Follow the directions in the manuals and ask your sales person for help. Give him the opportunity to earn his commission ..... Next"

Or I could tell you about the young guy that came in one night with his girlfriend. He appeared to be drunk and quite upset because we didn't have any resistors with a "R" value, only "K"s and "M"s. He wanted to buy ONE 41R resistor. He was QUITE certain that was what he wanted because the value "R41" was silkscreened on his GF's circuit board. I wasn't about to take the time to argue with him about it so I just played dumb.

It works both ways. ;->

From: "Stephan M. Anderman" <sanderman@delphi.com>
Subject: This Week in Amateur Radio #111

Here is a summary of news items covered on edition #111 of "This
Week in Amateur Radio", North America's satellite-delivered audio
bulletin service, for the week ending 19-May:

1. FCC Issues NPRM Affecting Part 97 Rules
2. ARRL Asks Commission to Dismiss W5YI "Anti-bulletin" Proposal
3. Part 15 Users Side with ARRL on Allocations at 902 MHz
4. Hams in Oklahoma City End Emergency Communications Operation
5. "EZSATS" with Bruce Paige, KK5DO
6. Memorial Service Set for New England Microwave Pioneer
7. "The RAIN Dial-up" from Chicago
8. Upcoming Special Event Stations with George Bowen, N2LQS
9. "This Week" Announces Return to Satellite Next Week
10. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
11. Weekly Propagation Forecast
12. "Amateur Radio Newsline" - Edition #926 from Los Angeles
13. Additional Special Events over Memorial Day Weekend

"This Week in Amateur Radio" is a weekly amateur radio news and
information service, in audio newsmagazine format, which is produced
by Community Video Associates, Inc., a New York State not-for-profit

corporation based in Albany, New York.

The program is carried each Saturday at 7:30 PM (EDT). Due to the loss of our satellite transponder, the program will be carried live only in the Albany, New York area (145.33 MHz) and on 160 meters via WA0RCR at 1860 kHz. Affiliates may obtain the program by landline on a scheduled basis by contacting the producers. "This Week in Amateur Radio" will return to its home on Telstar 302, transponder 21, 5.8 MHz wideband analog audio, next Saturday, May 20th.

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @ WA2UMX.FN32AW.ENY.NY.USA.NA and on various landline bulletin board services.

Is August for gate one (clubs) or for all the rest of us?
Did he give any reason for the delay?

I've heard a bank in Pittsburg will be the gatekeeper. I wonder how they will fill the requests once they start the program. How will they resolve conflicting requests?
I asked this question on this group before and no one really knew. I'm wondering _how_ the gatekeeper will do their job...

On a related topic, about a year ago I vaguely remember a thread about the theoretical number of callsigns available by license class. Since I upgraded to extra in January, I have been waiting to see if it comes up again. Does anyone remember these calculations or have posts from a year ago that show how many callsigns are theoretically available?

> it. Any answers?
>
> Curtis Wheeler - San Ramon, CA
> KD6ELA / GROL / Pvt. Pilot

Nope, that does not violate any previously referenced rule. In fact I run
exactly that configuration in my vehicle, along with some military freqs
for which I am personally authorized. As long as I the user cannot change
the programmed frequency (which per 90.203g can only be entered by the
manufacturer, service, or maintenance personnel) I have not violated the
type acceptance. Therefore the unit can be used legally on Part 90
channels, the ham bands, and those military freqs where the FCC T/Ad
transmitter is considered acceptable.

You are PROHIBITED (see 90.203g again) from leaving the programming jumpers
in place or ,modifying the unit so that it can transmit while in the
programmable mode. That was the scenario proposed for the Icom commercial
unit, and it is a clear violation.

At the risk of sounding unpatriotic... I would prefer to buy American,
but if the American worker wants my dollars, let him earn them. If he
is so disinterested in his job, so concerned with shorter hours and
more benefits that he can't produce a competitive product, that's his
problem... not mine. I work for my money and I will spend it on the
best quality product at the best price. In many cases, unfortunately,
that may not be "one of ours."

Component prices, you say, are cheap. I'll give you one to think about
concerning buying American... At one point in my career with RS, we
were shipping memory boards to the Far East to have them populated with
American chips (Motorola I think) and shipped back to us. It was
cheaper than the cost of the chips alone in the USA.

It's a strange world out there!

Ed

If you have read the various threads over the past few years concerning
the RS 202 handheld, you'll find that they have many problems. Not
every radio, but a number of them. Some hams have reported returning
their radios four and five times. Seems there must be a real quality
problem with these radios.

So it is not surprising that the radio is displaying some interesting
problems for the owners.

Heh, I've got one of those. I did the switch trick too. By the way, did
you change the PIN diode in the TR switching? There is a service bulletin
on the Kenwood BBS concerning intermod problems in the front end. It was
driving me nuts with mix of Channel 2-TV and KUSC (105.5?) creating a
mix right on top of the packet repeater I was trying to use.

You're saying that a commercial radio can be programmed for any frequency
on which it is type accepted and its operator is licensed, but that you
can't enable operator entry on the front panel for commercial bands. It
seems it should still be legal for the operator to put the jumper in place,
program whichever frequences they need, then remove the jumper before
operating the radio. Or are you saying that it is illegal for a consumer
to program their own radio? If so, who is permitted to program a radio?

There is a LOT of interest in the UK in Heathkit at the moment.
Something to do with expensive JA boxes and a recession!

The UK magazine Ham Radio Today is featuring a series of articles
about old radios and the HW-101 recently appeared.

The usual warning about Heathkit is that the build quality is VERY
dependent on the skills of the builder. Few were factory built, most were
owner built. Have a good look around the insides of the radio and see how
many dry joints you can spot.
(Heath UK are reputed to have have a piece of equipment returned with a
"will not work, please fix" comment from the owner/builder. The guy used
either adhesive tape or glue to hold the components together!)

I've only had a few Heathkit items, the nearest I came to a tcvr was an HW-7,
so I can't be sure but I believe that their design was such that you could fix
them quite easily and ESPECIALLY if you have the manual! Plenty of space
inside and none of this surface-mounted component stuff to ruin your eyesight
and finger-tips.

p.s. Heathkit closed down in the UK partly because they were EXPENSIVE,
(xtal 2m set cost more than a systhesised box from Yaesu), and partly
because their after-sales service from their London based shop was
not good. I think the shop's staff wanted to sell their computers
and neither cared, nor knew, about anything else.

John:

Our club here at work bought such a rig to use for an emergency communications setup (i.e., there's an earthquake, the phones are down, and we need to call for a fire truck; (we're out in the country))

Our primary consideration was ease of use, as we'll probably not use this radio very frequently, so we needed something we could figure out without a manual, at least for the basic stuff.

We wound up getting an ICOM IC-2340H. It also has the attraction of the ICOM service center in nearby Bellevue, WA.

The radios we looked at were:

Icom IC2340H, Yaesu FT-5200, Standard C5718, and Kenwood TM-733A.

We've only had the ICOM for a couple of weeks, but so far I really like it. It's relatively easy to use, the duplicated controls for VHF and UHF make it easy to tune and control. We are also across the street from a fairly high powered UHF pager transmitter, somewhat notorious for causing intermod problems. We haven't yet heard any intermod of significance on the ICOM from it.

A personal note on the Kenwood: playing with it in the store, I got it locked up solid, just trying to tune to a memory channel. So locked up that the salesman had to cycle power with reset depressed to unlock it!

I did not find it's user interface at all intuitive.

The standard was also fairly unfriendly I thought; *All* the controls are on the microphone, and I just looked at it in confusion for a minute and put the mike down.

I did a score sheet on the radios we looked at, and here it is:

Wt Icom Std Yaesu Kenwd
3 Ease of changing bands 4 2 3 3

3 Ease of recalling and setting memories 4 1 2 1

3 Ease of direct entry of frequency (VFO) 4 2 3 3

3 PL tone stored with memory channel 4 4 4 4

2 Automatic determination of repeater 4 ? 4 ?
splits with frequency

3 Ease of going simplex 3 2 3 2

1 Back-lit keys and functions 3 2 1 4

1 Head set and mike

2 Ease of power output change. 3 3 4 4

3 General ease of control use. 3 1 3 2

1 Dual in-band recieve (listen to 2 2m 0 4 0 4
channels or 2 440M channels at once.)

1 Auto-mute of un-selected band 0 4 0 0

2 Built in diplexer 4 4 4 0

Score: 87 64 75 65

Hope this is of some use..

I just went for the Standard 5718. I really like it; especially the way that you can control the entire rig from the display mic. When parking on the street, I just put the mic under the seat with the radio and no one know's it's there (besides the antenna on the car). The expanded receive is the widest on the market and the thing is packed with features.

[3]
Hi David. I have two Yaesus mobile dual banders, an older FT-4700 and a newer FT-5200, both in current service. I choose them both for the remote mount capability of the front panel. It is the only way to get both bands neatly installed in a modern auto with a center console. It allows for a real slick installation. Both rdios have been flawless. The 4700 is mores than 4 years old. The 5200 is about 18 mos old.

I have heard that the Alinco radios are very subject to intermod interference. I can tell you that the Yaesus that I own are not immune either when in high RF areas such as NYC. Some of the dual banders need an external duplexer if you plan to use a single dual band antenna. That costs about $50. The 4700 needs one, the 5200 has it built in. There are pros and cons to both scenarios. If you wish to run an amp on only one band, the external duplexer allows you to do that in only one bands feedline. If inetersted in that, be sure to get a duplexer and antenna of suitable power. There are some dual band amps, but mostly lower power than I usually use. I prefer the Diamond line of mobile antennas.

Good luck,

Tom

[4]
I have Kenwood TM742. I bought it because I already own a Kenwood TH78A. Also, a bunch of my friends also have Kenwood; that makes it easier to learn from each other.

In general, I like the radio. There is no particular point I dislike about it. I live in L.A. Intermod is generally not a serial problem for me, may be I am not in the most series area. When I do experience intermod it is generally in the 440 MHz band.

One nice feature about TM742 is that you can add a third band, such as 220 MHz, 50 MHz, or 1.2 GHz.

David,

I will tell you about which radio to purchase but please send me all you comments because I am also interested on what others have said.

Personally I would purchase the Yaseu FT 530. The Kenwood TH series has great audio and features however it is a bit finnicky and not very robust and Kenwood is very expensive to repair. The Icom W21A has lousy audio but a very capable rig. Good receive capabilities form about 100MHz to 900MHz.

The Alinco is also not a bad piece of gear however the current models do not seem to be put together as well as the others.

Regards,

Len Spain

Subject: Re: Tell me about your mobile dual purchase...I'm looking

David,

I'm using a Kenwood TM-731A. I've only had one problem with it that I hope is cured. If I needed another mobile rig I would consider another Kenwood. If you need a Duplexer I recommend a Larsen. If you purchase a duplexer, especially a Genisys, I would check it against it's performance specs.

If you're thinking of using DSQ encoding/decoding check to see if any repeater you might be using will pass the DTMF tones. The ones around Kansas City often do not. The repeaters I worked on decoded the DTMF,filtered it out, regenerated it cleanly to the phone lines, then kept it from being re-transmitted. Not only did this give more reliable switching, it keeps those monitoring from decoding DTMF phone numbers.

Good Hunting,

Curtis, I agree that direct FCC enforcement has been lax, but when
illegally modified radio equipment is found, it is impounded. It happens
with very little public fanfare, just like all the money/cars/homes that
are impounded as a result of drug busts, etc. In fact , US Coast Guard
(Great Lakes-9th District) impounds radios found during routine inspections
if the boat owner cannot also produce a valid FCC license for same. It's
illegal for boats over a certain size to be on the water without a radio,
but you must have both a legal radio and a license.

>
> Where does it say that it is illegal to have a modified radio that is capable

> for our gear (except certain external amps) as long as you don't stray from
> authorized freqs. So what do you mean when you say "illegally programed to
> operate out of band"?

The FCC Rules, Parts 2 and 15, since you asked! Although there is no type
acceptance requirement for home-built amateur equipment, if the radio is
imported into the US, there IS a requirement for FCC approval. And the FCC
prohibits the manufacture, importation, and sale of equipment which is
capable of being operated in the Part 90 public safety / commercial /
business band unless it is type-accepted. One of the restrictions is that
the operator cannot adjust the frequency externally, except to preset
frequencies using a channel selector switch. This automatically eliminates
any radio that can be programmed by the user from a front panel keypad,
including the generic Yaecomwood 2M HT.

>
> There are legitimate reasons for having out of band transmit capability. I
> have used my transceivers overseas where FCC type acceptance is worthless.
>

We are referring specifically to 2M HTs, not to HF rigs operating below 30 MHz. I would assume that you also verified that the rig you used was legal and acceptable under the regulations of the countries from which you operated. As long as you don't leave the out-of-band features enabled when you return to the USA you're OK. When you come back in through customs, they can legally impound your HT and fine and jail you for bringing in a radio that is illegal to possess or sell under the FCC rules.

Obituary
William Sydney Arnold
died 29th April 1995

Bill Arnold was born in Katoomba on 11th April 1915 and spent all his childhood and schooldays there. He was always interested in radio, sound and communication, playing around with crystals and cat's whiskers from an early age.

He started work on projection and sound at the Katoomba Picture Show in 1931 and then moved to Sydney to attend the Marconi School of Wireless, graduating in 1934. During the time of the course he worked in various radio factories around the city. After graduating, he spent 10 months on ships and trawlers working in radio, then went to the Fly River area of Papua New Guinea with Papua Oil Development Co where he was in charge of (pedal) radio communications. The tales of his exploits at Lake Murray in the company of such people as Jack Hides are legendary.

Back in Australia, he spent some time with 2KA as a technician and then worked with 2KM in Kempsey. It was here that he married Mary Chapman from Griffith on 3rd May 1941. They returned to Sydney where Bill started at 2UW for a short while before joining the Navy. He spent the war years installing and commissioning radar in ships as a CPO and demobbed in 1946. Bill always maintained that the lack of intelligence in his kids was due to his time spent before live radar dishes, with metal buttons and buckles crackling as proof it was switched on!

After the Navy he came back to 2UW where he started as a panel operator with the "Lux Show" and the "Harry Dearth Playhouse". In 1948 he was at the Homebush transmitter and in 1952 he moved back to the studios as Assistant Chief Engineer where he became Chief Engineer in 1966. He held this position until his "retirement" in 1977. Bill and Mary bought a farm near Tumbarumba and proceeded to relax while raising cattle and sheep.

The other part of his life revolved around his ham. After PNG and the Navy, he built himself a power supply and transmitter and went on the air as VK2AWL on 24th September 1948 and his first contact was with VK2AKW and VK2SB. Since then he has been almost continuously on the air except for barely tolerated interruptions such as breakdowns, moving house, holidays and the like. He

recently bought a mobile and installed it in his car to reduce such annoyances. His stack of QSLs and his log books testify to his interest in and love for his hobby. He tried golf, fishing and skiing but always ended up back in his shack. More so in later years when problems with his knee, that several replacements could not fix, reduced his mobility around the farm. Recently, after up-grading to a yagi, he re-established contact with hams he had not worked for some time, and fell in with the "Montoro net". Even the cows could wait to be fed until he finished with his Montoro sked.

Many of his friends on the air would drop in and stay at the farm for a day or two and when Mary passed away in July 1994, Bill drove as far as Queensland to renew acquaintances, working the bands all the way.

Until his health problems he was active in the Returned Services League, his Masonic Lodge and localcommunity activities.

Bill and Mary are survived by their son and four daughters, and thirteen grandchildren.

Vale Victor Kilo 2 Absent With Leave

Item was inserted by his son who is studying for his licence so that the call will remain in the family.

Divisional elections

DIVISIONAL ELECTIONS

By now, all members should have received their May 1995 issue of Amateur Radio magazine. As an insert in the magazine, for VK2 members, was a copy of the court ruling to enabled the Annual General Meeting and election of a new council to go ahead. The insert also contained a council nomination form, for any prospective candidates.

Unfortunately, some members (including myself), missed out on this insert. If you missed out on receiving the insert, and would like a copy, then please telephone me today (Sunday 14th May) up until 9:00pm and I will get one in the mail to you either today or tomorrow. My home telephone number is (02) 584-3236. This telephone number will be repeated at the end of the broadcast to give you time to get a pen if you need one.

Nominations for the election close this coming Saturday 20th May 1995 at 2:00pm. The nominations can be posted to P.O. Box 1066 Parramatta N.S.W. 2124. Alternately, the Divisional office at 109 Wigram Street will be open from 12:00 noon until 2:00pm on Saturday 20th May 1995, for nominations to be lodged. This is also a good opportunity to purchase any books and morse tapes you might want, or to

consult the divisional library.

Peter O'Connell VK2EMU
Divisional Returning Officer
14th May 1995.

Intruder Watch Coordinator

Intruder Watch Coordinator

The Wireless Institute (NSW Division) requires an intruder Watch Coordinator on a voluntary basis.

If anyone is interested, please ring head office on 689-2417.

from Peter VK2CPK
Office administrator

WIA examinations

WIA examinations

The next examination at Amateur Radio House is next Sunday 21st May, commencing at 1pm. Candidates are reminded they should be at Parramatta at 12 noon.

For those of you who missed out this time, the next exam date is 2nd July and applications close on 22nd June.

Pixie Chapple VK2KPC
Divisional Secretary & Education Officer

Repeater callsigns change

Change of repeater callsigns

Please note that the following repeater callsigns have been changed:-

Packet repeaters:-

VK2RPS now VK2RHR Rose Node on 144.925 MHz
VK2RPS-1 now VK2RHR-1 Rose digipeater on 144.925 MHz
VK2RPS-3 now VK2RHR-3 Netrom Node on 147.575 MHz

Voice repeater:-

VK2RTK now VK2RHR on 438.025 MHz

Note:- The VHF voice repeater on 146.825 MHz remains unchanged VK2RHR.

All the above rpeaters are located on High Range about 20km west of Mittagong NSW.

from the Southern Highlands Amateur Radio Society

VK2 WICEN News

VK2 WICEN News

There have been a couple of changes to the WICEN calendar; the June Management Committee meeting has moved to the 17th, due to the long weekend, and the Annual General Meeting has been tentatively rescheduled to 30th July, to avoid the school holidays.

The WICEN BBS is currently off line, and it will soon return to service on a number to be announced; we thank the users of this system for their patience.

Those members who have not yet renewed must do so by 30th June, if they wish to remain a member. For just $10 (plus a joining fee) you can be a member of the only Amateur Radio organisation accredited by the State Government to take part in a disaster situation.

Next week is the annual Wyong 2GO Rally. This event is the most significant rally on the Central Coast during the competition year, and it will be held in an area of the Watagan Mountains to the west of Wyong. The event will be conducted through a controlled network of base and field stations, and there will be a need for about twenty operators on each day of the event, for about six hours on each checkpoint. The event starts at 0930 Saturday and will finish around 2245, and on Sunday it is 0700 to 1710; access to and from each checkpoint is no problem for normal vehicles. For further information, please contact either Andy VK2XRX or David VK2UDT.

The Hunter region have a meeting on Monday, and Pauline VK2GTB can be contacted for further details; the Variety Club of Australia Newcastle Bash is on 23rd-26th May, with Maurie VK2CD in charge; and the closing date for the Annual Reports is 31st May. WICEN Members who are also members of the WIA (and if not, you ought to be) may be interested to know that their AGM will be on 1st July; Council nominations for same close next Saturday, at 2pm.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

News briefs

HUBBLE TELESCOPE VISIBLE PASS(ES) FROM SYDNEY

BASED ON KEPS DAY 127, 1995
12 May, 1995 10:00z

The HUBBLE SPACE TELESCOPE will be visible (WX permitting) over Sydney in the next few days. The Hubble is not as bright as MIR, but is quite obvious as it travels from west to east in the northern sky.

The Hubble's passes vary little over the next few days. As such, I am giving the times for Monday 15th May only. Take note of these, as the changes over the following days are uniform, and I shall simply give the daily changes.

The times (with bearings) given are when the Hubble will rise above the horizon in the west, its highest elevation over Sydney, and when it falls into the earth's shadow of the sun (when it will simply disappear in seconds).

Times given are UTC.

Monday 15 May
TIME BEARING ELEVATION
(Event) (U.T.C) (degrees) (degrees above horizon)
RISE 08:01 300 0
(Highest) 08:07 010 31
Shadow 08:38 067 16

Each day later, the Hubble will rise approximately 8 MINUTES LATER, from a bearing of about 5 degrees less. The best days will be when it is at it's highest point in the sky - on Wednesday and Thursday (about 42 degrees elevation). After that, it be lower in the northern sky.

By the way - At this stage, the planned docking of the Space Shuttle with MIR in mid-June does not seem as if it will be visible our way. If a change is made in MIR's orbit such that it may be visible, I'll be pleased to let you know.

Regards,
Robin - VK2VN @ VK2OP

FEDERAL BUDGET--REVENUE FROM SMA

The following, which appeared recently on the Internet, is an extract from the 1995/6 Federal budget documents - from Statement 4 - Revenue Measures.

REVENUE MEASURES ANNOUNCED IN THE BUDGET

Spectrum Management Agency
A market-based approach to spectrum management will be introduced

through a new licensing regime. Under the new regime, which will be introduced progressively from 1995-96, licensees will be granted a form of property right over the spectrum for periods of up to 10 years. The new regime is expected to contribute significantly to more efficient use of the radio frequency spectrum by allowing trade in spectrum access, which will result in greater flexibility and more immediate availability of the spectrum for alternative users.

New resources are to be dedicated to investigating complaints and where necessary the enforcement of compliance, to resolve disputes relating to broadcasting reception interference or alleged breaches of broadcasters' licence conditions. Regulation will commence during 1995-96 and, as it provides a benefit to all users of the radio frequency spectrum, the costs will be incorporated into the 1995-96 cost base on which annual licence fees already paid by those users are derived.

****

AMATEUR OPERATIONS IN OKLAHOMA COMPLETE

[Here is the final report from the ARRL, of the Amateur Radio support operation in Oklahoma. Add it to your "Amateur Radio in the Community" file.]

The primary Amateur Radio operation in support of recovery efforts in the bombing of the federal building in Oklahoma City ended at 4pm on Tuesday, May 2.

Amateurs had maintained a network continuously since 9:15am on April 19, with more than 300 operators from Oklahoma, Kansas and Texas providing communication through the Oklahoma City Autopatch Association repeater.

Amateur operation then shifted from the blast site to coordinating Salvation Army activities, on a simplex frequency. As of 4 PM on May 4, Amateur Radio operators in Oklahoma City had conducted emergency communication for more than 360 hours.

ARRL Public Information Coordinator Tom Webb, WA9AFM, said that those involved in the post-bombing communication effort credited numerous disaster drills, established Amateur Radio networks, emphasis on proper on-air procedures, and experience in weather spotting nets for the success of this operation.

Later this month, Oklahoma City amateurs will meet to discuss their activities and for a debriefing.

SOLAR ACRIVIRY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS UNSETTLED TO ACTIVE WITH A SHORT MINOR STORM PERIOD ON 5TH MAY, QUIET TO UNSETTLED WITH ACTIVE TO MINOR STORM PERIODS ON 6TH, AND UNSETTLED TO ACTIVE ON 7TH AND 8TH, THE FIELD WAS QUIET TO UNSETTLED ON 9TH, AND QUIET 10TH TO 11TH.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE MOSTLY NEAR PREDICTED MONTHLY VALUES. ON THE 6TH AND 7TH FREQUENCIES WERE ABOUT 15 PER CENT BELOW PREDICTED MONTHLY VALUES, RETURNING TO NEAR NORMAL DURING NIGHT ON 7TH. STRONG SPREAD F WAS PRESENT DURING LOCAL NIGHT ON 5TH, AND SPORADIC E WAS OBSERVED AT TIMES

ON THE 11TH.

FORECAST (12 MAY - 18 MAY)

SOLAR: VERY LOW TO LOW.

GEOMAGNETIC: MOSTLY QUIET.

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES.

IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Veterans Group

The Veteran Group will be meeting on Thursday next. May 18th, at Amateur Radio House from 11.00 am to 2.00 pm. Any amateur interesting in tslking about old times is welcome. Bring lunch, te or coffee available.

73
Franklyn VK2DYP

Club news: AATC

Australian Amateur television Club

The next meeting of the A.A.T.C. Inc be on the 3rd Sunday of this month - May 21st - and it is to be held at 10 Manus Place - Glenfield promptly at 1.00 pm. Note this is the week after Mothers Day.

Notice to all members: AGM countdown, weeks away, nominations please.

AATC Inc. Publicity Officer Bob Barnes

Club news: St George

St. George Amateur Radio Society

The Society held its Annual General Meeting in the 1st Allawah Scout Hall at South Hurstville on Wednesday evening the 3rd of May 1995.

The meeting was well attended and it was pleasing to see such a large roll up to thank the outgoing office bearers and participate in the election of, and congratulations to, the incoming Executive Committee for the ensuing 12 months.

Those were:

President ..... Paul Smith VK2ZSA
Vice-President ..... Stewart McCarthy VK2MX
Secretary ..... Ian Horne VK2XSB

Treasurer ..... Phill Higgerson VK2OX
Committeeman ..... Steve Harpley VK2YUK
Committeeman ..... John Hans VK2JH
Publicity Officer ..... Allan Burt VK2XF

The next general meeting of the Society will be held at the usual venue, that is on the 1st Allawah Scout Hall, corner of Bellevue Pde and Blakesley Rd. South Hurstville at 7.30pm next month on Wednesday the 7th of June.

Visitors are always welcome to club meetings and the members look forward to meeting those interested in attending.

from Allan VK2XF Publicity Officer

Club news: VHF to SHF DX Group

From the VHF to UHF DX Interest Group

Just a reminder that the next meeting of the Group is on the third Tuesday of May (i.e. 16th starting time 7:30pm) at the usual venue, which is WIA offices Wigram St.

We will be checking out the pre-amplifiers we have all built and also discussing the next project which is the controlling of transceiver / amplifier / pre-amplifier / aerial switching (this particular topic doesn't necessarily apply to VHF/SHF operation.

Please note that the SSB activity night which is still being held every Tuesday evening 20:00 to whatever, it is well patronised but the group is always happy to see new stations so lets see you there and join in the fun.

Richard Soulie VK2ARS Publicity Co-ordinator

Club news: Oxley Group

The Oxley Region Amateur Radio Club will NOT be holding its annual Field Day over the Queens Birthday weekend in June this year.

However, listeners in the area may be interested to know that Kempsey Amateur Radio Club are proposing to hold a Boot Sale and Trade Displey complete with a Sausage Sizzle and BBQ, at the Guide Hall in Verge Street. This is planned for Saturday June 10 and commences at 9 a.m.

Their local voice repeater is VK2RMC on 146.875 mHz and Oxley Region repeater on 146.7 mHz. VK2RPM also covers the area.

The Oxley Region Amateur Radio Club meets every 1st and 3rd Friday of each month at the S.E.S. Building in Gordon Street at 7.30 pm. They also have an on-air visitors net every Sunday morning at 08.00 0n 146.7 mHz as well as a HF net on 3597.5 kHz every Wednesday evening at 20.00 hrs.

from David Pilley VK2AYD
Secretary

Club news: Waverley

Waverley Amateur Radio Society

The next meeting of the Society will be on Wednesday, 17th May at 7:30 pm at the club house in Vickery Avenue, Rose Bay, next door to the RSL. Doors open at 7:00 pm.

The speaker for the evening will be George Georgevits, VK2KGG, a professional electronics engineer, who will give a presentation on "The design and use of filters in amateur radio". The talk will be aimed at all levels of technical expertise, so bring along your filter problems.

Other functions planned in the near future include a car boot sale on Sunday, June 25th and a 75th anniversary dinner in August.

In addition don't forget that the first Friday evening of each month is Project Night when you can bring along your technical problems to discuss with other members.

Submitted by Simon Buxton VK2EII Publicity Officer

Club news: Central Coast

The next meeting of the Central Coast Amateur Radio Club will be a Lecture Night to be held next Friday 19th May. The Lecture will discuss Data Radio Communication products and will be jointly conducted by representatives from Telecom Australia and Motorola. The meeting will be held in the Club Rooms, Dandaloo Street, Kariong, commencing at 8.00 p.m.

The next business meeting of the Club will be on Friday 2nd June, 1995, commencing at 8.00 p.m., at the Club Rooms, Dabdaloo Street, Kariong.

from John Pogson (for Bob Fitzgerald, VK2XRF CCARC Publicity Officer)

Club news: AAPRA

Australian Amateur Packet Radio Association

The Association has provided equipment for the establishment of and extension of packet networks, principally for the benefit of country packet users. However our main objective was and is to extend the use of the packet mode for Amateurs anywhere.

The prospective change in the Amateur Regulations will mean that many more amateurs will be able to use the packet mode. At the same time new communication systems and protocols are becoming available for existing packeteers.

AAPRA can probably help with information and advice - or tell you
where to get it. So present and prospective users are invited to
contact AAPRA at :-
59 Westbrook Ave
WAHROONGA NSW 2076 Ph (02) 489-4393

You don't have to join the Association, but it could be a good
idea and would enable you to keep up to date by reading our
newsletter DIGIPEAT.

de Geoff VK2BQ Publicity Officer

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 858 14th May 1995

What comes next? Part 2 (from the Digital Journal May 1995)

This second and last part of the feature article in the Digital Journal covers 4 topics - the network, public service, antennas and environment.

The first topic starts with a worrying statistic. Each day, in the US, 17,000 brand new phone numbers are created, two thirds of them cellular. This means that - quote - every fifty days there are more new mobile wireless stations created in this country than there are licensed U.S. amateurs; every year six to eight times as many - end quote. Cellular gives the ordinary consumer the freedom of communication with anyone, anywhere at any time. Thats what amateur radio is about, but those people do not have to know how to do it, they just pay others for the privilege. Wonder what the figures are like in Australia?

The article then goes on to talk about packet networks, but how much of the messages are read? One estimate is 70 per cent not being read, with a quote of 6500 messages per month going through BBSs in America. One amateur with a future view wants to set up linked terrestrial gateways designed to integrate with future fixed satellites with 1.2GHz on the uplink and 2.4GHz downlink. Be interesting to see if that eventuates.

Public service in the US includes plans for allowing the general public access to amateur radio for the passing of messages. But, of course, that is only intended to keep the amateurs ready for emergency traffic during disasters (which seem to be hapeening more frequently with the global warmup). Many amateurs are now using digital modes for emergency work, witness our own WICEN which does the same, with the benefit of instant copy if needed.

Antennas are also discussed briefly, especially those which can be installed within roofs.

The environment topic is mostly about the changes in digital equipment and software programmes which now even allow the transission of colour images using Clover. it is not TV, FAX or SSTV emission - it is a digital RTTY emission. How about

that. Back to the simpler modes - they take up less bandwidth, also the modern mode is up to 100 times faster than the old, using compression techniques.

If you lay your hands on this article which ran over two issues, it is well worth the read. I have hardly touched on the discussion.

I will close this item with a quote from near the end of the article...

We have -- been over to the future -- and it will no doubt work. Our collective vision is, we trust, better than that of Henry Ford II who, in 1957 said, -- The Edsel is here to stay --. Or, the manager of the Grand Ole Opry who told Elvis, -- You aint goin nowhere, son--.

Only time will tell. But even if our group forecast is wide of the mark in some respects we do know one thing for sure. Whatever is going to happen will happen at unprecedented speed. In the commercial world there will be serious economic casualties. Fortunately for us, we have nothing more at stake than our ego, the accelerated obsolescence of our equipment...and our privileges on the radio spectrum.

So be it.

Something to think on...

Just a reminder -- the ANARTS Worldwide RTTY Digital contest is coming up in a few weeks. Polish up that antenna, tighten the guys, check all equipment -- we want a good showing from the VKs.

Rules start running next week, be watching.

IPS WEEKLY REPORT

IPS RADIO AND SPACE SERVICES

UNFORTUNATELY, WE HAVE BEEN UNALBLE TO LOCATE THE RTTY DX NEWS FOR THIS WEEK, AND HAVE HAD NO LUCK WITH THE ARRL DX NEWS EITHER. BUT HERE IS WHAT WE HAVE FOUND AND I HOPE YOU FIND IT SATISFACTORY. ED.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 205
May 8, 1995

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, KC1QF, K6OZL, AA8SM, N8AC, WD8E, N4AA & QRZ DX, DF4RD, DK8KW, DL8OBC, F8RU, G0OYQ, ON6TT and Japan DX News for the following DX information.

1P0, Seborga. Geri, DK8KW, states he will be active as 1P0P between May 26-29th, with participation in the CQ WW WPX CW Contest (May 27-28). For those who do not know, the Principality of Seborga (520 inhabitants) is situated in the Alps near the Italian town San Remo. During the contest, look for Geri around 1831, 3522, 7022, 14022, 21022 and 28022 kHz. Before and after the contest he plan to operate mainly on CW, the WARC bands, 160 meters and also on 6 meters depending on the conditions.

7Q, MALAWI. Peter, ON6TT, has taken up a one month contract as telecom consultant for the Red Cross in Malawi starting May 11th. He states he still holds a valid license under the call 7Q7XT. Peter states this will be a low profile operation, as for once, Tine and Lana (family) will be coming along with him

and he will be spending most of his free time with them. He will have antennas for 10 to 40 meters, including a 5 element yagi that will be fixed towards Europe for 10-15-20 meters. He will be taking RTTY equipment with him. QSL via ON5NT.

9Q, ZAIRE. Alex, PA3DZN (9X5EE), who is with UNHCR telecom crew in Goma, Zaire, will be active soon after his return from the Dayton Hamvention. Alex will be there for about one year and plans to be active on 80 and 160 meters. His callsign is unknown at this time, but we will keep you updated. QSL via PA3DLM.

9X, RWANDA. Mark, ON4WW, (who is also a member of the UNHCR is replacing Alex, 9X5EE, in Kigali), is now signing 9X/ON4WW. He has put up two inverted L's, one for 160 and one for 80 meters. Mark runs barefoot mainly on CW. For the moment, his low band schedule is: 2015z on 3513 kHz, and 2030z on 1830 kHz for Europe and 0030z on 1827 kHz for US. Meanwhile, he has also been heard on 20 meters CW around 14020 kHz starting about 1845z. Mark will be there until end June. QSL via ON5NT.

CHINESE'S DX CONVENTION. Chen, BZ1HAM (one of the operators/leader of the BS7H operation), announced during the DX Dinner Banquet and the DX Forum that the People's Republic of China will have their first DX Convention October 13-16th (1995). A special station, BT1DX, will be active during the convention. Visitors attending the convention will be availble to operate from this station. Also, a possibility of obtaining a BY license may be available for individuals who attend the convention.

EJ, THE ISLAND OF INISHMAN (Rep. of Ireland). This is just a reminder that a group will be active next weekend from this island from May 13-19th. Inishman is part of the Aran Island group which is off the west coast of Ireland and has IOTA reference number of EU-006. The group will be signing EJ/homecall, so look for G0OYQ, G0PHN, and G0ULN. They will be active on all HF bands and the usual IOTA frequencies. QSL via the bureau or direct to: CHB ARG., PO Box 803, Hull, HU7 4BY, England.

GAZA. The Japan DX News reports that JA1UT will be active soon as JA1UT/GAZA. From May 14-18th, seven Japanese operators are going to The Gaza strip under a United Nations aid program. They will take the opportunity to operate SSTV, 10 meters FM, as well as the usual operating modes.

OY, FAEROE ISLAND. Claus, DK9FE, will once again be active as OY/DK9FE from Kollafjoerdur, Faeroe Is. (IOTA EU-018). He will be operate mainly CW from July 10-27th. Using a vertical antenna, look for him on all bands (80-10 meters) including WARC and 15 kHz above the lower band edge. QSLs cards are to

be sent to his callbook address.

SV/A, MOUNT ATHOS. Peter, KC1QF/SV0GV/EI4GV, together with Andreas, SV1BKN, will operate from Mount Athos using the callsign SV0GV/3 from July 6-9th. The operation will take place near the peak of the Mount Athos mountain, at the 1700 meter point. Operation will be both SSB and CW on the 10/15/20/40/80 meter bands. If time permits, RTTY and AMTOR will also be added. PLEASE NOTE that this operation will feature special split frequency on a per-region basis.

3095. Re: Dumbing down?! How could it get any dumber?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-16 00:00:00 UTC
From: cliff@pgh.nauticom.net
Message-ID: <D8nEy0.5G9@pgh.nauticom.net>
Source record: 246233
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

As the trustee of a local repeater I have the dis/pleasure of
regularly montoring it. Here are a couple of my random
thoughts:

1. Don't ragchew on the repeater.
This comment is made by the person who doesn't have the nerve
to break into a conversation to make a call/use the autopatch/etc.

2. The repeater doesn't get used enough.
This comment is made by the person in #1

3. Sandbagging
When I leave work, I usually throw out my call on the repeater...
"This is K3LL". Approximately 15 seconds later someone will call
"This is W3UDX monitoring". They heard me the first time, but
want me to call them. Sorry. I don't talk to sandbaggers.

4. Another ragchew comment: Folks seem real concerned about
ragchewing on the repeater and want to move to simplex, but as
pointed out previously, how can any kind of discussion get started
in which others may want to join in or listen to.

5. The person who really needs something, but only signs their call
with "listening". Then they call repeatedly. How about "Can
anyone give me a signal report?". Of course when you see them
at a hamfest they complain bitterly that nobody monitors the
repeater.

6. Someone came up to me at a club meeting a said nobody monitors
the repeater... in fact "I heard them call several times and
nobody came back to them".

7. Then there's the old standby: "I can barely understand you, but
you're pegging the needle".

All for now, so little time...
73,
Cliff K3LL

Field Day is always the last full weekend in June. Both Sat and Sunday have to be in June......this year I think the dates are 24 and 25.

Good news, Jim. They don't do that anymore. Now all they do is put your name and address in (if you want to give it, the local stores don't object if you don't) for the simple purpose of mailing their sales flyers. No harm in that. The only thing the phone number suffixes was used for was to bring up customers' names for the mailing list - it wasn't used for anything else. I never thought it was a big deal anyway.

While we're on the subject, I'm very amused at reading all the "flames" at RS, especially the ones concerning their prices/markups/etc. C'mon guys - they aren't doing anything that isn't standard practice in retail. Keep in mind how much it costs to actually run a business these days and you'll see that their markups aren't out of line. As far as quality goesI haven't yet found *any* product line where each and every example produced was perfect. RS has their good stuff and their crap, just like everyone else. Reminds me of the 1985 Chevy I had (bought new) that, with less than 1000 miles on it, developed an electrical problem. The tailight fuse kept blowing, and I usually didn't know about it until the police would pull me over at night for having no rear lights. The dealership's fix? The idiot mechanic, instead of trying to find the problem, put in a 30-amp fuse instead of the 15-amp that was called for! When I found that, I raised hell then called their zone office. The point is, nobody is perfect and I think some of you expect entirely too much. Use some of the electronics knowledge that you supposedly have instead of just complaining all the time. When RS learns how to pay their people, they'll get some more competent help and all of you will have to find something else to complain about.

Bottom line: the product line, with a *few* exceptions, is good. Most of the time, the staff isn't. In this case, it's *Tandy* that's getting what it's paying for - minimum competence for a minimal wage.

Yes, I own some RS products (including the HTX-212 - nice rig, BTW). Mine have all performed well and I'm satisfied with them.

Yep, been there, done that. I can match each of your stories with
several more. It was fun, but only up to a point.
I worked hard at RS, did make more money than most of their people,
and I treated the customers right and didn't BS them.
The root cause of RS's problem is that they don't want to pay the
prevailing wages for good, knowledgeable people. The expression
"you get what you pay for" applies both ways.

>wb9omc

Hi Duane,

Having lots of experience with RS, I can say I agree totally with you. Biggest problem is that RS doesn't want to pay what it takes to get knowledgeable, good people. They also abuse their managers like crazy, which is why they have such a turnover. Most of theiray and personnel policies are very short-sighted. Tandy has yet to learn that the phrase "you get what you pay for" works both ways.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 16/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 16 MAY AND FORECAST FOR 17 MAY - 19 MAY

1A. SOLAR SUMMARY
Activity: Low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 94/40

GOES satellite data for 15 May
Daily Proton Fluence >1 MeV: 2.5E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 4.9E+07 (normal)
X-ray background: A9.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
17 May 18 May 19 May
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 17 May: 95/41

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled until 09UT, minor storm
levels 09-12UT, active 12-21UT then unsettled.

Estimated Indices : A K Observed A Index 15 May
Learmonth 23 3335 4443
Fredericksburg 28 5
Planetary 30 5

Observed Kp for 15 May: 2211 1222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
17 May 20 Mostly unsettled, active conditions may occur
particularly during night hours.
18 May 10 Quiet to unsettled
19 May 12 Quiet to unsettled with isolated active periods
possible.
COMMENT: Activity is not due to any recurrent structure on the Sun.
However over the past four days, numerous low levels flares have

occurred which may have caused this disturbance.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
16 May normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
17 May normal fair-normal fair
18 May normal normal fair
19 May normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
16 May 44 Near predicted monthly values with 50% enhancements
from 08-18UT.

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
17 May 20 Near predicted monthly values to 20% enhanced. Spread
F may degrade night communications.
18 May 20 Near predicted monthly values to 20% enhanced.
19 May 20 Near predicted monthly values to 20% enhanced.
COMMENT: MUFs at Townsville were near predicted monthly values. MUFs
at Hobart were near predicted monthly values with 50% enhancements
during night hours.

But is there a need for any more of them? SoCal is blanketed many times
over with 2M repeaters. What can a hopeful new owner offer that doesn't
already exist? One begins to believe that with no real justification
to install a new machine the reason for doing so might lie with wanting
to hear one's own callsign on the ID.

The real answer is for the ARRL to press the FCC for substantial changes to PRB-1 that would make expensive and time consuming court cases unnecessary.

As currently written, PRB-1 is extremely vague and unenforceable. The FCC has the power to change PRB-1.

If you would like to see an example of just how worthless PRB-1 can be in the hands of misguided Federal Appeals Court judges, send me e-mail for the text of "Evans (NQ0I) vs. Boulder County". This was a devastating loss for all U.S. hams, after a 7 year battle.

>

The word "conspiracy" is your word, not mine.

As far as what I object to about 440 coordination: basically the fact that the band is almost entirely coordinated for the benefit of a few. There are very very few open repeaters there for the use of the casual user who doesn't belong to this or that club. The contrast with 2M is stark. 440 in So Cal is a dead band, used mainly by old farts who have rigged the coordination for the benefit of the few rather than the many. Maybe this was OK in the 70s when the hobby was dying, and there were few hams without grey hairs. In the 90s, when we are finally experiencing healthy growth, the situation on 440 is completely inappropriate, and downright unwholesome.

With respect to the argument that "hey, they own the repeaters, they should be able to do what they want." Hogwash. The bottleneck isn't with respect to the numbers of hams who will construct and support a repeater, it is the number of frequency pairs. 2M is proof of this.

Personally, I don't give SCRBBA many more years. With the FCC's disinterest in ham radio, anyone can put up a repeater, especially on one of the plethora of mainly disused pairs, and SCRBBA won't be able to do much about it. There won't be any interference anyway, since it should be no trick to find a "paper pair" or a pair used just by bubba and the fam damily.

My $.02.

>
> Walt / KF0OS

Walt, you got it right, and the amateur community is partly to blame for
the problem. I'm quite sure there are numerous volunteer fire and rescue
groups with ham members who have illegally modifed amateur HTs to operate
in both bands. These are the folks who get hurt the most by illegal
operators and operations, because they can't afford to lose their station
license. However, with new (legal) equipment at today's prices, they can't
use finances as an excuse for not being in compliance with the rules.

Things get far worse if by chance the modified non-TA'd radio creates some
interference on other frequencies in other radio services. For example, if

you drop a spur on 156.800 (the marine safety channel 16) and the Coast Guard comes looking for you, the station licensee is liable for the entire costs of the search, just as if it was a false distress call! Since 156.800 - 10.7 = 146.100, watch out for the 146.10/70 repeater in your area. If you happen to be heard by the local PD instead, you can predict their reaction when they find the offending transmitter. Or if you really want to tangle with the Feds, guess which agencies you might clobber with a spur at 21.4 or 21.6 MHz above a legit amateur transmit frequency.

Ah, no. It would be price fixing if a group of dealers mutually decided to sell an item for the same price or the manufacturer refused to supply the product unless it retailed for a certain price. If the same group of dealers pools their funds to take out an ad for a product and listed only the MSRP, that's not price fixing either.

So if a manufacturer wants to underwrite advertising for one of its dealers and makes it contingent on the content of the ad, what's the big deal?

3113. Q: Jacket quality of RG-8U's

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-16 00:00:00 UTC
From: CC015012@brownvm.brown.edu
Message-ID: <3pabqc$r6u@cocoa.brown.edu>
Source record: 246395

Hi,

I need to transfer a few amps of DC current underwater (from a
battery pack to a light head) and was
recommended the RG-8U. I have no experience with 50 ohms cables and
in this particular application the AC characteristics are unimportant.

So I am concerned about the quality of the jacket alone. UV protection
is unimporatnt but the jacket must be able to take a bit of flexing,
be (salt) waterproof and I must be able to form a damn good waterproof
pressure seal against the jacket. I assume that means I shouldn't
use a cable with a foamy dielectric. Also I was told the RG-8U is near
perfectly circular which makes the sealing better.

At the swap at Hosstraders this weekend I got several yards of
Manhatten Electric Cable M4201 RG-8A/U E96824-I
for just about free and now I wonder if a friendly soul would
type in just a few words on if I should find a "better" cable to use.

thanks,
john

At NAV (DC), NBL (Groton, CT) and probably all other USN sites, all of us
who are station operators will also remind the amateurs "Do NOT transmit on
this frequency!" whenever we tell you where we are listening. Ed, if you
can swing it, sign on as an AFD guest op for NBL/ASI or NAV - it's a real
trip!

Starting next year the Dayton Hamvention will also run during the Armed
Forces Day weekend. Congress set the timing of Armed Forces Day, and it
won't be changed just to accomodate Dayton. Maybe MARS members and
Rochester, NY hams aren't held in such high regard by the Dayton HamVention
Committee as they wanted us to think!

3116. Q: How to use 99 MHz xtals ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-16 00:00:00 UTC
From: CC015012@brownvm.brown.edu
Message-ID: <3pacmi$ra6@cocoa.brown.edu>
Source record: 246398

Hi,

I have a surplus sourced x-tal, "McCoy 99.066666 MHz". I know nothing
about this x-tal but the price was right. I want to build an FM transmitter
for use on a test-bench. The x-tal has three legs, one goes to the case.
I'm wondering how I go about figuring out the load capacitance to use.
I've used crystalls no higher than 12MHz before and they usually
require a 33pF ceramic between each leg and ground. But I am less
certain this beast for reasons of this possibly being a higher
harmonic x-tal (I know nothing about this) or something else I am
not aware of.

thanks,
John

One point that is often misunderstand when discussing what managers and sales clerks are paid by Radio Shack, or most any retailer for that matter, is that they are not in business to provide good paying jobs. They are in business to produce profits and pay shareholders. They don't want to pay extra for experienced and intelligent 'technical' people. Rather, they want to hire the least expensive individuals they can to open the store in the morning, show customers where the stock is, take the money, and lock up at night. If they can hire someone that knows something about electronics and business at the rates they pay, so much the better for them and the customer but that is *not* their business goal and they don't see that much of an impact on the bottom line by insisting on it. If they wanted the *best* technical minds, they would pay for it.

What they want is volume of sales. There isn't that much volume to helping someone engineer their latest weekend project. That creates warm fuzzies for some customers and they do come back. But by and large this is not where Radio Shack realizes most of the profits. The product line, in combination with the catalog, pretty much sells itself and this is exactly what a smart retail company wants. Payroll is generally the largest expense and that's usually where the bean counters put the most pressure to cut.

If Radio Shack purposely excluded individuals with technical background I guarantee their sales would not suffer much, if at all. I can think of no other major retail chain selling electronics (though not exclusively) that has a reputation for hiring people that know their products. On the other hand if Radio Shack made it policy to hire only people with some sense and technical experience, particularly with the product line, the consumer wouldn't really know the difference and most of the time wouldn't care. R.S. would have to pay higher wages to find and keep those reps and it would either eat into their margin or they would raise the prices and the customers would not shop there as often - probably only when they really needed some technical advice. Otherwise, they're off to Target, Sears, and K-Mart.

I worked as a service manager for an independent consumer electronics retailer many years ago. I observed that the less the customer thought you knew, the more comfortable they were (we're talking the *majority* of customers here, not all). I think it has to do with feelings of inferiority around a 'know-it-all' sales clerk. Granted, a few customers will be angered if you don't have the technical answer they need, but most don't care. There are many customers that like to believe they know more than the clerk (and sometimes they really do know more). There was one guy that walked in with his girlfriend and nonchalantly stated during the ensuing converstation that he was an "electronic". He used the word as a

noun, not an adjective. An electronic *what*, I thought to myself. Obviously the guy fancied himself knowledgeable about anything related to electronics and wanted to impress his girlfriend. I humored him. Hey, the customer is always right. As for "You have questions, we have answers", it's marketing hype. And yes, it works. It's a rather elegant marketing campaign and it gets the consumer's attention. Is it accurate? Hey, com'on, this is advertising!

Gold Wings are great bikes, and they are often equipped with CB sets, but these are mostly for talking to other riders in your group. I've riding and hamming for over 25 years, and I've never been comfortable mixing the two. Safe riding is a full time job, and I find schmoozing on the radio to be way too distracting. I keep an HT in a fairing pocket, and pull over when I need to make a call. Good luck, and safe riding...

>As far as what I object to about 440 coordination: basically the fact that
>the band is almost entirely coordinated for the benefit of a few.

Do you mean for the benefit of few trustees or few users. There's a big difference. If a repeater has many users, it would seem to me there's no difference if that system were open or closed. If there are few users, that's different...

>There are
>very very few open repeaters there for the use of the casual user who
>doesn't belong to this or that club.

So what? The lord didn't put people on this earth to build repeaters for everyone to use. If the owner doesn't want the masses using his station, that's his decision. The question is if the channel is being used or not. If a closed system is active, the channel is being used. If the system is not active, some sharing might be justified.

What I object to is the automatic assumption that open radios are "better" than closed ones. This is total manure. The activity level is what is important, not whether it's open or closed.

> Personally, I don't give SCRBBA many more years. With the FCC's
>disinterest in ham radio, anyone can put up a repeater, especially on one of
>the plethora of mainly disused pairs, and SCRBBA won't be able to do much
>about it.

They can't do ANYTHING about it. Frequency coordination isn't recognized by the FCC and nothing prevents anyone from putting a repeater on any available frequency. I don't agree with this position, but it is the way it is for now.

I am in agreement with Gary on this. The funny part is when I am misunderstood when I use "we" correctly. Since my wife (KI5EV) and one son (N5SVU) share a base station, sometimes I use "we" (as in "we installed a new antenna") correctly. Sad to say, I end up suffering the occaissonal "gotta mouse in your pocket" come-back. BTW, I make it a habit not to bother people on the air when they misuse the language or the prosigns or whatever. If I see them in person sometimes I'll chide gently hoping to improve things. Who knows . . .

Cheers, Ed Humphries N5RCK

This is also my #1 complaint. I continually make known to the saleperson
that I think RS should not ask for customers' name/phone. Apparently they
are *required* to do this or lose their franchise. I wrote to the Tandy
president about this, and he replied but tried to claim that it improved
customer service. Several salespersons have told me they don't like to
do it, and would bring it up at one of their meetings, but until the
policy is changed, they had to obey. If *everyone* complained, maybe
something would change (you can still get on their mailing list by
request).

Rane n8reg

PS. I am happy to buy from RS if I judge I like the product and want to
pay their price. If I don't, I wait for a hamfest!

Cathy,

This coming weekend on May 21, the Annual meeting of the Buckeye Belles will be taking place at the Hilton in Columbus, OH. The Buckeye Belles is made up of female amateur radio operators from the state of Ohio. Last year, the annual meeting was in Cleveland, OH and there were a lot of YLs at the meeting. We can also bring our OMs with us if we choose. :) :) :)

I don't have all the info about the Annual Meeting in front of me but I can get it for you tomorrow and post it on the board. I'm pretty sure about the hotel but I need to check for sure. The deadline for reservation was May 10th but I will include the name of the contact person and if you want to attend the meeting, I would suggest you contact her.

I plan to attend the annual meeting with a friend's daughter who's 10 and who I helped get her no code tech license. This summer I plan to help her get her code privileges and maybe her general license. It also helped that both her parents and her 3 older siblings are also licensed so she was familiar with a lot of the amateur radio terms. ;)

I got interested in amateur radio while dating the guy who's now my husband. He was licensed at the time and told me about amateur radio. I always liked morse code as a kid and had the walkie talkies that you could send morse code with. However, my friend and I tried to learn the code by literally memorizing the words 'dots' and 'dashes' for each letter and eventually gave up on it. So the idea of learning morse code to get a ham license was fun for me. Both my husband and I have an extra class license now but I haven't done much with the code for quite a while. I'm gotten more interested in RTTY, Amtor and Pactor.

73 de kc4iyd, Nancy
nmr1248@mars.lerc.nasa.gov

P.S. Cathy, let me know what frequency you monitor and I will try to give you a call while in the Columbus area. I will be driving down from Cleveland, during the late morning hours of May 20th.

I have an Icom IC24AT dual-bander which (following a mod
done just with keyboard presses) goes from aircraft freqs
(down around 120 MHz, and in AM) up to 800 and something
MHz including cellular, although you must not listen to
that particular band. ;-) Sensitivity varies, being the
best, of course, around 2m and 440. Sensitivity in the
220 MHz band is particularly poor.

I don't know if they still make the 24AT, but they followed
it up with a W-something or other (help me out here, guys!),
and may be on to another model by now.

Anyhow, I suggest you check out the Icom offerings. At the
time I got mine, the IC24AT had about the widest receive
coverage of anything on the market.

73,

Jud

Yes this is a flame. I just posted the info on the Van Wert Hamfest as a
service to my club and you guys. Sorry if I offended anyone else. Here
is my relply to Greg:

I didn't know that a modem had a bandwidth. Thank you. You really didn't have
to download it. I told you it was a .tif before you downloaded it. So please
give me no shit about our hamfest flyer. I don't really give a shit about your
piss ass sized hard drive either. If you can't fit a .tif in it, then get off
the internet. it was only like 76k anyways.

I apologize for the obscenities, but I don't think it was necessary for him
to reply
to my .tif posting. I get really angry when people misuse this system such as
Greg has. He needs to learn some manners. I just posted this as a service,
does anyone else think that was wrong? Maybe if everyone acts like Greg, we can get some
more regulations here on the Internet. I would love that!

3137. Expedition Help Needed

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-16 00:00:00 UTC
From: chriss@mdd.comm.mot.com
Message-ID: <chriss-1605951414010001@dynamac15.mdd.comm.mot.com>
Source record: 246419

I seem to have been delegated as the North American consultant on expedition communications and need some help. Every year an expedition of school age children from the British Schools Exploration Society travel to remote areas. This year they will be traveling to Alaska and their communication equipment sponsor has backed out.

The group needs to establish communication for about 6 weeks between a eight bases sites spread over remote mountainous terrain approximately 300 miles NE of Anchorage. They also need to be able to communicate back to civilization in case of an emergency and ideally would like to connect to the phone network for conversations back to the UK. Cost is a significant constrain - the group only has a few $k to allocate to communication.

Any suggestions on how this network may be established and recommendations of suppliers would be greatly appreciated.

ARLD026 P5 QRV for 1st time

Martti Laine, OH2BH, announced today from Vladivostok, Russia, that the first authorized Amateur Radio operation took place from North Korea on May 14. They signed P5/OH2AM.

The Finnish business delegation, including OH2BC, OH2BH, and OH0XX, experienced difficulties with Russian border guards while trying to enter North Korea (DPRK). The delegation was held for 26 hours waiting clearance. During that time they activated R0/OH0XX from the border region.

Once in the DPRK, they report they were warmly hosted by government and telecom officials. During their 17-hour stay they were part of a series of business activities and their on-the-air time was limited. Some 20 QSO's were made on two occasions (14 MHz SSB and 7 MHz CW).

The group presented four Yaesu HF/VHF transceivers for training purposes, and for actual Amateur Radio activity which is now scheduled for later this year.

The DPRK Telecom delegation will be participating in the first Beijing DX Convention this October. While there, they will observe Amateur Radio in action at BY1PK and will meet with CRSA officials, including IARU Liaison, Mr. Chen Ping, BZ1HAM.

Uh, tune in to your local simplex frequencies?

This is the same logic that people use when running 1500 watts to talk
to someone in the next state. "Well, if people can't hear me, they can't
join in the discussion. I'd better run maximum power."

I imagine Lyndon will post something here eventually, but I wanted to mention that the DX reflector has been automated. After a couple months of trying to get on it, I finally made it!

There is a new address for the reflector - dx@ve7tcp.ampr.org. The old address of dx@unbc.edu also still works for the time being.

Lyndon said that the request sent to dx-request@ve7tcp.ampr.org should contain the text
subscribe [address]
where the address is your e-mail address (leave the brackets off when you type!)

See you there!

Well Ken, people today are still buying up Drake and Heathkit gear. Some people out there will kill to get their hands on various types of Heathkit gear like HW-16s, HW-7, 8 and 9 as long as it is in good condition. You see Drake radios and other American manufactured radios that have been around for 30 to 40 years and still being used, bought, sold and traded. Ever see any old Radio Shack, Allied or Knight Kit equipment at hamfest. A few, but most of it was not of the quality to last as long as people like Drake and Heathkit.

The Radio Shack ham radios are not as good as you claim. Theese Usenet groups are filled with postings are people having this and that problem

with the RS units. What really gets a laugh out of me are the postings that talk about how lucky they were to have bought (been ripped off for) a TSP. The postings go on and on about how they took the radios back five times and always had it replaced, fixed or whatever. What a laugh! If I had a radio that had to be returned that many times, I would return the radio and get my money back. Who wants equipment that is not reliable.

My requests for your company are simple. Bring out interesting products. Something new and innovative. My God, everyone sells a 2 meter rig...big deal. Second, if you have to make it overseas, at least have it built by a company that will build in quality and reliability. Third, offer the product at a fair price with accessories to support the product. Fourth, pay your people fairly and treat them with respect so that you will retain knowledgeable people that can develop relationships and build a loyal customer base. Fifth, put inventory in the stores. People are tired of buying used demos for full price. Sixth, stop selling returned equipment as new...in most cases it is not.

Regards,

Duffy

+too. I couldn't see any speaker grille or mike hole, either...

The mike grill is a teeny little thing near the top... almost an
afterthought :) There *are* 'way too many controls on the thing (42 buttons/
switches, 4 pots, and a joyswitch). It took me a while to develop a technique
whereby I could pick it up from the mike holder without pressing a button or
two. Once held, it's pretty easy to use without pressing excess switches,
though I don't like the feel of the PTT switch.

ARLB052 Oklahoma help completed

The primary Amateur Radio operation in support of recovery efforts in the bombing of the federal building in Oklahoma City ended at 4 PM on Tuesday, May 2.

Amateurs had maintained a network continuously since 9:15 AM on April 19, with more than 300 operators from Oklahoma, Kansas and Texas providing communication through the Oklahoma City Autopatch Association repeater.

Amateur operation then shifted from the blast site to coordinating Salvation Army activities, on a simplex frequency. As of 4 PM on May 4, Amateur Radio operators in Oklahoma City had conducted emergency communication for more than 360 hours.

ARRL Public Information Coordinator Tom Webb, WA9AFM, said that those involved in the post-bombing communication effort credited numerous disaster drills, established Amateur Radio networks, emphasis on proper on-air procedures, and experience in weather spotting nets for the success of this operation.

Later this month, Oklahoma City amateurs will meet to discuss their activities and for a debriefing.

Gee Bob, I wish I was able to go to Dayton this year and wear my John Debella
shirts. Maybe next year!
Joe - AA3GN

Wore one of my Hawaiian shirts to the grand banquet. Didn't attract much attention,
though.

Does anyone know of similar problem with the HTX-404? I have one and I get
an almost continuous carrier on 444.700 It fades in and out when I move the
HT around but I hear it every where I go. I get it on external antennas
and on the stock duck..

Subject: is there code tapes for 35wpm ?

I just recently passed my extra. so theoretically, I can copy
20wpm in an ideal condition. but in reality, I have to deal
with a lot of qsb and qrm, and the hardest part is people sending
with uneven spacing (usually from straight keys sending at 20wpm).
so I am having a hard time copying during qso's.

I find though, that copying 13wpm is now very easy, no matter how
bad the code is sent. so I was wondering if there are code tapes
I can use to up my speed to 35wpm so I can copy 20wpm code sent
badly.

I recently got the KB6MT words tape, which does 35wpm for only 30
minutes of the 3.5 hour tapes, so I want to know if there are
other code tapes out there for higher speeds > 30wpm.

thanks

Subject: location of the hamfest on Sat, Melbourne

Dear Ham Friends in Melbourne, Australia:

I was told that there will be a hamfest in Melbourne, Australia on Sat
13/05/95 (that's a day away). The address I got was in Ridgeway School,
Glen Waverly, near Heath Street. I can find Heath Street, but I am unable
to locate the Ridgeway School on my Melway. If you hapen to know the event,
please drop me an e-mail or a phone call on (03) 9899 2860 (home), (03)
9344 7416 (office), 015 351 198 (mobile).

I have told several of my friends about it and they are also intended to
go. Please reply this message as soon as possible so that I could inform
my friends.

Thanks in advance for your help.

Karl, you need to change "routinely seize" to "once in a blue moon seize".
FCC enforcement in this area is so lax as to be nearly non-existant. That
doesn't mean you're wrong about it being illegal though.

Gary

Subject: PACKET RADIO TO THE INTERNET?

Hello and many thanks to everyone reading my article.

I've started `packet radio-to-the Internet' mail gateway service
on 1.2GHz FM since last March, so I would like to know how active
or popular such connectivity is now in your side.

The straightforward question is as follows:
Can you access the RBBS or gateway which handles the Internet
mail through packet radio? Are you running the system to serve
the Internet mail exchange for local packet radio users?

In this context, the term `packet radio' includes neither radio
TCP/IP nor FWD-NET. In the system of mine, the users are able to
connect to my TNC by the simplest manner in which reading and
writing mails from/to the world are processed by the easy menu-
driven user interface. The figure below illustrates the outline
of the current operation.

Brian,

Why does your e-mail bounce? I tried to take this off the
news group but the mail bounced.

I quoted your entire post less the header. At least all that
got to me.

They should pull Glen's ticket for broadcasting, interfering
with communications in progress, interfering with an emergency
net. If what the Georgia emergency net alleges is true about
being given two hours to get off "his" frequency he doesn't
deserve to be called ham gentleman or anything other than "the
operator formerly know as K1MAN".

I am sure you and Glen have some guard house lawyer rational
why he should be allowed to be a broadcaster on the ham bands
but I don't buy it. This kind of crap is going to end up in
actions that will be detrimental to the majority of hams.

I have read his packet postings and when propagation was right
heard his broadcasts. All of it is self serving ego stroking
nonsense.

I urge the concerned amateurs to write the FCC asking for
engorgement of rules. If the rules aren't clear enough for
Glen then perhaps they can be clarified. I suspect many of the
other innocent bystanders in this would support a stronger
broadcasting rule and a specific exemption for W1AW.

Enough on the news group. My e-mail address is posted you
can reply there.

Subject: Yaesu FT530 keypad sequences

Ahhh not correct...

to reset the factory memory, you do the MR and VFO buttons..

to open the 800Mhz band up after the jumper removal, you hold
down the UP and DOWN arrows while powering on....THIS resets the
band edges and also turns on the 800-950 Mhz band...

Where does it say that it is illegal to have a modified radio that is capable of transmitting out of the ham bands? There is no type acceptance requirement for our gear (except certain external amps) as long as you don't stray from authorized freqs. So what do you mean when you say "illegally programed to operate out of band"?

There are legitimate reasons for having out of band transmit capability. I have used my transceivers overseas where FCC type acceptance is worthless.

: Open 440 repeaters in So. Cal? You must be kidding...

It's about time that someone cracked down on these people, not only in
California, but elsewhere, who believe they can hold a frequency with no
activity.

The Texas VHF Society (TX coordinators) have been doing an admirable job
lately of waking up sleeping frequency occupiers, letting them know that
it's "use it or loose".

Just don't get malicious with your fight, and compile lots of data to submit
to both the ARRL and FCC.

No, Greg, you are slightly misinformed about the FCC requirements. The jumper cannot legally be left in place to allow front panel programming. As I stated earlier, this violates the FCC type acceptance and makes mere POSSESSION of the unit illegal. Refer to the FCC Rules (47 CFR) Parts 2, 15, and 90 for details. That's why there is a printed warning in the official Icom service manual telling the service tech to remove the jumper before the unit is handed to a commercial user. Federal courts have upheld the FCC's presumption that possession of a non-type-accepted unit indicates that the user intends to communicate using equipment that is prohibited under the rules.

Under Part 97, your Amateur license does allow you to pick any frequency within the 2M band from the front panel of your rig. The FCC commercial rules in Part 90 are not so generous as to allow anyone to simply buy a radio and program it to the frequency of their choice. Thus, if you decide to mix two or more radio services into the same radio unit, you have to abide by the strictest of every requirement where there is a difference between the various service rules.

The FCC periodically issues warning statements to the amateur community reminding hams that they are prohibited from operating on Part 90 public service frequencies with their non-TA'd amateur equipment. They also routinely seize ham radios found to be illegally programmed to operate out of band and suspend or revoke the user's amateur license.

While unable to directly answer your question, I can offer my tips about pc-rfi.
I wrapped several ferrite split-cores on every wire and cable inside my machine.
This reduced the noise quite a bit. Also getting a good bond between the case,

power supply and motherboard. Now only some highly active graphics cause interference. My line-voltage cables also have ferrite cores and are shielded. My GASFET is mast-mounted however. Best of luck.

Design is not the problem with the R.S. stuff in some cases, the
problem is the quality of components and manufacture. By the way R.S.
designs very little anymore. Most of the stuff is designed by the
R.S. contractors.

Capitalism is not ripping off a customer! I think you need some
schooling on this issue. Show me a definition of Capitalism that says
it is ripping off the customer. Profits are great, the more the
better. Excessive profits at the expense of quality and the consumer
is still ripping off the consumer.

I have built four different radios from kit or scratch (QRP). The ability of a resistor to handle the flow of electrons, like anything else, depends on the QUALITY of the resistor. Little parts are also not causing the severe imbalance of trade.

I know that most other retailers are not marking up their goods beyond keystone. Jewelry, I don't know about or care about.

>>Duffy
>
>Say Duff, did RS turn down your credit application? Your anti-RS posts
>lead me to believe you have some ax to grind. You used to work for them -
>did you get fired?

Jeffy, I worked for RS for five sickening years. Never got fired, but I did quit in December of 1977. Just could not take the way they ran their company. In fact, I was one of the few employees at the retail level they begged to keep and the only salesperson in the entire district that made it through five years without getting fired.

Turned down my credit application? Get a life! Who needs credit from RS if you don't buy anything from them except little stuff. I would venture to say that my income exceeds yours. You may need credit at a 21% interest rate. I guess people with poor credit ratings have to pay higher interest rates and that is why they must go to the stores to get credit. I you really using one of those RS credit cards? Can't believe you are paying those interest rates! But if that is the only credit you can get....well I understand.

>>Duffy

For both of you, I suggest that the same would be true of the
folks from the "YaeComWood" consortium and quite possibly from TenTec
as well, or R.L. Drake, or..... well, you get the idea.

Whatever anyone wants to think of Rat Shack and some of their
more dumb in-store policies, I think they at least deserve an "E"
for effort in getting into Amateur Radio at all. Even if their motives
were pure profit in taking advantage of the large numbers of
no-code techs, if we make it profitable for them to continue doing
so it will make life for a lot of hams a great deal simpler in
terms of having more outlets to acquire some gear.

While I doubt that we could expect RS to ever market a
10-80 meter all mode rig, some expansion seems likely in their line.

: > a fluorescent light or a dimmer.

I thought I'd point out that the QST article talks about AC hum
generated by the *antenna system* changing, as opposed to being
generated by an interference source. The diodes in an AC power
supply turn on and off, and change the contribution of the AC
lines to the antenna system. Thus, you only hear the hum
on relatively strong stations. On the other hand, interference
sources like lights or dimmers wreak havoc on weak stations,
and can be heard even when you aren't tuned to a station. It
can be awfully difficult to find an interference source that
isn't there...

|> > use.

Hams are among the most idiosyncratic and difficult-to-organize
people on earth, and repeater owners even more so. I doubt this situation,
nor that of SCRBBA, will change soon.

Here's one for you: yes, SCRBBA is made up of 'good old boys'. Has
it occurred to you that most of the people with access to hilltops around
LA, including site owners and managers, are in SCRBBA, and like things
just fine the way they are?

Hilltop access is very VERY difficult to get in LA, and most of
those who've got it are in SCRBBA. A new body isn't going to get very far
if none of its members can put up anything but low-level repeaters.

Of course none of this is black-and-white. Sure, some folks not
in SCRBBA would have no trouble placing repeaters. But most of the folks
with hilltop access are already part of the establishment. The point is
not that a new organization couldn't succeed, but that it would immediately
face severe and probably fatal challenges on several fronts at once.

440 coordination is full up in Los Angeles and nothing will change
that except outside force. The FCC is currently completely uninterested in
enforcement of any kind, no matter how severe the infraction, and this
attitude has gotten so bad that even the hidebound, reactionary ARRL has
started publicly scolding the FCC in reply comments...to no effect. And
the ARRL itself has nothing to do with coordination (except for the new
219-220 band, and a first-time conference of coordination bodies they're
trying to organize).

The elimination of SCRBBA is not impossible but it's highly
unlikely.

Duane,

In spite of this latest marketing promo from RS, I can tell you that they don't really want their people spending there time just answering questions. They naturally want them to sell as much stuff as possible. That's business.

On the other hand, they don't pay people enough to attract the brightest and most knowledgeable people. They way that RS has structured its inventory system, penalizes the manager when the salespeople sell products that are on sale. In order to balance out the margin loss they take on selling sale items, the RS salesperson has to push a bunch of stuff on the unsuspecting customer. These are items with very high markups. For instance, the Tandy Extended Warranty or TSP, batteries, cables, parts of any type. If the customers just buy sale items and nothing else, the manager looses his/her shirt.

This is why there is so much turnover in RS management. Tandy has structured it to be a loosing deal for them. However, as long as the customer knows how to protect themselves if they choose to buy RS stuff, they won't get stuck buying a bunch of accessories with sky high markups.

Regards,

Duffy

Subject: REPEATER WANTS SIGNAL REPORTS

I've recently activated a repeater in Greene County, New York and would appreciate some signal reports.

The repeater is on 145.45 mHz with a -600 khz input and is located in the Jewett/ Windham area of the Northeast Catskills. The antenna is at about 2000 ft AMSL and the ERP is around 40 watts. It can be identified by it's multitone beep and CW ID " KA2PAP/R ".

Please post your reports here or Email me at Iannace@AOL.COM. The repeater is currently at a temporary location and will be relocated to a 3100 ft mountain peak in a few months.

Subject: Scout-A-Rama Radio Station

Think that is great. I was at a scout function about 50 years ago and
they had a ham radio set up and were talking to people all over the world.
I never forgot that magic of being able to do that. It was probaly 40
years later before I got a license but it was still motivated from that
one scout function.

>Why is this is such an important topic to so many people?

In my case, I'm a listener more than a (VHF/UHF) talker. I see these rigs
more as scanners with ham transmitters inside in case of emergency (yes, I
have a cell phone, too, but they don't always work, either).

A friend of mine had to hold down the up/down arrow keys to enable the
jumper change. Also, I don't believe the newer units support 800 MHz.

Subject: Re: Dumbing down?! How could it get any dumber?

I wish I heard something like that on our local repeater, We have over
two hundred hams on our local repeater. Average age is 114. I monitor
it in when I am home and sometimes it will go 3 or 4 hours without anyone
using it! Lately I hear a couple of high school kids using it. I think
that is great. They seem to be very good about following procedure.
They may talk about something I'm not interested in but at least they are
using it! Ham radio is a hobby! It is supposed to be fun! We talked
about putting a phone patch on our local repeater. That was voted down
as everyone thought it would be used too much. Would that be worse than
not using it at all?

Just because the comments are negative does not mean I am bitter. In
fact, as stated before, I made a fair amount of money working for them.
Not as much as I could have made somewhere else, but it was fair.

My comments are related to how RS treats customers, reasonable pricing,
anti-consumer extended warranties, and an overall decline is quality of
their products the last 25 years.

If you don't want to accept the message fine, I understand. But let
the buyer beware!

This statement might be a little strong. I haven't looked recently,
but I regularly read the FCC news releases last year, especially the
FOB release, which details such actions as you describe above. I
didn't see any such seizures/license revocations. Can you point at a
few documented cases?

Thanks!

Marty,

There is a company in Maine that make such a computer program. The companies name is DeLorme
, I believe I have the spelling correct. They make a program that will reference you to an actual street map, although i think their map is finer than a road map. many cases it shows streets, farm lanes, driveways etc. The program costs about $ 400 to 500 dollars the last I knew. Lots better than APRS, but much more expensive. You can actually drive around town with this system and see where you are.

Nobody said they have the RIGHT answers :-).
TS
KN4TX

Whenever I'm stumped I come right out and tell the customer "Gee, that's a tough question and I don't know the answer but 'I don't know' still qualifies as an answer, doesn't it?" It's usually good for a chuckle and my customers appreciate the candor. ;-)

Come on folks, if you want to spend a lot of time dealing with people that have an engineering background then you're usually going to have to go elsewhere and pay a *LOT* more for the products they sell. 8-(

If it bothers you that you know more about the HT than the fellow that's behind the counter then take your business to a commumnications specialist like Motorola. They've got some SHARP people. Or do like I

did. Try to raise the average competence of your local store by working there part-time. It's interesting work and you get to meet the darndest people. ;-> (anecdotes later)

I was out of town last weekend but my co-workers told at least three regular customers I'd be in Saturday morning. They'll be in for some technical help. I really enjoy helping and will even engineer some custom solutions but will only go that far if there is the possibility of a reasonable sale behind the work or if I can rationalize it as good customer relations. I work on commission and can gross $8-9/hour but only when I can turn them over quickly. Consultation doesn't always pay very well and often costs me money. $-)

Some questions I've fielded:

"Hey you. I gotta question. My old clock radio quit working so I bought a new one at the discount store. I want to try to fix this old one. I think this burned up thing here is bad. What do you suppose it was and what can I do to fix it?"
"Golly fella, I haven't a clue, but the small parts are in the back of the store ..... Can I help who's next in line?"

"I just spent $1150 on the big screen TV and VCR at the discount store and I can't get them to work right. How should I wire them up to work with my stereo and my old vcr?"
"Follow the directions in the manuals and ask your sales person for help. Give him the opportunity to earn his commission ..... Next"

Or I could tell you about the young guy that came in one night with his girlfriend. He appeared to be drunk and quite upset because we didn't have any resistors with a "R" value, only "K"s and "M"s. He wanted to buy ONE 41R resistor. He was QUITE certain that was what he wanted because the value "R41" was silkscreened on his GF's circuit board. I wasn't about to take the time to argue with him about it so I just played dumb.

It works both ways. ;->

From: "Stephan M. Anderman" <sanderman@delphi.com>
Subject: This Week in Amateur Radio #111

Here is a summary of news items covered on edition #111 of "This
Week in Amateur Radio", North America's satellite-delivered audio
bulletin service, for the week ending 19-May:

1. FCC Issues NPRM Affecting Part 97 Rules
2. ARRL Asks Commission to Dismiss W5YI "Anti-bulletin" Proposal
3. Part 15 Users Side with ARRL on Allocations at 902 MHz
4. Hams in Oklahoma City End Emergency Communications Operation
5. "EZSATS" with Bruce Paige, KK5DO
6. Memorial Service Set for New England Microwave Pioneer
7. "The RAIN Dial-up" from Chicago
8. Upcoming Special Event Stations with George Bowen, N2LQS
9. "This Week" Announces Return to Satellite Next Week
10. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
11. Weekly Propagation Forecast
12. "Amateur Radio Newsline" - Edition #926 from Los Angeles
13. Additional Special Events over Memorial Day Weekend

"This Week in Amateur Radio" is a weekly amateur radio news and
information service, in audio newsmagazine format, which is produced
by Community Video Associates, Inc., a New York State not-for-profit

corporation based in Albany, New York.

The program is carried each Saturday at 7:30 PM (EDT). Due to the loss of our satellite transponder, the program will be carried live only in the Albany, New York area (145.33 MHz) and on 160 meters via WA0RCR at 1860 kHz. Affiliates may obtain the program by landline on a scheduled basis by contacting the producers. "This Week in Amateur Radio" will return to its home on Telstar 302, transponder 21, 5.8 MHz wideband analog audio, next Saturday, May 20th.

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @ WA2UMX.FN32AW.ENY.NY.USA.NA and on various landline bulletin board services.

Is August for gate one (clubs) or for all the rest of us?
Did he give any reason for the delay?

I've heard a bank in Pittsburg will be the gatekeeper. I wonder how they will fill the requests once they start the program. How will they resolve conflicting requests?
I asked this question on this group before and no one really knew.
I'm wondering _how_ the gatekeeper will do their job...

On a related topic, about a year ago I vaguely remember a thread about the theoretical number of callsigns available by license class. Since I upgraded to extra in January, I have been waiting to see if it comes up again. Does anyone remember these calculations or have posts from a year ago that show how many callsigns are theoretically available?

Nope, that does not violate any previously referenced rule. In fact I run
exactly that configuration in my vehicle, along with some military freqs
for which I am personally authorized. As long as I the user cannot change
the programmed frequency (which per 90.203g can only be entered by the
manufacturer, service, or maintenance personnel) I have not violated the
type acceptance. Therefore the unit can be used legally on Part 90
channels, the ham bands, and those military freqs where the FCC T/Ad
transmitter is considered acceptable.

You are PROHIBITED (see 90.203g again) from leaving the programming jumpers
in place or ,modifying the unit so that it can transmit while in the
programmable mode. That was the scenario proposed for the Icom commercial
unit, and it is a clear violation.

At the risk of sounding unpatriotic... I would prefer to buy American,
but if the American worker wants my dollars, let him earn them. If he
is so disinterested in his job, so concerned with shorter hours and
more benefits that he can't produce a competitive product, that's his
problem... not mine. I work for my money and I will spend it on the
best quality product at the best price. In many cases, unfortunately,
that may not be "one of ours."

Component prices, you say, are cheap. I'll give you one to think about
concerning buying American... At one point in my career with RS, we
were shipping memory boards to the Far East to have them populated with
American chips (Motorola I think) and shipped back to us. It was
cheaper than the cost of the chips alone in the USA.

It's a strange world out there!

If you have read the various threads over the past few years concerning
the RS 202 handheld, you'll find that they have many problems. Not
every radio, but a number of them. Some hams have reported returning
their radios four and five times. Seems there must be a real quality
problem with these radios.

So it is not surprising that the radio is displaying some interesting
problems for the owners.

Heh, I've got one of those. I did the switch trick too. By the way, did
you change the PIN diode in the TR switching? There is a service bulletin
on the Kenwood BBS concerning intermod problems in the front end. It was
driving me nuts with mix of Channel 2-TV and KUSC (105.5?) creating a
mix right on top of the packet repeater I was trying to use.

You're saying that a commercial radio can be programmed for any frequency
on which it is type accepted and its operator is licensed, but that you
can't enable operator entry on the front panel for commercial bands. It
seems it should still be legal for the operator to put the jumper in place,
program whichever frequences they need, then remove the jumper before
operating the radio. Or are you saying that it is illegal for a consumer
to program their own radio? If so, who is permitted to program a radio?

There is a LOT of interest in the UK in Heathkit at the moment.
Something to do with expensive JA boxes and a recession!

The UK magazine Ham Radio Today is featuring a series of articles
about old radios and the HW-101 recently appeared.

The usual warning about Heathkit is that the build quality is VERY
dependent on the skills of the builder. Few were factory built, most were
owner built. Have a good look around the insides of the radio and see how
many dry joints you can spot.
(Heath UK are reputed to have have a piece of equipment returned with a
"will not work, please fix" comment from the owner/builder. The guy used
either adhesive tape or glue to hold the components together!)

I've only had a few Heathkit items, the nearest I came to a tcvr was an HW-7,
so I can't be sure but I believe that their design was such that you could fix
them quite easily and ESPECIALLY if you have the manual! Plenty of space
inside and none of this surface-mounted component stuff to ruin your eyesight
and finger-tips.

p.s. Heathkit closed down in the UK partly because they were EXPENSIVE,
(xtal 2m set cost more than a systhesised box from Yaesu), and partly
because their after-sales service from their London based shop was
not good. I think the shop's staff wanted to sell their computers
and neither cared, nor knew, about anything else.

John:

Our club here at work bought such a rig to use for an emergency communications setup (i.e., there's an earthquake, the phones are down, and we need to call for a fire truck; (we're out in the country))

Our primary consideration was ease of use, as we'll probably not use this radio very frequently, so we needed something we could figure out without a manual, at least for the basic stuff.

We wound up getting an ICOM IC-2340H. It also has the attraction of the ICOM service center in nearby Bellevue, WA.

The radios we looked at were:

Icom IC2340H, Yaesu FT-5200, Standard C5718, and Kenwood TM-733A.

We've only had the ICOM for a couple of weeks, but so far I really like it. It's relatively easy to use, the duplicated controls for VHF and UHF make it easy to tune and control. We are also across the street from a fairly high powered UHF pager transmitter, somewhat notorious for causing intermod problems. We haven't yet heard any intermod of significance on the ICOM from it.

A personal note on the Kenwood: playing with it in the store, I got it locked up solid, just trying to tune to a memory channel. So locked up that the salesman had to cycle power with reset depressed to unlock it!

I did not find it's user interface at all intuitive.

The standard was also fairly unfriendly I thought; *All* the controls are on the microphone, and I just looked at it in confusion for a minute and put the mike down.

I did a score sheet on the radios we looked at, and here it is:

Wt Icom Std Yaesu Kenwd
3 Ease of changing bands 4 2 3 3

3 Ease of recalling and setting memories 4 1 2 1

3 Ease of direct entry of frequency (VFO) 4 2 3 3

3 PL tone stored with memory channel 4 4 4 4

2 Automatic determination of repeater 4 ? 4 ?
splits with frequency

3 Ease of going simplex 3 2 3 2

1 Back-lit keys and functions 3 2 1 4

1 Head set and mike

2 Ease of power output change. 3 3 4 4

3 General ease of control use. 3 1 3 2

1 Dual in-band recieve (listen to 2 2m 0 4 0 4
channels or 2 440M channels at once.)

1 Auto-mute of un-selected band 0 4 0 0

2 Built in diplexer 4 4 4 0

Score: 87 64 75 65

Hope this is of some use..

I just went for the Standard 5718. I really like it; especially the way that you can control the entire rig from the display mic. When parking on the street, I just put the mic under the seat with the radio and no one know's it's there (besides the antenna on the car). The expanded receive is the widest on the market and the thing is packed with features.

Josh, N2JLL/9

[3]
Hi David. I have two Yaesus mobile dual banders, an older FT-4700 and a newer FT-5200, both in current service. I choose them both for the remote mount capability of the front panel. It is the only way to get both bands neatly installed in a modern auto with a center console. It allows for a real slick installation. Both rdios have been flawless. The 4700 is mores than 4 years old. The 5200 is about 18 mos old.

I have heard that the Alinco radios are very subject to intermod interference. I can tell you that the Yaesus that I own are not immune either when in high RF areas such as NYC. Some of the dual banders need an external duplexer if you plan to use a single dual band antenna. That costs about $50. The 4700 needs one, the 5200 has it built in. There are pros and cons to both scenarios. If you wish to run an amp on only one band, the external duplexer allows you to do that in only one bands feedline. If inetersted in that, be sure to get a duplexer and antenna of suitable power. There are some dual band amps, but mostly lower power than I usually use. I prefer the Diamond line of mobile antennas.

Good luck,

Tom
K2CZ
---
[4]
I have Kenwood TM742. I bought it because I already own a Kenwood TH78A. Also, a bunch of my friends also have Kenwood; that makes it easier to learn from each other.

In general, I like the radio. There is no particular point I dislike about it. I live in L.A. Intermod is generally not a serial problem for me, may be I am not in the most series area. When I do experience intermod it is generally in the 440 MHz band.

One nice feature about TM742 is that you can add a third band, such as 220 MHz, 50 MHz, or 1.2 GHz.

David,

I will tell you about which radio to purchase but please send me all you comments because I am also interested on what others have said.

Personally I would purchase the Yaseu FT 530. The Kenwood TH series has great audio and features however it is a bit finnicky and not very robust and Kenwood is very expensive to repair. The Icom W21A has lousy audio but a very capable rig. Good receive capabilities form about 100MHz to 900MHz.

The Alinco is also not a bad piece of gear however the current models do not seem to be put together as well as the others.

Regards,

Len Spain

Subject: Re: Tell me about your mobile dual purchase...I'm looking

David,

I'm using a Kenwood TM-731A. I've only had one problem with it that I hope is cured. If I needed another mobile rig I would consider another Kenwood. If you need a Duplexer I recommend a Larsen. If you purchase a duplexer, especially a Genisys, I would check it against it's performance specs.

If you're thinking of using DSQ encoding/decoding check to see if any repeater you might be using will pass the DTMF tones. The ones around Kansas City often do not. The repeaters I worked on decoded the DTMF,filtered it out, regenerated it cleanly to the phone lines, then kept it from being re-transmitted. Not only did this give more reliable switching, it keeps those monitoring from decoding DTMF phone numbers.

Good Hunting,

Curtis, I agree that direct FCC enforcement has been lax, but when
illegally modified radio equipment is found, it is impounded. It happens
with very little public fanfare, just like all the money/cars/homes that
are impounded as a result of drug busts, etc. In fact , US Coast Guard
(Great Lakes-9th District) impounds radios found during routine inspections
if the boat owner cannot also produce a valid FCC license for same. It's
illegal for boats over a certain size to be on the water without a radio,
but you must have both a legal radio and a license.

>
> Where does it say that it is illegal to have a modified radio that is capable

> for our gear (except certain external amps) as long as you don't stray from
> authorized freqs. So what do you mean when you say "illegally programed to
> operate out of band"?

The FCC Rules, Parts 2 and 15, since you asked! Although there is no type
acceptance requirement for home-built amateur equipment, if the radio is
imported into the US, there IS a requirement for FCC approval. And the FCC
prohibits the manufacture, importation, and sale of equipment which is
capable of being operated in the Part 90 public safety / commercial /
business band unless it is type-accepted. One of the restrictions is that
the operator cannot adjust the frequency externally, except to preset
frequencies using a channel selector switch. This automatically eliminates
any radio that can be programmed by the user from a front panel keypad,
including the generic Yaecomwood 2M HT.

>
> There are legitimate reasons for having out of band transmit capability. I
> have used my transceivers overseas where FCC type acceptance is worthless.
>

We are referring specifically to 2M HTs, not to HF rigs operating below 30 MHz. I would assume that you also verified that the rig you used was legal and acceptable under the regulations of the countries from which you operated. As long as you don't leave the out-of-band features enabled when you return to the USA you're OK. When you come back in through customs, they can legally impound your HT and fine and jail you for bringing in a radio that is illegal to possess or sell under the FCC rules.

Subject: Re: cw is here to stay!

I see nothingwrong with that. Why can't they use 2 meters for something
useful? Our hobby will not be around if we don't do something about it.
I for one don't give a damn about electronics? A friend called me an
appliance operator. If my radio doesn't work, I see if it's plugged in,
if it still doesn't work I take it to the radio store! However, I love
the hobby. I love CW. But I can see why someone could love ham radio
and not care anything about CW.
It is a HOBBY. Its's supposed to be FUN. The average age of a ham is 58.
That alone should tell us we need to do something about it.

Nikola Tesla did extensive research into this in the late 1800's (See
Colorado Springs Notes) and early 1900's.

He received several patents on such systems.

James Harris Rogers also received numerous patents for such systems
around 1910-1919. I have copies of most of these patents and literature.

The US military used Rogers' system extensively in WWI. After that it
sort of disappeared off the face of the earth (no pun intended!)

It is an intriguing system and I will experiment with it one of these days!

>using it! ... Would that be worse than not using it at all?

Yes, it would. Proper amateur practice dictates that one should use simplex when at all possible, and leave repeaters for what they were intended -- low power or mobile stations incapable of working simplex.

Hearing two people sitting in their shacks across town yack on the local repeater is annoying.

When I hear two people using my repeater that I know can work one another simplex, I tell them to move off. Sometimes they have a good reason for being on the repeater -- a third party that can't work simplex is coming on, or they are waiting for someone, etc. Some leeway is good, as long as it isn't abused.

Subject: LOWEST RFI FROM WHAT COMPUTERS ?

In article <3ovg7r$jtt@taipeh.hl.siemens.de> wscad22@taipeh.hl.siemens.de writes:
>Almost all the computer make interference.
>Here are some tips that can help to reduce the interference of a computer
>
>1. The computer should be in a total clossed metal case
>most of the computer have a plastic front or case. trough this plastic the
>interference leaks out.

This is a good tip. All openings in the case need to be shielded. There
have to be openings for ventilation, but these should be covered with
metal mesh, similiar to the way any other RF equipment is handled. The
case seams need to be joined according to good RF practice. For VHF
suppression, that requires that the joining surfaces be paint free and
a screw should be used every 5 cm along the seam. Alternately, finger
stock can be used at seams. Removable media disk drive openings can
be a problem. Usually, the best course here is to install shielding
behind the drive bay and just suffer the interference when a floppy
is being written or read.

>2. The metal case of the computer must have a good ground connection
>if no ground connection is available try a radiator or make your own ground
>connection

This is not necesarily a good idea. Connection to Earth may or may not
improve interference suppression depending on the topology of the station
and computer installation. Frequently, connection to Earth will *worsen*
interference. You'll need to experiment with your particular layout to
see if this helps or not.

>3. All grounds should be connected at ONE point (make no ground-loops)

This is a good tip. Ground loops will insure mutual coupling of interference.

>4. Place a netfilter beteen the powernet and the power-supply-unit
>most computer power supplies bring a lot of interference on the power net of
>your building/group.

This is also a good tip. However, the filter needs to be bonded directly
to the computer chassis. Filters built into extension cords may or may not
help, and can sometimes make interference worse.

>5. Every connection out of your computer carries interfernece out of your
>computer
>if you have a modem it will increase the interference ot of the computer.
>All devices (if possible) should be places in the computer.
>Every line out of the computer works like a atenna.

This is generally true. However, use of internal modems and such can make
your computer more vulnerable to lightning damage. Properly installed and
connected, external modems can have as low an interference level, and offer
some lightning protection by keeping the telephone line surge suppressor's
return path off the computer chassis. Careful thought to Earth connections,
if any, can help here. Earthing the modem rather than the computer can
serve to keep surge return currents away from the more valuable computer.

>6. Don't place the computer to near to your receiver/transmitter.

Generally good advice. This will reduce cabinet to cabinet induced
radiation. However, proper shielding of *both* radio and computer
will allow them to be placed adjacent to each other without undue
interference.

>7. if you have different AC-groups in hour building place the computer on a other
>AC-group.

This may, or may not, help. Again it is a function of total station
topology. If you have any interconnections between station equipment
and the computer, such as a packet modem or the like, then you want
the systems on common power. Getting on another leg of the power
distribution will insure ground loops in this case.

>8. if you have the money by a Class A product (most of the clones are Class C)
>class A devices are the best.

This is wrong (for the USA at least). Class A products are permitted for
industrial/commercial zoning and have a higher permitted radiation limit
than Class B devices which are permitted for residential zoning. I'm not
aware of a Class C rating for computers in the USA (European standards may
be different). There is a third rating beyond Class B, however, and that
is Tempest. This is primarily for certain secure computer systems, and is
very well RF shielded.

An additional item, and the most important in most cases, needs to
be addressed. That's *monitor* radiation. For HF, and often for VHF,
interference, the monitor is the primary culprit. Most of today's
computer monitors have plastic cases and no, or inadequate, internal
shielding. Use of metal, metal mesh, or foils to shield the cabinets

will yield large interference reductions. Alternately, use of special EMI conductive sprays on the plastic cabinets will often work. For shadow masked color tubes, no additional shielding will generally be required for the monitor face. But for monochrome tubes, or Trinitron type color tubes, some sort of tube face shielding will be required. Fine wire mesh, painted flat black, can be installed over the tube face if required. This will do dual duty as an RF shield and a glare shield.

Special attention needs to be taken with the monitor cabling. The video cable will have signal components from the lowest LF to the VHF spectrum, and the power cable will normally have surge currents corresponding to the horizontal sweep rate and its harmonics. These cables need to be well shielded and properly installed to prevent leakage. Use of ferrites on cable shields will suppress common mode radiation leakage.

The final problem is the keyboard. Most keyboards are totally unshielded, and the key scan matrix can generate considerable interference. Ordinary shielding techniques will make the keyboard unusable, so different methods have to be used. Waveshaping of the scan matrix signals, and adequate decoupling capacitor use will go far to reduce keyboard EMI. Often, however, it's simply better to try several different keyboards and pick the one with the least noise generation. I've found the Focus 2001 brand to be particularly quiet, and to have good key feel and layout, so I've standardized on that one for all my PCs. Other keyboards may meet your needs better. Mice, too, can be interference generators. Again, trying several and picking the least obnoxious is usually the best course.

Subject: LOWEST RFI FROM WHICH COMPUTER?

gary@ke4zv.atl.ga.us (Gary Coffman) says (concerning PC CRT displays):

>If the tube is color, and uses a shadow mask, IE isn't a Sony Trinitron,
>then its face is already effectively shielded.

I say...OOOooooppppps!! Doesn't quite a bit of current get through the shadow mask and impinge on the phosphors to cause the light? The CRT consumes 50 watts or more when really bright. More-than-you'd-like of the power/current is wasted by hitting the shadow mask, but a lot gets through to the phosphors to make light and RFI. At least my shadow-mask monitor is very noisy at VHF when wires are run near the screen. At VHF grounding

of the shadow mask would be rather poor in any case.

Still trying to quiet a PC at 50 MHz,
73 de Bob w3otc

Believe it or not, this is NOT new. When I got my Novice ticket in 1966, the Ameco study guide had the questions and answers practically verbatim from the FCC amateur radio tests.

Not that I think this is good, just that it's not new. 8^{)

Subject: Re: Dumbing down?! How could it get any dumber?

You have some very good points Ed but what you "missed" was the ongoing
"no-code techs are evil" issue. I maintain that it isn't the operating

class that determines the worth of an operator but rather his* intellect.
(*gender non-specific)

There are so many people who get on the air and just drone on and on and on
about minutia. What really drives me crazy is when some butthead
keys up and THEN thinks ("ahhh...") about what he's going to say for 15 to
20 seconds before the first word come out of his toothless mouth.

Then there are the people who think they are "cool" and despite being
fairly inexperienced, feel the need to have a presence on EVERY area
repeater. They call in unnecessarily-redundant weather info during
"storm nets" just so everyone can hear them on the air (of course the
wind is always blowing 20 mph faster and it's raining like a monsoon
at their QTH) and in general they just have annoying radio manners.
There's one guy who repeater hops. He'll have a conversation and then
once he's pissed off enough people, he moves to the next. I'll bet he
hits three or four repeaters and hour for a couple hours and then
starts all over.

I'm a pretty easy person to get along with but I'll tell ya,
there are some calls that have been indelibly burned in my memory. If
I ever meet these morons in person, I'd like to sucker punch one of
them...1/2 :)

Bottom line: Nothing wrong with casual conversation. I agree with you Ed,
all tech-talk can get boring. My first post that started this particular
thread was focused on really boring hams who are boring on the air because
they are boring people. I think people need some balance in
their lives. That's why I think amateur radio needs to attract a more
diverse group of people, including youngsters. If "the cancer"
continues to spread, we'll end up with VHF CB. If we tactfully
discourage poor operating procedure ON THE AIR then we will, if
nothing else, make people think about it. Those who continue to abuse
the airwaves will do so because they are low-class individuals, but NOT
because they lack insight or training.

>
>From the preceeding post, I infer that it is now illegal to possess a ham

>radio programmed (or modified) to operate out-of-band. Is that what you
>are really saying?

What Karl and I are both saying is that the FCC will take having
transmission capability in services for which the radio is not
Type Accepted as prima facia evidence of the intent to *use* the
radio on frequencies for which it is not approved. This stand was
accepted as case law beginning with the prosecutions of outlaw CB
operations outside the CB band, and has been interpreted by the
courts to hold for other services as well. The FCC can seize and
destroy such equipment, and/or use it as the basis for a prosecution
against the owner for operation out of band.

What I've been saying is that such prosecutions are very rare. The
FCC doesn't go around routinely checking amateur radios to see if
the owner has set them up to operate on frequencies for which
Type Acceptance is required. If the FCC were to inspect the equipment,
however, perhaps for some unrelated reason, and found them to be
setup to transmit on frequencies for which Type Accepted equipment
is required, they could seize the equipment and start a prosecution
against the owner.

Note that the basis for these actions is case law, not explicit
CFR-47 regulations.

The best information you can get on this subject would be from Ray Davis, KD6FHN He is the President and founder of M.A.R.C. Motorcycling Amateur Radio Club. His group has been featured in several magazine articles, ie, Wing Rider, 73 and CQ. I dont believe that Ray has access to these newsgroups but you can contact him at:

Ray Davis
3 Lindberg
Irvine, Ca. 92720
1-714-551-1036
Ray will be more than happy to provide you with all the information that you require. Ray's Wing has a Kenwood TM-741A and a TS-50S on it. Tell Ray that KB7UB (BUBBA) told you to call him...

I have noticed several posts on Solar Flux and A & K indices. The best information I have found comes from the Space Environment Services Center. you can write them at:
Space Environment Services Center
NOAA/ERL/SEL - R/ESE2
325 Broadway
Boulder, Co 80303 U.S.A.
There is also a LL BBS 1-303-497-5000. The board is completely menu driven and contains an extensive "help section". 300 or 1200 baud: data word protocal is 8 bits/character, with 1 stop bit and no parity. Available material includes HF Propagation reports based on actual operational experience during the previous several hours, regular Solar reports that give ore extensive data on solar and geomagnetic activity that the Geophysical Alert broadcasts, and Maximum Usable Frequency (MUF) predictions based on user-supplied geographic coordinates and SESC supplied sunspot numbers. Data on the Bulletin Board is constantly updated from the Space Environment Laboratory's worldwide data base.
You can also send for a 20 page manual NOAA Techical Memorandum ERL SEL-80 from National Technical Information Service 5285 Port Royal Rd. Springfield, VA 22161. I believe it is also available to download, but at 1200 baud a little slow and costly.
This Manual covers, Electromagnetic Radiation, Geomagnetic Activity, Solar Energetic Particles, Solar-Terrestrial Indices, Solar Flux, A & K Indices.. Probably much more than you would care to know. It will also allow you to pull down a 27 day forecast for your area if you have your Latitude and Longitude available.

Hope this helps: 73 de KB7UB

Just the info I've been looking for!! May I ask where the Focus 2001 is
available from and have you tested it for susceptibility to EMI? My biggest
problem is with RF getting into my keyboard and causing it to generate
spurious characters. I've put ferrite beads on the cable and installed
caps/coils in series with the wires, but still occasionally have the problem
at certain beam headings, especially on RTTY.

3168. Question: Out of band transmission issues

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-17 00:00:00 UTC
From: sbnoble@cindy.cs.uoknor.edu
Message-ID: <3pd959$j4r@romulus.ucs.uoknor.edu>
Source record: 246262

I am new to amateur radio (so please forgive any cluelessness) and am about to purchase a hand-held. I noticed that many hand-helds restrict transmission to HAM bands but allow much wider reception.

I know that for many bands (marine, commercial, household) the FCC requirements for transmitting are more lax than the Amateur bands.

What I would like is a hand-held that can transceive on other bands for which I otherwise have authority. For example, this summer I will be going on a boat trip. As a crew member, I could use a marine hand-held to transmit shore-to-ship under the ship's registry number / marine radio license. But since I'm about to spend lots of money on a ham transceiver, it seems a waste to have to buy a marine one as well.

Another example would be communicating with a set of retail radio-headsets which operate on pretty much unrestricted bands.

How difficult would it be to modify a hand-held to transmit on a wider band? What regulatory issues (if any) would be involved?

Some points I have already heard are that the mods may require soldering skills beyond my ability and that the equipment would not be FCC certified for transmission out of the original bands.

Any comments or suggestions via usenet or email would be greatly appreciated.

Thanks,

Seth Noble
(Still waiting for my callsign).

Greg,

I agree...
This is a "you-take-your-chances" situation. I've bought lots of magazines based on the cover only to be
disappointed because the articles inside were worthless.
If everyone "TRIED" to follow some protocol about what and how things were posted then the newsreader
would work smoothly. By looking at the subject line you determine whether or not it is of interest to you; you
read the article and if it has a forward regarding the format, etc. like you mentioned then you save it to your
disk or send it directly to your printer. When something's free my motto is: "Beggers can't be choosers."
In your case where the file was relatively small it is fine with me to see posts for 'tifs', 'gifs' or whatever. I was
subscribed to a sounds and pictures usersgroup where they would post 26 files at a time and in order to get
just one sound or picture you had to download all 26 files and decode them into one just to find out it wasn't
what you thought it was. I suggested that pictures requiring this many files in order to be posted perhaps should
be listed instead as available at an FTP site somewhere that was made available for the users group. I got
flamed to the well-done stage and dropped out. Yes, there is abuse of this system and if controll is not enforced
by its users then there will be no order at all.

Guess we'll burn together!

Hi VHF'ers,
I have just rxd all the air/hotel tickets for the D4 50MHz trip.
We leave London on May 30th (less than 2 weeks!), stay in Lisbon for the
night, then continue onto Cape Verde the following day.
Operation should commence on June 1st from the QTH of Julio D44BC.

Equipment is: Yaesu FT650 100 watts, with backup TS60 100 watts which will
be left with Julio when we leave on June 14th for future 50MHz operation.

The operators will stay at the Aparthotel in Mindelo, the room/phone number
will be passed out on arrival.

Callsign will be D44BC, locator is HK76MK.
We will also be qrv on HF (especially 28.885MHz) with a TS940 and Alpha kw amp.
Gud luck and pray for Sporadic "E"
Geoff GJ4ICD.

Darrell, the answer is to move. Here in London the mag still arrives in
its plastic bag. This month the bag was quite shredded but the magazine
survived better than yours, by the sound of it. By the way, that issue I
got this week was May, so no - I didn't bother to read the classifieds!

Around here the old-timers don't have a monopoly on the
royal/editorial/ham "we". Some of the new hams are just as bad as the
old ones. Same thing with "here" and "there". Two of my favorites:

"We're a truck driver here".

Ham 1: We're going to Dayton this year.
Ham 2: That's great - who's going with you?
Ham 1: Just we are going.

How about a couple more - HI HI every so often, even though nothing
even remotely funny has been said; and, (apparently coming from old AM
days when solid copy, no QRM was a dream) repeating things twice.

I wrote articles in the last couple issues of our repeater club
newsletter poking fun at some of this verbal inaneness, but so far I

haven't seen much effect. Guess I didn't really expect the old-timers would change, but maybe some of the newcomers will take the hint. If this thread continues, I should get some more material for future articles.

On the other hand, newcomers are welcomed on our repeaters, with none of the "snobishness" that seems to infect some systems.

3178. ANTS on 300 Ohm Twinlead

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-17 00:00:00 UTC
From: u790481@emngw1.emn.COM
Message-ID: <199505171218.AA19000@emngw1.emn.com>
Source record: 246272

I went into the shack this morning and the delightful sight of dozens of little ants lined up on the twinlead outside my window greeted me. They had apparently come from my dipole in the trees and followed the feedline... Luckily, none of them made it inside, due to the tight fit of the window.

Has anyone else dealt with this problem before? Is there something that I can put on the twinlead to discourage these insects? If so, would it need to be reapplied after rainstorms (common in the foothills of the Smokies)?

More insidious -- I had checked into a CW net two nights ago -- the first time I had used CW in a long time. Could the melodic waveforms of my perfect fist attract and enchant these powerless creatures in a Pied-Piper fashion? :^)

As radio talk show host Bruce Williams says over and over is, "nothing happens until somebody sells something." In other words, profits are great and paying off shareholders is great, but that cannot happen unless somebody is moving the product out the door.

I disagree with customers being comfortale with salespeople that know little. I have been a salesman for over 20 years. Customers hate salespeople that do not know what they are selling. What customers hate about salespeople are: salespeople who misrepresent the product, salespeople that do not listen, and salespeople that only think about their needs instead of the customer's needs.

Amateur Radio Newsline #926 17 May 1995

Amateur Radio Newsline is produced as an audio service by Newsline, a
service of the Westlink Radio Netowrk. The transcribed version is produced
by Dale Cary, WD0AKO from materials provided by Newsline. and is jointly
distributed to online services and bulletin board networks by Steve Coletti
and Dale Cary.

Editorial comment, news items and all other business should be directed to
Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com
Phone/Fax - +1 805 296-7180, fax senders wait for voice prompt.

The following is a QST

Hams help avert tragedy in Dallas, Slow Code seems dead in Dayton, a change for SAREX on STS 71 and taxicabs on the ham radio satellites. Find out where the signals are coming from on a special extended Newsline report number 926 coming your way right now!

(*****
DALLAS HAIL STORMS

Dallas County RACES sprang into action late on Friday May 5th as a series of ferocious hailstorms shattered windows, pockmarked cars and collapsed buildings across the Dallas-Fort Worth area. Thirteen people are confirmed dead. Four others are missing and presumed dead and over 100 others were injured. The four missing people were apparently swept away in a storm drain in downtown Dallas.

As the storms approached, Dallas RACES went on tactical alert. The local Skywarn system was activated with hams feeding information to the National Weather Service in Fort Worth. Others provided police, fire and emergency services with hail and flooding information.
Several ARES groups were also activated with at least one group of hams reportedly dispatched to the local Mayfest. Mayfest is an annual outdoor festival in west Fort Worth and many of the injured were attending this event.
Auto dealerships in the Dallas area reported damage to new cars from the hail that reached the size of baseballs. The Fort Worth police department's 45 brand-new cars were also damaged by the hail, which was accompanied by winds of over 70 mph and torrential rains.
Damage to the area was estimated at $250 million. The exact number of hams involved in this emergency operation is not yet known.
More on this story in a future report.

(*****
IS SLOWCODE DEAD?

Is the Amateur Radio Industry Group's 10 word per minute slow code dead? It probably is since it was not even discussed at the April 27th industry group meeting in Dayton Ohio. The first gathering of the loose knit association held in a year.
According to several sources close to the organization, it is not that the ham radio industry would not like to a lower Morse code speed requirement it is just that international trade policies have gotten in the way.
Most ham gear comes the Pacific Rim manufacturers and currency exchange rates are topsy turvy. The value of the U.S. Dollar is falling daily against the Japanese Yen. The fewer Yen that a dollar will buy means that goods from that Pacific Rim nation must increase in price here in the United States. And with no stabilization of the currency exchange rate in sight, its only a matter of time before goods marked Made in Japan take yet another large jump upward in price.
The ham industry knows this will translate into even lower sales. It also knows that it needs more incentives for hams to upgrade and to buy new radios.
But most industry watchers agree that the group has lost its "window of opportunity" with to file such a regulatory change request. Washington watchers say that the time to have filed the slow code petition would have been early last summer. That way, the FCC staff would have had the better part of two months to prepare a rules making request and another few months to evaluate comments before the major reorganization took place at the agency.
But for reasons known only to the industry groups leadership, the organization dawdled. It has done nothing on the slow code front for a year. In fact, the Amateur Radio Industry Group did

not even hold a general meeting until two weeks ago in Dayton. The normal February meeting in Miami was canceled on only a few weeks notice. Attendance at this latest meeting was far from spectacular.
But there is also speculation that the industry group held off filing for slow code to see what success, if any, the New Zealand based Organization Requesting Alternatives Through Code Less Examinations would have.
ORACLE as that group is known, has as its primary mission making Morse Code testing optional rather than mandatory on a worldwide basis. Its members have been lobbying the communications regulatory agencies to support such a change. And, as previously reported, their lobbying campaign has convinced the New Zealand government to bring the issue of deleting the Morse testing requirement to the next World Radiocommunications Meeting. A meeting scheduled for later this year.
And, that could be on reason the ham radio industry is backing away from slow-code. It may be waiting to see if ORACLE will succeed in getting worldwide no-code established on the Amateur Radio high frequency bands without intervention or assistance by those who manufacture and sell the equipment used by radio hobbyists.

(*****
BULLETIN NOTHING

If the rules change request by VEC administrator Fred Maia, W5YI was supposed to arouse interest by the ham radio community in a perceived problem being caused by bulletin stations operating on the high frequency bands, it has not achieved this goal. Quite the opposite, as those attending the recent Dayton Hamvention bulletin services forum will attest.
Only thirty one of the 32,000 hams attending the Hamvention bothered to seek out meeting room 3 for the highly touted debate between Maia and HF bulletin station operator Glenn Baxter, K1MAN. And when it was time for the interchange to begin, Maia was a no-show, opting instead to have Baxter read a prepared statement for him.
In a telephone call to Newsline the day after the abortive debate, Maia said that he could not make it because the FCC forum in an adjoining room was running long. Maia said he felt he had an obligation to stay there and gather FCC information for inclusion in the next edition of his W5YI Report.

(*****
OMEGA RADIO RIP

Listeners to Newsline on the satellite delivered program This Week in Amateur Radio were surprised last week when all they heard was dead air. This is because the Omega Radio Network, which provided satellite time for This Week in Amateur Radio and several

other hobby radio shows has gone silent.
Steven Anderman, WA3RKB and George Bowen, N2LQS produce This Week in Amateur Radio. They say that they are looking for a new satellite home for their program. In the meantime, they will be feeding it out on 160 meter AM using the facilities of Vern Jackson, WA0RCR and his 160 meter Gateway Net.
If you know of some inexpensive or free time on a C-Band geostationary communications satellite, please give George and Steven at call at area code (518) 383-3665. In our book, this is a very worthwhile service that deserves your support.

(*****
DETAILS ON HF DATA

As reported last week, the FCC has released its Report and Order in PR Docket 94-59, concerning HF digital communications in the Amateur Radio Service. The new rules, effective July 1, 1995, permit automatically controlled HF RTTY and data stations to communicate with one another in the following segments: 28.120 to 28.189, 24.925 to 24.930, 21.090 to 21.100, 18.105 to 18.110, 14.095 to 14.0995, 14.1005 to 14.112, 10.140 to 10.150, 7.100 to 7.105, and 3.620 to 3.635 MHz.
The new rules also permit manually controlled stations to initiate communication with automatically controlled HF RTTY and data stations. In this case the automatically controlled station may use any frequency authorized for such emissions, but may occupy a bandwidth of no more than 500 Hz.
Automatic control must cease upon notification by an FCC engineer in charge that the station is transmitting improperly or causing interference to other stations.
The FCC said it recognized the concerns of those who opposed the proposal on grounds that such operation could interfere with other amateurs, but that it believed the provisions adopted would be adequate to minimize such interference.

(*****
SAREX FREQUENCIES CHANGE FOR STS-71

Space Shuttle flight STS-71, to be launched in June, is the first to feature a docking between the Shuttle and the Russian Mir space station. And on this flight, special Shuttle Amateur Radio Experiment voice frequencies will be used. These special are a Downlink of 145.84 MHz worldwide and Uplinks on 144.45 and 144.47 MHz worldwide.
SAREX and Mir Amateur Radio stations normally share the same downlink frequency, which would cause interference on the STS-71 mission. Because of this and lessons learned from using particular frequencies during previous SAREX missions, the SAREX Working Group has made these changes for STS-71. The new frequencies were chosen after much deliberation to minimize interference between SAREX, Mir, and terrestrial stations.

Most SAREX operations are split frequency, with astronauts transmitting to Earth stations on one channel and Earth stations transmitting to astronauts on another. Listen to the downlink and transmit only when the shuttle is in range and astronauts are on the air. Mir operations are simplex and remain on 145.55 MHz.
We will have more ham radio space related news later on in this newscast.

(*****
N6NHG TRIES TO HAVE CHARGES DROPPED

Alleged computer hacker Kevin David Mitnick, N6NHG hopes to have some of the charges against him thrown out on a technicality. Mitnick, 31, is scheduled stand trial on May 22nd in a Raleigh North Carolina federal court on allegations that he broke into corporate computer and communication systems.
Back in February Mitnick was charged in with 23 counts of computer fraud after FBI agents raided his Raleigh apartment. The agents were helped by San Diego computer expert Tsutomu Shimomura and cellular telephone company technicians who transmitter hunted the signal of a phone Mitnick allegedly used to break into computers.
But in a motion filed by defense lawyer John Dusenbury, Mitnick claims that the search warrant federal agents carried was illegal because it listed the wrong address. Dusenbury's motion says that one FBI agent put his foot in Mitnick's door and five others forced their way in after midnight on February 15th. Agents had contacted a judge for a search warrant about 9 p.m. on Feb. 14, but the warrant listed the wrong address. The magistrate gave verbal authorization to search Mitnick's apartment about 1 a.m., after the search had begun.
As a result, the defense motion asks that all but one count of the indictment be dismissed because of technical errors. The count that Dusenbury did not ask to be dismissed involves possession of unauthorized access devices. No ruling has been made on the motions made to the court by N6NHG.

(*****
HACKER POULSON SENTENCED

Another computer hacker who illegally gained control of telephone lines to three radio stations so he could be the winning contest caller has been sentenced to four years in prison and ordered to pay a $58,000 fine.
Kevin Lee Poulsen, 29, a former computer security consultant to the Pentagon, admitted using his computer to fraudulently win two Porsches from several radio stations.
The sentence handed down against Poulson is believed to be the largest sentence given to a computer hacker.
Poulsen's lawyer says he planned to appeal. Meantime Poulsen faces additional charges of stealing classified U.S. Air Force

information listing the names and locations of structures that would be attacked during a war.
Unlike Mitnick, Kevin Lee Poulson is not a ham.

(*****
QUELLO vs. HUNDT

FCC commissioner James Quello says that he has had a rocky relationship with chairman Reed Hundt, but the veteran commissioner says that he is ready to bury the hatchet. Quello, ad-libbing from a speech at the opening of a recent Las Vegas telecommunications convention, conceded that reports of discord between the two have been mostly accurate.
Commissioner Quello says that he is ready to extend an olive branch to Hundt who Quello says faces a tough job. Quello added that he sees no faults committed by others that he doesn't see in himself.

(*****
STS-67 RECORD

Records, records, records. Space shuttle STS-67 set a number of them, including most days in orbit. A record number of Amateur Radio licensees were on board, too, six of seven crew members. The 26 schools, in 17 states, scheduled to have a contact with the shuttle was the largest group yet in the Shuttle Amateur Radio Experiment program, and all 26 successfully made their skeds!

(*****
TAXI SATS

Amateur Radio satellite operators in Spain have asked that nations telecommunications regulatory agency to stop Taxi companies in Madrid from using the satellite frequencies for their communications. Illegal Taxi communications are reportedly making ham radio satellite communications unusable in Spain and in other parts of Europe when the satellite is visible. The taxi services are not actually using the hamsats to communicate. Rather they are illegally operating their dispatch services on frequencies reserved for Amateur Radio satellite operations. Several European Amateurs have offered ideas on how to deal with the problem, but government assistance has been very slow.

(*****
1995 AMSAT-UK COLLOQUIUM CALL FOR PAPERS

The tenth AMSAT-UK Space Colloquium will be held July 27, 28, 29 & 30 at the University of Surrey in Guildford, England. This year's colloquium will be divided into the topic areas of Spacecraft Engineering, Future Space Missions, Operations and Associated Amateur Space Activities.

(*****
DX

In DX, to celebrate the cinquantenary of Frances' 38th Transmissions Regiment, the club station F6KEQ will be active with the special call TM0TRS for every national and international contest. If you work the special station, QSL via F6KEQ at P.O. Box 1307, F 53013 Lavel Cedex, France.

(*****
MINIMUM SIZE RULE ADOPTED FOR DXCC

And the ARRL Awards Committee voted 5 to 2 to accept a modified DX Advisory Committee recommendation to add a minimum size rule to Point 2 on Separation by water of the Countries List Criteria in the DXCC rules.
This change adds the following paragraphs to the existing rules under Point 2:

"(c) An island is defined as a naturally formed area of land surrounded by water, the surface of which is above water at high tide. Rocks which cannot sustain human habitation shall not be considered for DXCC country status.

(d) An island must meet or exceed size standards. To be eligible for consideration, the island must be visible, and named, on a chart with a scale of not less than 1:1,000,000. Charts used must be from recognized national mapping agencies. The island must consist of a single unbroken piece of land not less than 10,000 square feet in area, which is above water at high tide. The area requirements shall be demonstrated by the chart."

In other words, the days of making any rock in the middle of nowhere into a DX country have now come to an end

(*****
ARRL OUTGOING QSL INCREASE

Effective April the 1st, that's over a month ago, the cost of using the ARRL's outgoing QSL bureau went up. The new rate is three dollars per pound of cards up a dollar from the previous two dollar a pound rate.

(*****
CQ WW VHF CONTEST

From the Newsline contest log comes word that the new CQ World Wide VHF Contest will be held on July 8th and 9th. Complete rules have been posted in the America Online Ham Radio Club library, and can be found in the May issue of CQ magazine.

(*****
Dana Atchley, W1CF, SK

Some sad news to report. Word that Dana Atchley, W1CF, the
founder of Microwave Associates died April 22, 1995, after a long
illness. He was 77 years old and lived in Lincoln, Massachusetts.
In the 1970s Atchley created the "four square" vertical phased
array, for which he was awarded a patent. He later described the
antenna in QST. That antenna in recent years has seen a
resurgence in interest among low-band HF DXers and has become
virtually their antenna of choice on 80 meters. Dana, then W1HKK,
held postwar DXCC number 3.
Atchley was an active promoter of amateur use of the microwave
bands. He was instrumental in the creation of "The New Frontier"
column in QST. He also arranged for a grant to the Smithsonian
Institution from MA/COM in 1983 to help pay for renovations to
NN3SI, the amateur exhibit station there.
A memorial service will be held on May 31st, at the Acton
Congregational Church in Acton, Massachusetts.

(*****
SATAN

And finally, rampant fear over a program designed to find
loopholes in computer security and hyped as the possible precursor
to an online Armageddon after its release on the Internet appears
to have been unfounded.
The mass distribution of the easy-to-use program Satan designed
to detect security holes caused an ethical controversy before its
release. Some feared computer hackers and crackers would use it to
find weaknesses they could exploit to break into other people's
computer systems. But a month after its release a survey of
on-line servers, corporations, educational institutions and
government agencies from New York to San Francisco found no
problems. At least nothing yet.

(*****

And for this week, that's all from the Amateur Radio Newsline.

3181. Re: ? Open 440 repeaters in SoCAL ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-17 00:00:00 UTC
From: buffingt@scf.usc.edu
Message-ID: <3pd1v1$npi@usc.edu>
Source record: 246275

In article <3pagu6$79u@uuneo.neosoft.com>, jreese@neosoft.com says...
>
>In article <3pa8vk$267@usc.edu>,
>Do you mean for the benefit of few trustees or few users. There's a big
>difference. If a repeater has many users, it would seem to me there's
no
>difference if that system were open or closed. If there are few users,
that's
>different...

Few Users. Darned few users.

>
>>There are
>>very very few open repeaters there for the use of the casual user who
>>doesn't belong to this or that club.
>
>So what? The lord didn't put people on this earth to build repeaters
for
>everyone to use. If the owner doesn't want the masses using his
station,
>that's his decision.

That's where we disagree. No argument that a trustee has no obligation
to do anything with his or her property. BUT, trustees who refuse to
allow others to use their repeaters simply shouldn't be coordinated. The
frequency belongs to all amateurs, not just a few.

The question is if the channel is being used or not. If
>a closed system is active, the channel is being used. If the system is
not
>active, some sharing might be justified.

Agreed. The problem that you have is that the few active but closed
repeaters in So Cal are really run like businesses, where the trustees
make money off their coordination. Probably money in excess of costs.
Therefore the term "amateur" radio may not be appropriate.

OR, what's worse, is the repeaters that are adjuncts to corporations.
There are a number of repeaters that are only usable by club members, and
club members must be employees of a certain corporation. Here is an
example of a corporation using amateur radio for a quasi-business
purpose. This should absolutely be forbidden.
>
>What I object to is the automatic assumption that open radios are
"better"

>than closed ones. This is total manure. The activity level is what is
>important, not whether it's open or closed.
>
Glad to hear you agree with me. Take a listen on 440 and compare it to
2M. There is no comparison. None. And it is proverbial in So Cal that
it is almost pointless to buy a dual bander, because 440 is essentially
not worth the extra money. Which is just what SCRBBA wants: keep the
average ham off of 440.

A guy I talked to at HRO told me that a lot more single band 2M radios
are sold in So Cal versus other parts of the country for just this
reason. That's just sad.

>> Personally, I don't give SCRBBA many more years. With the FCC's
>>disinterest in ham radio, anyone can put up a repeater, especially on
one of
>>the plethora of mainly disused pairs, and SCRBBA won't be able to do
much
>>about it.
>
>They can't do ANYTHING about it. Frequency coordination isn't
recognized by
>the FCC and nothing prevents anyone from putting a repeater on any
>available frequency. I don't agree with this position, but it is the
way it
>is for now.
>

>
> Gary

I have always hated this misuse of English. When somebody says,
"How are we doing today?", I almost jump out of my skin. I also
despise the annoying 2m habit of interjecting the word "there" at
various inappropriate places in a conversation. Here's an example:

"Well, I'm glad you're enjoying your visit with your folks, there,
and send them my greetings. It looks like your new antenna is doing
the trick, there, and let me know if you need anymore help, there."
I think amateur radio operators wouldn't be considered "hambones"
so often if they started reflecting their intelligence through
their speech.

I'm also fed up, since I'm a newly-upgraded Tech-Plus,
at how new calls are snubbed at some repeaters. I'm almost
tempted not to use my temporary KT designation. Some of these
"old-hat" clowns are simply exclusive and rude.

Well, WZ1V has REALLY gone off the deep end of cyberspace now!
With the help of Rob Bellville N1NTE, the North East Weak Signal group
VHF-SHF club now has a World Wide Web page up and running. The URL is:
http://www.ultranet.com/~bellvill/news.html
Bear with me as it is still under construction, but I've got news from
our club, the upcoming August Eastern VHF/UHF Conference,
general interest VHF-SHF info, and some pictures up and running.
I haven't decided whether to create a subset of vhf oriented links
on our page or just include them with Rob's general interest Ham
links. Everyones' comments will go a long way in helping me make this
a first class VHF-SHF Web page, so please do!

I have just purchased a Kenwood 530 tranceiver. A friend and fellow ham has a Kenwood 520. After reading the owners manual we find that it gives only enough information on operating the rig to get the final stage tuned without a melt down. It seems to me that there must be thousands of these old radios out there and it seems that someone would have compiled an article (or volume) of tips and tricks for operating these rigs. If anyone could point me in the right direction I would appreciate it.

3187. SPECIAL EVENT: Mt. St. Helens

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-17 00:00:00 UTC
From: ki7zd@coho.halcyon.com
Message-ID: <3pbhu6$171@news1.halcyon.com>
Source record: 246331

SPECIAL EVENT/MEMORIAL:
(Fifteen year anniversary of the Mt. St. Helens eruption)

In may of 1995, KI7ZD (Randy Seacat), KJ7GK (Mark Tapper), along with other amateurs, will be operating a station in honor of the two amateurs, and 49 other people who parished in the eruption of Mt. St. Helens in Washington State 15 years ago. These amateurs were monitoring the volcano when the gigantic blast took place, and were unable to escape. The station will be signing KI7ZD, and operating in the middle of the general phone sections of the 80,40,20,15 meter bands, and the novice phone section of 10 meters as conditions permit. Also, CW operation will take place on or near 3.700 mhz and 14.035 mhz. FM simplex on 2 meters will also be offered on 146.580 mhz.
"We will operate a limited station on the 18th and 19th of may, and a full 36 hours of operation will take place over the following weekend (20th-21st)"
For more information about this event, send a request to:

ki7zd@halcyon.com

If you're only 41, then you've grown old before your time. The fortys are the prime of life - just think how productive you could be, advancing the state of the amateur radio art. Instead you spend your time defending an obsolete communications mode that will never again be more than a hobby (alongside buggy-whip manufacture) and resting on your sparse laurels.

I'm a year older than you, and I've been a licensed ham longer than you. I've built ham equipment from the point of bending the metalwork and punching the tube sockets up to writing firmware for imbedded microprocessors and maintaining the worldwide ham IP network. I do satellite communications, video, high-speed digital, and spread-spectrum. I've had papers published at amateur radio conferences and have been the author (or co-author) of several standards documents for the Internet. The very news you're reading is transported via a protocol that I co-designed.

And I expect to do more before my time comes.

What's your excuse for not contributing to, or even keeping up with the state of the art? You don't know chips, you don't know digital communications (except for manual on/off carrier keying), and you don't seem to know modern design and construction techniques.

Too lazy or too stupid?

Jeff, if you can't make a positive contribution, please go away.
- Brian

: loss for all U.S. hams, after a 7 year battle.

: Steve London, N2IC/0
: n2ic@dr.att.com

Steve is right on. PRB-1 has been pretty watered down by appellate
decisions in CA as well. (Good old Howard vs. Burlingame...) For
those of you who enjoy yelling at the league...uhm...they HAVE asked
FCC to restate PRB-1 in a form with more teeth. Sorry about that ;-)

The FCC is aware of how mangled PRB-1 is. The recent letter for
Ralph Haller to Hempstead(did I get that right?) shows they know
what is going on. My personal opinion is that before the league's
requests get a hearing, the FCC's internal structure has to stabalize.
They've been re-organizing, and re-organizing, and re.... Our problems
with lack of enforcement from FCC probably have their root cause
in this same affliction(again IMHO).

Maybe some say we'll have some help from FCC.....the temperature
in the nether regions will might get pretty cold before that
happens though..

No, the phone is only $25.00 if you get the service that costs
about $50.00 a month. Otherwise the phones are about $300.00 or more.

Well, if you want to get technical about mobile tribanders...you
can't overlook the Kenwood TM-642A. It is a 2M/220 rig that has room on
its display and a port inside for an expansion board in which you can put
a 440, 28, 1200, or 50 MHz module. Its kind of a neat idea. This would
give you a triband mobile.

One of our club members recently completed a series of short articles on
proper repeater usage. Don't know if it will help. Things don't seem to be
too bad here, but they are to the point where a few reminders couldn't
hurt. We have a few using "handle" for "name" (shades of CB). I've only
heard "personal" once or twice (as in "The personal here is Bob") - once
was enough. I've also heard "destinated" (acckkk!), We have a couple of
individuals that go overboard with the Q signals, especially QSL, QTH, and
QRT. The new hams that proliferate this stuff get it from "more
experienced" hams who have these bad habits and can't (or won't) break them.

We'll just have to keep reminding them and setting a good example by own
proper usage, QSL?

Well, time to head to my home QTH, but first we have to QSY to check news
on rec.radio.amateur.equipment. Once I'm destinated I'll be QRT.

BTW, the personal handle here is Steve.

Interestingly enough, the "we" bit has been the subject of periodic
discussion down through the years; I'll have to dig for it, but I
believe that an article on the use (or should I say "misuse") of "we"
on the air appeared in QST in the late '50s. One 75-meter 'phone group
at the time even formed an "I-Net" dedicated to the use of "I" versus
"we."

JL>: I bought my HTX-202 for $189. I wouldn't call that a huge mark-up.
JL>: The HT has worked flawlessly and is considered by many to be one
JL>: of the most solid 2M performers on the market. If you would get
JL>: rid of your bitterness, you might gain some objectivity.

Hi Jim, i also have a HTX-202 and for the most part your correct, but in my case after 18 month's the case started cracking, i handle my equipment with care so it's not like a dropped it or anything. They are stress cracks, they also many times give the famous error and loose all programmed frequencies (By the way this can be cured with a few small beads around the Red battery wire).

The last week a friend bought their new mobile unit, after hooking the rig to a reccomended power supply started smoking the house up, no it did not blow the fuse. RS of course replaced the rig and this one works great with an excelent signal and audio, the audio of course in half of the HTX202's is way to low including mine. I know this is just a minor adjustment but should be correct to begin with.

JL>quality. My main objection to RS is their insistence on logging customers'
JL>phone number suffixes. If this isn't the #1 customer complaint, it must be
JL>high on the list. At least I know the manager at one of our local RS
JL>outlets (the only one I ever patronize, for that reason) who is also a ham.

Jim DONT give them any information except what's needed for the warrenty. I don't ever give them additional info because all that's for is to send you all their advertizing and to sell that list to other manufacturers as a mailing list. Did you ever wonder where all those flyers and catalogs come from when you bought a piece of ham gear.

Or, now some are advertising phones for 1 cent with free activation on
a 1 year service contract. The penalty for early cancellation on the
contract is $10 per month where I live, so for $120.01 you could theoretically
have a phone.

I ended up buying a digital one for my wife. Service provider is giving back
enough credit over 4 months to pay for the digital phone. Still have to
spring for the $35/month for service. Still hope to get her to go for a
no-code license...

Bissette is a mining town in the boonies. The closest repeater would be
either Kenora or Sioux Lookout, Ontario. These MIGHT be reachable with a
beam up high. They are both 2m repeaters. If you need more detailed info
on freq's or distances, I can refer to my map and the repeater guide.

I'm a relatively new ham (3 years) and looked at the 440 spectrum and believe me something has got to change because 2m is choke full of users and the next logical place for hams to migrate is 440 (unless they give us back the lower portion of the 220 band - FAT CHANCE). 1200 is a nice band too, but equipment is much more expensive and there aren't many dual band 2m/1200 radios out there.

With the influx of new hams, something is gonna give and I believe 440 will be a battle ground in Southern California. The band has got to open up. If it doesn't, the only recourse new hams in the community will have is to open up a uncoordinated repeaters. This is going to make SCRBA antsy. After a while hams will take the next logical step, and open up a NEW coordinating committee. If the new group is comitted enough, this will rip open the 440 spectrum and there will not be anything SCRBA can do because it has been the history of the FCC to acknowlege a particular coordinating committee over another.

You (the ham community) have to organize to make changes.

My suggestion to hams that have 440 and want to use the band, but can't use any of the repeaters, set up your own repeaters and form your own coordinating commitee. If you don't want or don't have the resources use the input or outputs to repeaters as simplex channels to talk to your ham friends and gather your own group or club as a local coordinating committe for your own region.

Incidentally, what does it take to form a coordinating commitee?

BUT TAKE HEED, if you do this, make sure you are not interfering with the normal repeaters operations (stuff like nets etc.). If you notice that there is traffic move on to another frequency that is clear.

Hams are tired of the existing set-up on 440. This setup is not adequately serving the ham community and it is up to hams to claim/reclaim their airwaves.

SB QST ARL ARLB053
ARLB053 Atlantic Division awards

The ARRL Atlantic Division has announced its 1995 award winners.

The Atlantic Division Amateur of the Year for 1995 is Kenneth Botterbrodt, WA2CVJ, of Marlton, New Jersey. Ken is assistant section manager for youth for the ARRL Southern New Jersey Section. He has been instrumental in taking Amateur Radio into schools and arranging television exposure for Amateur Radio in southern New Jersey.

The Grand Ole Ham for 1995 is Donald E. Wagner, W2QFC, of East Aurora, New York. He has been licensed since 1934. In the 1935 ARRL Transoceanic 80 meter tests, he had QSOs with two Europeans, quite a feat in those days, especially for a 15-year-old boy. Recently, he organized the Association of D-Day Utah Beach Radio Amateurs.

The 1995 Atlantic Division Technical Achievement award goes to Tim Duffy, K3LR, of West Middlesex, Pennsylvania. A world-class contest operator, Tim moderates the antenna forum at the Dayton Hamvention, and has written on technical subjects for major amateur magazines, including QST. He also is the division's representative on the ARRL Contest Advisory Committee and formerly technical coordinator for the Western Pennsylvania Section.

These awards will be formally presented the weekend of May 20 at the ARRL Atlantic Division/New York State Convention in Rochester, New York.

I thought this thread would be dead by now...but since it isn't:
Visiting S.CA twice since being licensed was enough to convince me of the
sincerity of some of the people involved in this thread- I was told on the few
open repeaters I found (W6TRW, and the Co-channeled repeater in Ventura County)
that some groups have gone (been forced to?) to the extent of changing PL tones
on a daily/weekly basis, with only members receiving the info on when the
switch occurs, and what the new tone is.
Either there are a pathetic number of a##holes that make it their business to
mess with other people's repeaters- or some groups are intent on *owning* their
freq pair.

One solution that I have yet to be discussed, but is suggested by the above is
more heavy resue of the freq pairs (co-channelling) with automated devices to
limit interference. This would obviously be a compromise with the current
has-coordination-er's losing out on their monopoly, and not always getting to
use their machine immediately- but t.s.

Each machine listens to its output freq (hopefully the same output +5 from the
input) for the other machine, before allowing itself to key up. So COR/PL
activity on the input freq *AND* lack of COR activity on the output would be
required for repeater operation. Obviously one system could monopolize the
freq pair- as the other would be dead until the first one unkeys- additionally
joe-ham will think his radio or the repeater is broken- unless he bothers to
check the freq (assuming again he/she can hear the other group's repeater) for
activity *before* keying his radio (a seemingly obvious idea, but often
disregarded by both hams on HF, hams on VHF, and community owned commercial
repeaters).

I forget the hams, and the locations, but somewhere out East a ham placed such
a repeater on the air, uncoordinated (their coordination body was also long out

of pairs) but wouldn't key unless the other repeater was inactive.
Joe-ham-coordination heard someone on *his frequency*- so called out the militia...oops I mean FCC. Their response: 'The new repeater is more in compliance than you are'.
- see 97.101(a) and (b), and many other parts- the gist is that the uncoordinated repeater was more consistent with the notion of 'good amateur practice' and 'making effective use of the amateur service frequencies' without causing harmful interference.

Joe-coordinated-repeater was upset, but he needed to realize (as many others, even here where there are pleanty of repeater pairs, except for 144) that 97.101(b) states clearly: "No frequency will be assigned for the exclusive use of any station."

Didn't someone in South.CA say 'People, can't we all get along?'

There is my $0.02.5 worth (inflation is back!)
Bring on the flames!

3208. Mobile Noise Problem

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-17 00:00:00 UTC
From: weasel@dfw.net
Message-ID: <3pec4p$s53@dfw.net>
Source record: 246352

I have a question to ask, and I would rather ask someone who would know the answer -- this means please don't flame me for being interested in CB's, OK?

Anyway, have two newer vehicles (fuel-injected) which are driving me crazy with noise. It seems to be related to the EFI computer, since it only occurs with the engine running, and does not sound like ignition or alternator noise. Now that I have some free time I will determine if the noise is coming in through the DC side or the RF side. I have been successful with blower motor noise, etc, but this has me baffled. Any suggestions would be appreciated.

Bill...

3209. 50MHz D4 Expedition

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-17 00:00:00 UTC
From: equinox@hades.itl.net
Message-ID: <9505171731.AA00846@hades>
Source record: 246353

Hi VHF'ers,
I have just rxd all the air/hotel tickets for the D4 50MHz trip.
We leave London on May 30th (less than 2 weeks!), stay in Lisbon for the
night, then continue onto Cape Verde the following day.
Operation should commence on June 1st from the QTH of Julio D44BC.

Equipment is: Yaesu FT650 100 watts, with backup TS60 100 watts which will
be left with Julio when we leave on June 14th for future 50MHz operation.

The operators will stay at the Aparthotel in Mindelo, the room/phone number
will be passed out on arrival.

Callsign will be D44BC, locator is HK76MK.
We will also be qrv on HF (especially 28.885MHz) with a TS940 and Alpha kw amp.
Gud luck and pray for Sporadic "E"
Geoff GJ4ICD.

Don't include the [address] field unless the address you want subscribed
is different from the one you are sending the mail from. Subscription
requests that specify an address in this manner have to be processed
manually, and this will delay your subscription request.

3213. Re: 6 meter ms skeds

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-17 00:00:00 UTC
From: Peter Coffee AC6EN <72631.113@CompuServe.COM>
Message-ID: <3pcufq$8k7$2@mhade.production.compuserve.com>
Source record: 246357

I'm thinking of getting on 6 meters. I live in a fairly dense suburb of Los Angeles. Which of the following statements is most accurate?

1) This is a bad idea, since Channel 2 is a major network TV station in this area

2) This isn't a problem, since anyone who really cares about their TV reception has cable

3) This won't be a problem as long as I only run 10 watts or so during TV prime-time hours (say, 8 to 11 p.m.?)

4) This won't be a problem as long as I stay entirely off 6m during prime time

Other? I would really like to hear from 6m operators in suburban Channel-2 areas so I can decide if this would just be a waste of money and a threat to neighbor relations.

3214. Hamcomm Question?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-17 00:00:00 UTC
From: bcieslak@mkelan5.remnet.ab.com
Message-ID: <bcieslak.133.00093F99@mkelan5.remnet.ab.com>
Source record: 246358

I've had the opportunity to use hamcomm and an impressed with the spectrum analyzer feature for tuning....Does anyone know how he utilizes the serial port to do this sort of DSP stuff. How does he determine the freq and amplitude of all those signals? I have a few applications for my amateur built radio telescope I would like to be able to do that with.

3215. Re: Dumbing down?! How could it get any dumber?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-17 00:00:00 UTC
From: Peter Coffee AC6EN <72631.113@CompuServe.COM>
Message-ID: <3pcp4q$2a5$1@mhafa.production.compuserve.com>
Source record: 246359
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

It's fairly common to use call sign suffixes during conversation, giving the full call sign only for ID at ten minute intervals. Please don't take it as rudeness. Since 2m is channelized, calling procedures are a good deal more concise than on HF. Excuse me, I mean since 2m FM on repeaters is channelized. Simplex operation is more like what you're used to from other bands, but even then the use of standard calling frequencies makes for a terser style. "AC6EN monitoring" "KB8APP interim KT" "APP, hi, this is Peter in Torrance, haven't heard you here before, congrats on the upgrade." "Hi Peter, my name is Joel, thanks." And so on.

>Ah, sigh. The Net Cops are just like the OFs on HF; whether it
>be ham radio or the net, there will be the OFs sitting in their
>shack complaining about something

Ye' Gads, and little fishes... Looks like sombody needs to tune their I/O
stage thingy's a tad...

I have a couple of questions and comments for our gathered host.

1) was the posting made from a commercial account? (it was my understanding
that the neticate issue had more to do with using non-com accounts for
business purposes than the use of comercial accounts for business
purposes)
I could of course be wrong.
2) As the net goes fully comercial, how are we (both as net users and
business
people) going to agree what is the appropriate use of bandwidth? I ask
this not as a retorical question, but as a potential user and comercial
maintainer. I've been considering putting my families custom tile
business on the web. So, how am I supposed to advertise our site?
although it might seem like rec.radio.* may be an inappropriate place
to advertise, who knows... We make tile for the Boyscouts, why not
amature radio groups or idividuals who want their callsigns/logos on tile
too. So how does one go about this in a net-tically acceptable fassion?
Isn't a three or four sentance blatant ad. like "would you like to have
your callsign/logo custom and hand made in tile? Check out http://..."
3) What is the neticate for those who get flammed by the Net COPS? I
personally have little to no tollerance for self appointed moral crucaders
of ________ (please fill in the blank).
.... now you can eat your spam, eggs, spam, and spam!

I whole hartedly agree with Dr. Kristin Rachael Hayward's,
hayward@cs.uchicago.edu (WX9T)... "... whether it be ham radio or the net,
there will be the OFs sitting in their shack complaining about something."

EBo --

ps: if you are so upset with the use/abuse of bandwidth, why did you keep
reposting to something on the order of 10 news groups?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 17/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 17 MAY AND FORECAST FOR 18 MAY - 20 MAY

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 95/41

GOES satellite data for 16 May
Daily Proton Fluence >1 MeV: 2.5E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.8E+06 (normal)
X-ray background: B1.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
18 May 19 May 20 May
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 18 May: 95/41

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 16 May
Learmonth 17 3344 3332
Fredericksburg 25 33
Planetary 40 38

Observed Kp for 16 May: 3454 6445
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
18 May 15 Quiet to unsettled
19 May 10 Quiet to unsettled
20 May 20 Unsettled to active
COMMENT: IPS Geomagnetic Warning 14 was issued on 17 May and is
current for interval 17-25 May.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
17 May normal fair fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
18 May normal normal fair
19 May normal normal fair
20 May normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
17 May 24 Near predicted monthly values during local day, with
night-time enhancements of up to 40%.

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
18 May 30 Near predicted monthly values to 20% enhanced.
19 May 30 Near predicted monthly values to 20% enhanced.
20 May 30 Near predicted monthly values to 20% enhanced.
COMMENT: Townsville MUFs: 50% enhanced during local night.
Hobart MUFs: depressed 30% during the local day and near predicted
monthly values at night.
No data available after 15UT from any ionospheric station.

brian@nothing writes:

>If you're only 41, then you've grown old before your time. The fortys(sic)
>are the prime of life - just think how productive you could be,
>advancing the state of the amateur radio art.

I'm currently advancing the state of Mathematics. Amateur radio is
only a hobby for me, not a profession (note the words amateur and
professional are antonyms).

>Instead you spend your
>time defending an obsolete communications mode that will never again be
>more than a hobby (alongside buggy-whip manufacture) and resting on
>your sparse laurels.

If Morse is obsolete so is radiotelephony, etc. While resting
on my `sparse laurels' I am advancing the field of Group Theory (one
of the greatest things about mathematics research is that you can
do your work anywhere - even at the beach!)

>I'm a year older than you, and I've been a licensed ham longer than
>you.

I've almost been licensed for 20 years, but what's that matter?

>I've built...
>I do...
>I've had...
>... I co-designed.

I I I I. If that's all you've done with your life, what a pity.
If I started listing my lifelong accomplishments I'd surely use
more than one paragraph.

If you're profession happens to coincide with amateur radio then
it's expected that you advance the SOTA. Mine doesn't. I'm trained
in pure mathematics. Radios and computers are *just* a hobby for me.

>What's your excuse for not contributing to, or even keeping up with
>the state of the art?

See above. I'm just in it for the fun.

>You don't know chips, you don't know digital
>communications (except for manual on/off carrier keying), and you
>don't seem to know modern design and construction techniques.

<yawn>. But I have a ball building (using point-to-point and
dead-bug styles of construction) and operating my radios.
Now, are you just picking on me or do you also hang out on
r.r.a.equipment and chew out all the appliance operators for
not even owning a soldering iron?

>Too lazy or too stupid?

Ouch! Gee Brian, you're not a very nice person. I bet you kick your
dog, too.

>Jeff, if you can't make a positive contribution, please go away.

I guess I've made quite an impression upon you. Funny though, prior
to this post of yours I can't recall anything you've said previously.
After I log out Net.news is the furthest thing from my mind. You should
practice that, too!

73 Brian, and try to be more understanding of us `amateurs',
Jeff NH6IL

According to my air conditioning man, ants are attracted to electricity.
He claims that in the 35 years he's been servicing AC equipment, one of
the most common electrical problems is ants getting into the contactors.
He made these observations while replacing a charred ant residue encrusted
contactor on my AC system.

I don't know if there is anything to it or not, but I sure use plenty
of ant killer around the AC unit now.

This is also my #1 complaint. I continually make known to the saleperson
that I think RS should not ask for customers' name/phone. Apparently they
are *required* to do this or lose their franchise.
Rane n8reg

I work part-time at a local RS.

I've been told that the folks in Ft. Worth take 10% of the store's
revenue to cover advertising. A large part of that advertising is
the direct mail campaign. If a store didn't have any valid names
and addresses then that portion of their advertising expense would
be ill spent. Stores with a large list of valid N&A get a greater
return on that investment.

I normally run around 95% to 98% in the N&A column. I just come
right out and tell folks "I'd like to send you a flyer that tells
you what's on sale.". I guess they appreciate the honesty.

I purchased an HTX-202 from US Radio in Texas (by mail). I got it for $20 below the local RS sale price, with no sales tax and free shipping. Apparently, US Radio is a company-owned RS franchise or something, and they can beat the local price for any RS product. I'm happy with my purchase, and I avoided any annoyance from my local store. If anybody gets too frustrated with RS salespeople, then they should order from US Radio. I think the quality of their products has improved a great deal from the Archer and Realistic days.

Fuck 'em. Go hang around the local radio store and see if you can
find another repeater listed or some clubs to drop in on.

We have the same type of fools in Los Angeles. Just a lot more of them
due to the basic population density. :)

<BIG snip>

>anyone help me feel that hams are overwhelmingly still friendly?

Joel, I like to believe that's true, but I guess I can't *prove* it. Problems such as you describe are *very* annoying, but the best thing you can do is just try and avoid those jerks as much as possible.

One of the local repeaters now announces periodically that it is a *mobile* repeater, meaning that its primary purpose is to act as a relay point for mobile stations. This was done, I'm sure, to discourage local fixed stations from monopolizing the machine and tying it up for hours at a time. If fixed stations want to ragchew, they should use simplex.

You might consider trying 2-meter SSB; generally a much more benign group, although a few of the stations can be a little pushy when the band opens and they start vying for grid squares. But I've never heard anyone being really nasty, and tend to be pretty accomodating of newcomers.

You mentioned having upgraded, so I assume you meant to Tech Plus - why not give HF a shot if you haven't already? Maybe even grit your teeth a little and try - (gasp!) - CW! Or, maybe you'll find packet or one of the other digital modes of interest.

What I'm saying, Joel, is that there are *lots* of possibilities and orders of magnitude more good hams than bad ones; it's just that the bad ones seem to be very visible and seem to hang out together, which may make it appear that there are more of them than there really are. So, try some new bands/modes, maybe even upgrade still further (which opens a few more possibilities). No need to feel trapped by a handful of jerks on a local repeater.

73,

Paul, K4MSG

P.S. If you decide to try CW, just tell me the band and speed you want to operate and I'll be happy to accomodate you.

Your HT might be "packed with features", but it isn't packed with
the two things you need to carry on a decent QSO: Power, and an
Antenna.

|> Does anybody know how I can deal with situations like this?

Buy a different radio or find another repeater.

If you can get a commercial radio that will also cover ham bands, that will work fine. However, you can't legally do it the other way around. Many ham transcievers can be modified to transmit in other bands, but they are not type accepted by the FCC for use in those bands. It may work technically, but if you happen to get caught, at the very least they will confiscate your radio; you may also be prosecuted and fined. Good luck.

This MUST change. Because 440 is not as used as much as 2m simply because
the repeaters are closed or private. If someone wants to put up another

repeater on the same pair, let them share this closed or private status.

>As for your idea to "just put up our own 440 repeaters",
>my guess is that you are a recently licensed amateur, and that you never went
>through the "repeater wars" of the mid-1970's. Two meters was a band of near
>total anarchy in LA, and has never really recovered. It did not benefit from
>this kind of thinking, and neither did those who wanted to use it, at least in
>SoCal. If I'm wrong about your being recently licensed, I apologize in advance.

I've been licensed a little longer than Scott (not by much) and I don't recall
the repeater wars in the 70s, but do you really see anything that will prevent
this same thing happening on 440? Face it, 2m is crowded you can't put up
another repeater there because most of the band is open and it doesn't serve
the ham community to have another open repeater on the same pair to have the
same coverage. Closed/private repeaters don't share this aspect because they
don't want just anyone using thier equipment. Some of them will scream
bloody murder if they hear a conversation going on "their pair" even if it is
NOT going through their equipment.

>>We really should start a movement (or revolt) and form our own
>>coordination body for 440 (tis legal) and get 440 back into a usable

>up your own movement or revolt. Many of your thoughts are not new, but it
>doesn't pay to __not__ try and change things. Who knows, your ideas may appeal
>to someone on SCRBBA, and some reasonable compomise may be possible.

I've heard cases in which a group of hams who wish to put up a repeater
are ignored by SCRBBA when letters are sent to them. If you want cases
email me and I'll send them to you.

>
>>These people think they "OWN" the spectrum, but, believe me, things are

>keep anyone else out.
>
I would like to see the success to failure ratio of members trying to
get into CACTUS or X-Bar. You can apply but unless you are practically a
blood relative of someone in one of these groups your application will be
rejected.

No - if it doesn't meet the type acceptance requirements, it's not type
accepted anymore.

[snip]
>>
>> Did I get that right? I wonder how many station licensee's know that if
>> someone buys or mods a radio, that violates Type-acceptance in their

>> their station license? Wowser.

Karl answered this correctly - the station licensee may be held responsible if
authorized users under the license operate in violation of applicable rules.
My employer would be at risk if I used my FT470 on a company freq - however in
the case of hams, the FCC would likely go after the user and maybe his ticket
(Amateur License, GROL, whatever) because a licensed operator presumed to know
better.

[snip]
>Things get far worse if by chance the modified non-TA'd radio creates some

>reaction when they find the offending transmitter. Or if you really want
>to tangle with the Feds, guess which agencies you might clobber with a spur
>at 21.4 or 21.6 MHz above a legit amateur transmit frequency.
>

Your above example are the reason we have callsigns. If we are identifying
properly, a search for a spurious transmitter might not even involve leaving

the shack - just look in the book and make a phone call or two. Technically, your examples of trouble look more like receiver image problems to me - not to be blamed on a transmitter. If you're spurious, the problems can show up anywhere - and move around - not just at some multiple of a common IF. You could easily drop that spur on 121.5 or 243.0.

The modifications Amateurs do for RF expansion on most synthesized radios do not make them anymore likely to become spurious when used in the ham bands. Likewise, it's a myth that the same type of mods make the receivers anymore suseptable to IMD.

3241. Int'l Postage Rates, IRC's (Suggestion)

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-18 00:00:00 UTC
From: kebsch@pdb.sni.de
Message-ID: <3pem0e$tn@nanette.pdb.sni.de>
Source record: 246297

Hi,

few weeks ago there was a discussion on the "dx-reflector" (mailing list) about how to use IRC's and the postage rates in different countries. At the end of the discussion few HAM's said it would be very helpful to have a list with postage rates from different countries.

So I have made the offer to collect useful info all about, compile it to a list and post it via the dx-reflector. Because there are many HAM's who have no access to this mailing list but have access to this newsgroup and may be interested in this topic as well I'll post this offer and a suggestion here too.

The main idea is *YOU* provide some usefull information about the postage rates and the subject IRC (International Response Coupon) from *YOUR* country and I'll collect all this info and compile it to a list. Then I'll post this list to the mailing list and to this newsgroup. Please send me all info about postage rates which are of interest for direct QSL-ing.

So please feel free to fill up my e-mailbox (kebsch.pad@sni.de) with all useful information about the postage rates in your country.

Now I wish to describe the format of the list, the format of an entry for one country and show an example for Germany. The goal of the format is to have all useful info in a simple list and the info should be structured in a simple, easy to read format. Please have a reader in your mind, who is not living in your country and reads something about your postage rates for the first time in his/her life.

The format of the document (list) should be:

```
------------------------------------------------------------------------------
[ Country-A ]
[ Info-Block ]

[ Country-B ]
[ Info-Block ]
------------------------------------------------------------------------------
```

An INFO BLOCK should have the information (structured):

(--> That is the info I need from YOU! <--)

Find yourself an Icom IC2/4SRA. it's a single-band HT(varies by the 2 or 4, I bet you can figure out which one transmits where) combined with a wideband reciever (25-950) that covers all modes. I guarantee an SRA will get your indy cars, and darn near everything else you want to hear.

Bad news is that they don't make them anymore (cellular recieve). Good news is that I bought one about a month ago, so there may still be a chance. Good luck.

BTW- here are some of the frequencies from last year

3243. Re: <<< Help R.A.D.I.O. Fight For Your PRB-1 Rights >>>

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-18 00:00:00 UTC
From: mlazaroff@delphi.com
Message-ID: <ZSxfbxa.mlazaroff@delphi.com>
Source record: 246299

Hi Steve,

I think you may have misunderstood my reply to Andy. First, I never said (or meant to imply) that the League doesn't assist in tower cases. I obtained a "PRB-1 kit" from HQ a couple of years ago and I credit it with significantly contributing to a "victory" I won at the time.

What I didn't like about Andy's comment was the way he worded his initial post. To me, it implied that R.A.D.I.O. should not be supported at all and that the ARRL was the only way to go. I disagree, mostly because the League can't fight every battle (we agree on that) and few hams can finance a PRB-1 battle by themselves. I've contributed to funds set up for several tower cases; I think hams really need to stick together on this issue - not only by encouraging the League, but by also helping their fellow hams as they are able when these situations come up. I have met and talked with Mr. Imlay, and I know he does good work but the League (in my opinion) needs to make this issue a top priority and keep it there.

Hopefully someday in the future this type of discussion will be totally unnecessary!

>

OLD GUY W/GREY BEARD: "Dang it, I recollect when RS was up in Boston, and jest one of a whole passel of mail-order _parts_ stores, and about the worst of the lot, at that. Seems they either bought up the competition or undercut 'em, till there warn't nobody left but them. And nothing left to buy but junk."

JT: Yeah, they get strong competition in consumer electronics, to the point where almost anything that's widely available is cheaper somewhere else than RS. For parts, their biggest advantage is that they're convenient; you have to decide whether you can accept the poor quality. For some things, there just aren't enough choices elsewhere...I've got their PRO-2006 scanner. But I've got an Icom HT, consarn it! (Always wanted to use the word "consarn", whatever it means.)

Good points, bad points: everybody's got 'em. Really, if they didn't fill some sort of need, they wouldn't be around (and on every other block in town).

: you all their advertizing and to sell that list to other manufacturers
: as a mailing list. Did you ever wonder where all those flyers and
: catalogs come from when you bought a piece of ham gear.

Someone else replied that RS is now asking only for name and address. There hasn't been a problem lately, as I have been going to a RS store whose manager is a member of our local club. I thought he was bypassing the phone # bit because he knew that I didn't like the policy. Thus, I hadn't realized that there had been a change in policy.

Heck, I get so much junk mail now, what's a few more pieces? My only objection to some of this mail is that the materials used are glossy; slick advertising, but non-recyclable.

I don't mind so much, because I like to get any new info. associated with my interests in ham radio or computers. Unfortuantely, I often get stuff like info on Apple computer products, and I've never requested anything on non-IBM-compatible computers. In fact, by not being on the mailing list for RS, I almost missed the HTX-202/404 sale! It was brought to my attention by a fellow club member, fortunately.

Now phone numbers, even just the suffix, provide more room for abuse. If junk mail arrives, it goes in the trash/recycling. When someone comes to the door and I'm not expecting anyone, I don't answer. But when the phone rings, who knows? Unsolicited calls, or calls at inappropriate times, have become such a problem over the years that we've not only installed an answering machine, but have turned the ringer off. Thus, friends, parents and others who are otherwise welcome to call, have to go through the screening process.

Jim

NEWS RELEASE
Contact: Dick Ross, Publisher, 516-681-2922
For Release: Immediate (May 16, 1995)

CHANGES IN STORE AT "POPULAR COMMUNICATIONS"

(Hicksville, New York) -- CQ Communications, Inc., of Hicksville, NY, which publishes "Popular Communications" magazine, announced two major staff changes today.

Publisher Richard A. Ross has announced that Tom Kneitel, the founding Editor of "Popular Communications" magazine, has elected to take a newly-created position of Senior Editor under a newly appointed editor, Chuck Gysi.

Citing personal reasons for his decision, Kneitel expressed his intent to remain an active part of the popular magazine. In his new role, Tommy will continue to do what he does best and enjoys most - write - while shedding the day-to-day burdens of running a monthly magazine.

Kneitel, K2AES, has been the soul of the magazine since it was first conjured up in his living room in the Summer of 1982. The first issue was dated September 1982, and bore a cover photo shot by Ross in the Kneitel family dining room. Over 150 consecutive issues have since been delivered, every one on time and chock full of great reading for the communications enthusiast. Countless "scoops" are attributable to Kneitel over the years, with letters of acclaim coming from practically every government agency in the United States, and dozens of military leaders here and abroad thanking Kneitel for providing them with

critical information often weeks in advance of their normal sources.

Tommy's "nose for news" has developed over a forty year career as a journalist and electronic communications expert spanning the fields of broadcast radio, broadcast TV, film, CB Radio, Amateur Radio, scanning, shortwave radio, cellular and cordless phone communications, satellite communications, surveillance, survivalist communications, marine radio, pirate radio and military communications.

His new position will enable him to cut back on his daily work load while still allowing him to provide conceptual, editorial, technical, and literary input to the magazine he's been identified with for thirteen years. He'll be working closely with Gysi to ensure not only an orderly transition to the new Editor, but also the continuance of the character and spirit of Popular Communications that have made it a special part of the lives of its 70,000 readers world-wide every month.

Gysi, N2DUP, has served as a contributing editor on scanning topics since shortly after the magazine's inception and has been a professional journalist for 21-years. Most recently he served as news editor of a daily newspaper in the Midwest. He has been writing articles on radio since his days in junior high school and has served as editor of several radio organizations' journals.

Like Kneitel, Gysi also has an extensive knowledge of and interest in the various aspects of the radio hobby and is active in monitoring and/or transmitting on almost all bands from "DC to daylight."

"I'm excited about being associated with 'Popular Communications' in my new role as editor and look forward to learning a lot from Tommy as he continues to be associated with the magazine," Gysi said. "I look forward to hearing from our readers so that we can continue to offer a monthly package that is timely, of interest and is accurate as well as being fair. The readers of 'Popular Communications' are the best resource for our

editors, columnists and writers."

Mr Deignan, you're so terribly witty. It's attitudes like yours that make new licensees feel unwelcome. Ameteur Radio is not your personal clique. Continue to hang around with your OF friends and lament about the 'good ol' days'. The HTX-202 is a good rig at a decent price for someone just entering the hobby. A few years ago, I'd have bought one myself, but I wanted 440 capability. So, I bought a used Icom W2A instead. And you know, it doesn't make it into those distant repeaters any better than does an HTX-202.

As for Joel, who posted the original question, I do recommend finding another repeater. There are more progressive and understanding hams than Mr. Deignan and his ilk.

In order to join either of these groups (Crossbar is a Cactus affiliate) you must be recommended for membership by a current member. Since all members of both groups are control operators on both interties, it's to everyone's advantage to prevent jammers from joining. Given these restrictions the approval rate is pretty high.

Hi,

As an active ham and member of Amateur Radio emergency Services, I work a lot of public service events, severe weather watches and emergency events. To make using an HT during these events, which can last all day, a little easier, I'd like to have a custom earphone made. This would be the type that is used by television reporters that are molded to the wearer's ear and have a coiled cord running down to the HT.

If you know of any companies that do this sort of custom molding, please post a reply here or send mail. I'd appreciate any referalls that can be offered.

73,
Erich Berman

I have one and I LOVE the mike. I can fully control the unit without
taking my eyes of the road, the GPS, The 220 radio, the HF radio, the TNC,
the HP200LX, ...

BUT, the audio out of mine s**k*. I have been told by several others to
get my $$ back.. I am getting together with a friend that has one to try
his mike/my voice.my radio. I called yeasu and they said send the mike to
them. I will wait till I test the other one.

BTW, the pots are too easy to move, I have found the volume down on VHF too
often.

3258. re: Where can I get HAM FAQs ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-18 00:00:00 UTC
From: Michael.Black@juxta.mba.org
Message-ID: <1ba_9505181730@mba.mba.org>
Source record: 246314

kinwai@laukw.pl.my (Lau Kin Wai) wanted to know where to get Ham FAQ's.

One place that FAQ's, be they ham or anything else, get posted on a regular basis is the news.answers newsgroup. If you have access to such a newsgroup, check there. It's worth keeping track of regularly, since a lot of very different topics have FAQ's, and they can be fun and useful to read, even for topics that you've never thought about before. People talk about schemes to make money off the internet, and one way seems to be publishing books about it. Witness the huge section on
Internet books at any decent bookstore. It's sort of a joke, though since other than a few tips to gain access to parts of the internet there are plenty of FAQ's in news.answers and elsewhere that tell you plenty about how to use the internet. The info's free, and you don't end up with information that is out of date as soon as it's published.

The ham Faq's are also archived somewhere, but I didn't take not of where since it's done by FTP (which admittedly can be done by email).

The ARRL has a mailserver that contains the Ham FAQ's. The address is: info@arrl.org

The subject header can be blank or gibberish. In the body of the message put:

```
help
index
send HAMFAQ1.TXT
send HAMFAQ2.TXT
send HAMFAQ3.TXT
quit
```

The "help" command gets a text file that tells you about and how to use the server.

"Index" sends a text file of what's available on the server.

The next three lines send the 3 parts of the Ham FAQ. They are about 27K, 50K, and 34K. The index is also a fair size. You might not want to send for all of these at the same time, depending on where you get your email.

The "quit" command tells the server to ignore everything that follows in case you have a signature or whatever.

There are plenty of interesting text files on the server, and it is well worth checking out by all those interested in radio.

The ham FAQ's also get posted to the specific newsgroups, I thought, but I haven't seen them. I do know that there is a FAQ, though it's called a guide, that is an introduction to the personal radio

newsgroups. It was just posted again this past week; perhaps you
can catch it.

I hope this helps.

ARLP021 Propagation de KT7H

Solar flux was up slightly last week over the previous week. Stable conditions have been reflected by a declining A index. Activity should be heading down for the near term, with flux bottoming in the low 70s between May 17 and 20. After that the flux should peak in the 90s following June 1.

Sunspot Numbers for May 4 through 10 were 12, 14, 22, 12, 13, 13 and 26, with a mean of 16. 10.7 cm flux was 70.6, 72.9, 76.4, 77.6, 78, 77.8 and 77.8, with a mean of 73.

This week's path projection is to Zaire from Atlanta, Georgia.

80 meters should be open from 0030 to 0430z, and 40 meters from 0000 to 0500. Check 30 meters from 2300 to 0300 and again around 0500 to 0630. 20 meters should be good from 2000 to 0100, and on most days 17 meters should be usable from 1630 to 0000.

Subject: Radio in Chevy Blazers

Hello, this is Harry, WB9ZAI. I have a 1993 Chevy Blazer S-10 and have experienced problems installing hf radios in it. Does anyone have any experience or recommendations on the proper installation (cable routing, electric connection,etc.) for HF gear. I currently am using a Kenwood TS-50 and a SCG Super Tuner with a 20M HamStick antenna. Problems bands are anything above 20M.

Any observations or thoughts would be appreciated.

73, Harry.

As we've all found out on the air... hams have much more to offer than a quick 59(9) and a discussion of the rig and power.

One way to find out other interests is to check out the www page at

http://www-vms.uoregon.edu/~milewski/hamsonweb.html

It contains links to pages BY hams but pertain to interests OTHER than ham radio (of course, some ham radio stuff creeps in these things - but by and large, the interests represented span quite a bit of territory). For example, the herpatology page - with plenty of reptilian pictures!

If YOU are a ham with a page or know of a page by a radio amateur which deals with interests primarily OTHER than ham radio... e-mail your call, name, city, state (country), URL and a short description of the content to: milewski@oregon.uoregon.edu and I'll include it in the listing.

>these newsgroups got started. They certainly don't serve a purpose
>because nobody ever uses most of them and their names are totally wierd.

You have to understand the difference between the Usenet Big 8 and
other hierarchies, specifically alt.

Here we have votes to determine before group creation if there's
enough interest, and an individual (tale) to send newgroup messages
that will be honored automatically.

In alt, there are no votes, anyone can send a newgroup message, and
any site can choose to honor it or not.

Nobody's BOUND by Tale, here, but I guarantee you a new rec group
will get at least 50% propagation, especially if it's part of an
existing subgroup such as rec.radio.amateur. A new alt group will
be extremely lucky to get 35-40% propagation.

And the more silly alt groups that get created, the more this
divergence occurs.

The flip side is that the big commercial sites (e.g. AOL, Prodigy,
Netcom <g>) newgroup practically everything that comes down the pike,
so that a large percentage of Usenet readers do have access despite
low propagation.

>switch occurs, and what the new tone is.

Changing PL tones is pretty much ineffective because almost all radios now
have the ability to decode or seach for the PL tone. Some individuals
have taken measures to modify their radios by adding a digital PL in an
attempt to twart unauthorized use.

>One solution that I have yet to be discussed, but is suggested by the above is
>more heavy resue of the freq pairs (co-channelling) with automated devices to

Equipment like this would certainly be beneficial in crowded areas. Repeater
owners were never meant to have a monopoly on frequency pairs. Implementing
this device into a repeater (aside from the technical problems) would more
difficult because repeater owners may not wish to put such a device.
I believe that freqency pairs can be shared without having such a device.
One nice example that can be seen is on the pair designated for testing
in SO CAL. That frequency was designated for future repeater to testing
purposes, but some folks set things up and never left the pair. Now there

must be 3-4 repeaters that use that pair with extensive overlapping coverage
and they all get along.

>Each machine listens to its output freq (hopefully the same output +5 from the
>input) for the other machine, before allowing itself to key up. So COR/PL

>Joe-coordinated-repeater was upset, but he needed to realize (as many others,
>even here where there are pleanty of repeater pairs, except for 144) that
>97.101(b) states clearly: "No frequency will be assigned for the exclusive use
>of any station."

If this is true then I'm rather curious to why aren't there more uncoordinated
repeaters in SO CAL in 440. I believe the airwaves can be shared with other
repeaters without any serious adverse effects to the given coordination. The
problem is the organization here in SO CAL keeps an iron fist hold so that
it is impossible for a new kid in the block to open up a repeater. Right now
I'm observing a group of folks who want to open up a repeater on 440. So
far 3 letters have been sent to SCRBBA (3 different addresses listed for this
organization) and so far they haven't gotten a single reply from them in
a over a month now. I suspect SCRBBA may be ignoring this group because
they are not part of the "good 'ol boys". If this is so, SCRBBA is not
serving the ham community and the ham community should consider not to
recognize SCRBBA as the coordinating committee for SO CAL. Things don't
get that bad, because for a while SCRBBA has done a good job. But they
need to offer some answers to people they are suppose to be overseeing.

When I originally started this thread, it was with the hope that there were some 440 repeaters out there that had escaped my attention. Thirty followups and two e-mails later, I received exactly *two* that answered the original question. It was not intended to open old wounds, but that's what has happened.

The education has been interesting, however. I was not aware of the situation with "paper repeaters" here in California.

If you examine the context of my message you will find I said nothing about
whether or not an organization is worthy of a frequency pair. What I did say
was that membership to some clubs or organization are so exclusive that most
members who apply for membership are turned down. The post I was replying to
stated that all one had to do to get into a closed repeater was simply
contact the organization. I simply said that anyone can apply, but they don't
necessarily accept you.

>It is unfortunate that the new hams aren't able to put repeaters on the air on

>
>The only crime the users of 450 are guilty of is that they were around 20
>years ago when all this started. That's the breaks.

I am a user of the 450 spectrum but according to the repeater book, I'm only
allowed to use a very small portion of that spectrum. Sure 20 years ago they
may have been here when it all started, but that was 20 years ago. The
ham community is not what it was 20 years ago. I respect the property rights
of repeater owners, but they don't own the frequency. If I wish to talk
simplex on a frequency that their machine is on, I should be allowed as long
as I don't cause interference it shouldn't be a problem. Some repeater owners
are guilty of hogging the frequecy pair because they feel they
own the frequency. They won't admit to it, but the results are the same.
When your presence is heard they try chasing you off the frequency first

verbally and if that fails, then they key the repeater over the your transmission.

Currently there is only ONE frequency dedicated to simplex on 450 and in SO CAL this frequency is often busy.

3266. US Island Awards May 15th Bulletin

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-18 00:00:00 UTC
From: johnn0isl@aol.com
Message-ID: <3ph0ik$et2@newsbf02.news.aol.com>
Source record: 246322

```
**************************************************
I United States Islands Awards Program (US I)
S "ISLDX" packet bulletin
L c/o John Reisenauer, NL7TB D
Rt. 2 Box 2161, Benton City, WA 99320 X
**************************************************
May 15, 1995

A funny thing happened on the way to the island...well, not so

funny then as John, KG7RS, reports "the starter rope broke on the
boat motor...". It gets more comical, had John made it to Rabbit
Island, he would have discovered "no island". It was completely
submerged! As if poor propagation and lousey weather wasn't bad
enough.

Plan on participating in the 1st Annual American and Canadian
Islands Contest September 23 and 24. US I will offer our attract-
ive "red, white 'n blue" certificate with a unique endorsement
sticker to commemorate this joint-venture. We have big plans for
this contest to be an annual event and to promote island collecting
between two great neighboring countries! Both US I and CISA
(Canadian Islands Awards program headed by Garry, VE3XN) hope to
sponsor wooden plaques next year for the top W and VE scores. The
US I BOD will be active from islands during the contest (John and
I will operate KC7KHU from Camano Island, WA-03S and NA-065).
Remember, the contest is open to "anyone anywhere"- your support
is very much appreciated.

Don, KB5IQJ/3, sent logs in to qualify his Packers Island op-

eration- PA-01R. Lots of countries worked OM! Our station was
able to work N0ISL on Island of Peace (MN-01R) in the heavy QRM
on 20 meters Saturday (May 13). Hope lots of you folks got to work
John who was on "battery power". Band condx weren't much better the
following day when John and I were on from Clover Island (WA-052R).
Our first contact was with our long-time Yukon friend Bill, VY1AU.
Bill is heading south on holiday and will activate some VE and W
islands enroute this QTH. One of our last contacts was with another
friend, Rick, N6IV/KL7 on Douglas Island, Alaska (AK-18S). Rick
men-
tioned he worked John, N0ISL (MN-01R) shortly after we did. I bel-
ieve that to be the first US I island to island QSO. Good show
guys!
```

N6IV, KF6XC and NL7TB (Rick, Larry & John) should have their camp set up and be operational as "VY1ISL" from a Yukon island around 2000Z June 30th. They have several islands to choose from but will take the closest one to shore (I told them to get a bigger raft!). The "Island Warriors" will be on for 24-30 hours before heading for Alaska's Barren Islands. They hope to activate Ushagat Island (NEW for US I and IOTA!) starting around 0200Z July 4th. Wish them good weather and propagation.

Thanks to all who responded to my packet "membership invitation" of
last week. To get on the US Islands ARC roster all we need is your name/address, call (optional) and if you're an ARRL member or not. Membership is free and open to "anyone anywhere". We're in the process of applying for ARRL affiliation.

Our packet BBS was hit by lightning a couple days ago and will be down for some time. We will rely on N0ISL and KG7RS, both US I SC's with packet capability, to keep you updated on US I activities.

Lastly, if you live on a state island or know someone who does, please contact us to qualify your island. It's very easy to do and you'll enjoy the fun of "putting on your very own island". We're very interested in your future plans to operate from state islands also. Info on US I is available by writing to the above address with
a SASE. 73, 88 and happy island collecting!

Claire, WL7MY
Secretary, US Islands ARC

John Douglas, N0ISL
AX.25 N0ISL@KZ7I.#MSP.MN.USA.NOAM
I'm in Minnesota only because I must be somewhere!

3267. Donations Wanted

Newsgroup: rec.radio.amateur.misc

From: becker@shell.portal.com
Message-ID: <3ph82e$dvg@jobe.shell.portal.com>
Source record: 246323

Those who may have some literature, books, or excess gear and are willing to donate it in a worthy cause:

The breakup of the Soviet Union has given the Republic of Estonia a new level of freedom but not much infrastructure to exercise it.

There is, however, an active group of hams in Estonia who are building an organization to train and license new hams. This program is deemed a national priority to provide emergency communications services. (Estonia's Red Cross has even less equipment). When they have a working program, it is expected that the other Baltic nations, Lithuania and Latvia will adopt it.

The biggest need is for training materials, (old ARRL license manuals etc), and gear. Old gear is fine, as it gives them a chance to repair it and learn electronics. (No junk as you don't want them to be too disappointed).

If interested, please contact:

To all radio amateurs

SB DX ARL ARLD027
ARLD027 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, Jose, CT1BOH, Joe, NJ1Q, The 425 DX News, Bob, WB2YQH, The 599 DX Report and Contest Corral from QST. Thanks to all.

PRATAS ISLAND, BV9. This one will be activated on May 25 by an international group signing BV9P. The IOTA designator is AS-110. Martti, OH2BH, may be one of the operators.

VIETNAM, XV. Rolf, SM5MX, should be on the air soon as XV7SW from Hanoi. Check 1827, 3505 and 7013 kHz for his CW. QSL to Rolf T. Salme, Embassy of Sweden, Box 9, Hanoi, Vietnam.

ANGOLA, D2. D2EV was heard on 14213 kHz around 2300z. QSL via DL3KBQ. Valy, YO3YX, will be on the air as either Y03YX/4U or D2YX for the next six months. Check the low end of the CW segments.

SOUTH COOK ISLANDS, ZK1. Masa, JE1DXC, is now on his third Pacific DXpedition, operating CW, SSB and RTTY on 80 through 10 meters. He will be on Raratonga May 18 to 24. Then it's off to Fiji. QSL via JE1DXC.

FIJI, 3D2. Masa will sign 3D2XC May 26 to 29 and plans to be in the CQ WW WPX Contest. After the 29th he will move on to Tuvalu. QSL via JE1DXC.

TUVALU, T2. From June 1 to 6, Masa will be on as T20XC. Before returning home, he returns to Fiji for more operating as 3D2XC from June 7 to 11. QSL via JE1DXC.

MARKET REEF, OJ0. OH0RJ, OH6EI, OH6LI, OH6LK and OH8PF will be active May 25 to 29 on all bands, including 6 meters. This Finnish team will be in the CQ WW WPX Contest. QSL via OH6LI, Jukka

Klemola, Aarontie 5, 31400 Somero, Finland, Europe.

ITU HQ GENEVA, 4U. IK1CJO, IK1QBT and I1YRL will activate 4U0ITU on May 20 and 21 with CW, SSB and RTTY.

LIECHTENSTEIN, HB0. The Wiesbaden Amateur Radio Club will be active June 1 to 18, with members signing HB0/DA1WA on all HF bands with CW and SSB. US amateurs QSL via KN6G with SASE. All others QSL via DJ0LC with IRCs. Manfred, DL8SET, will be on the air as HB0/DL8SET May 24 to 28.

RECEPTION REPORTS REQUESTED. HF beacon station CT3B is now operating from a new site. It is part of the international beacon network on 14.100 MHz and transmits at minutes 6, 16, 26, 36, 46 and 56 every hour. Send signal/reception reports via packet to CT3HB at CS3MAD.CTMD.PRT.EU or via postal service to ARRM CT3HB, PO Box 4694, 9058 Funchal Codex, Madeira Island, Portugal.

BAHAMAS, C6. Bill, KM1E will sign C6AGN until May 24 from Green Turtle Cay, IOTA NA-080. Check the IOTA frequencies.

THAILAND, HS. The Radio Amateur Society of Thailand has been authorized to use the call sign HS50A for one year beginning this month to celebrate the 50th year of accession to the throne of King Bhumiphol Adulayadej, HS1A.

QSL NOTES. Jose, CT1BOH, reports anyone needing QSL's for PY0FF, PY0F, HC5M, 4M2BYT, P40E, KP2A, CT3T, CR2A, CQ WW SSB and CW contests for 1989, 90, 91, 92, 93 and 94, contact him on Internet as CT1BOH at TELEPAC.COM.

GUANTANAMO BAY, KG4. Ken, KG4MN, aka VP9MN, has been QRV since May 11 and should remain on Cuba for the next two years. He likes the WARC bands and CW. QSL via WB2YQH.

THIS WEEKEND ON THE RADIO. The 50 MHz section of the ARRL Spring Sprints is from 2300z May 20 to 0300z May 21. Exchange grid square locations. For more info, check pages 123 and 124 in March 1995 QST, and page 87 in April 1994 QST.

The 46th annual Armed Forces Day will be on May 20 and 21. Full information regarding a variety of events can be found on page 138 in May QST.

The Michigan QSO Party, sponsored by the Oak Park ARC, is from 1800z May 20 to 0300 May 21 and 1100 May 21 to 0200 May 22. Exchange signal report, QSO number and state, province or DXCC country. Michigan stations will send their county in lieu of state/province/DXCC country.

>Ridiculous comparison. CW is one of the top two modes on HF, yet
>I doubt a horse is one of the top two methods of transportation.

According to a blurb I read in Scientific American, there are more horses in the US today than in 1900, yet we don't maintain a horsemanship requirement in our driving tests. Somebody is riding those horses, but the government seems to think that if they fall off it's on their own heads, and not something of concern to the rest of us. We simply assume that if they choose to ride horses, they'll learn how, and for those who do not choose to ride horses, horsemanship skills are irrelevant to navigating the roads. A horse is slow and obvious, so it's easy to steer around one without the necessity of knowing how to ride one. Sounds familiar doesn't it?

>problem is with RF getting into my keyboard and causing it to generate
>spurious characters. I've put ferrite beads on the cable and installed
>caps/coils in series with the wires, but still occasionally have the problem
>at certain beam headings, especially on RTTY.

I get them from any of several local clone emporiums. It says on the box
"JIH CHANG ENTERPRISE CO., LTD, TIAWAN, REPUBLIC OF CHINA". The box
also says that they are made in Arabic, Chinese, French, German, Hebrew,
Italian, Russian, Spanish, Swedish, U.K., U.S., and OTHER formats, so it
would seem that they should be widely available.

I've never experienced an RF ingress problem, but then I don't tend
to let a lot of stray RF float around the operating position, bad for
the health they say.

One thing to add here. Yaesu changed that device and ripped out the fan.
They charge the same for it and all they added was an "A" suffix. I'd
pick up a 486 heatsink/fan combo and bolt it on the back. Might look funny.
It might even sound funny if you stick your finger in the fan while you're
transmiting. ;)

Cheers,
David

>The root cause of RS's problem is that they don't want to pay the
>prevailing wages for good, knowledgeable people. The expression
>"you get what you pay for" applies both ways.

I've got another story. It's short but pointed. A few month ago, I moved into a new appartment. I needed a way to get an antenna to hang from the balcony of the appartment above me. I figured that a twin lead Jpole would do the trick nicely. "Fine, 75 Ohm twin lead can be found almost anywhere." I said to myself, "I'll try RS. They're sure to have some."

Minutes later, I was shocked back to reality. The kid behind the counter hadn't even heard of 'Twin lead'. I tried to see just how lost this guy was so I asked, "Do you have any co-ax?"

"Huh?" was his pithy reply. Try again, "You know, the round wire..." Ahh, a small light comes on. He lifts his arm like the ghost of christmas past and indicates the back of the store. Right, I just came from there. I *did* look before I asked. I simply assumed that I missed it and needed guidance. *bzzzzzz*

Back I went to the rear of the store. After a minute or so of poking around, I found a 6ft. twin lead spade to spade cable. There was no way that I was paying 2.99 for 6ft of twin lead, so I carried it up to the counter as an example of what twin lead looks like.

Mr. Wizzard claimed never to have seen it's like and was sure that they didn't have any in the store. Fine.

A few minutes later, I walk out of the nearby hardware store with 20 ft. of twin lead and I didn't spend over a dollar. *sigh*

What all this leaves me wondering is: what puts the "radio" in "Radio Shack"?

Cheers,
David N0YMV

CHRIS CONKLIN (N0PAV) (conklic9391@cobra.uni.edu) recently wrote
in <1995May17.214438.43493@cobra.uni.edu>:

: Either there are a pathetic number of a##holes that make it their business to
: mess with other people's repeaters- or some groups are intent on *owning* their
: freq pair.

Over ten percent of all US amateurs are in California. Over half of them are
in SoCal line of sight of all the six to eight thousand foot radio sites.
Two hundred mile coverage is not uncommon even with hand-helds.

: One solution that I have yet to be discussed, but is suggested by the above is
: more heavy resue of the freq pairs (co-channelling) with automated devices to
: limit interference. This would obviously be a compromise with the current
: has-coordination-er's losing out on their monopoly, and not always getting to
: use their machine immediately- but t.s.

: Each machine listens to its output freq (hopefully the same output +5 from the
: input) for the other machine, before allowing itself to key up. So COR/PL
: activity on the input freq *AND* lack of COR activity on the output would be
: required for repeater operation. Obviously one system could monopolize the
: freq pair- as the other would be dead until the first one unkeys- additionally
: joe-ham will think his radio or the repeater is broken- unless he bothers to
: check the freq (assuming again he/she can hear the other group's repeater) for
: activity *before* keying his radio (a seemingly obvious idea, but often
: disregarded by both hams on HF, hams on VHF, and community owned commercial
: repeaters).

This receiver lockout system was a condition of license in the broadcast
remote pick-up service many years ago. Certain paging licensees also had
to have lock out receivers. This only works in a radio service where the
users are willing to time share the frequency. I used to see paging lock
out receivers with no or a vary bad antenna. The broadcasters worked
together to share the limited spectrum, while the cut throat pager
companies bent every rule in the book. Hams by their nature do not share
time on a voice repeater. We are lucky to keep from doubling on our
own repeater durring the comute home.

: I forget the hams, and the locations, but somewhere out East a ham placed such
: a repeater on the air, uncoordinated (their coordination body was also long out
: of pairs) but wouldn't key unless the other repeater was inactive.
: Joe-ham-coordination heard someone on *his frequency*- so called out the
: militia...oops I mean FCC. Their response: 'The new repeater is more in
: compliance than you are'.
: - see 97.101(a) and (b), and many other parts- the gist is that the
: uncoordinated repeater was more consistent with the notion of 'good amateur

: practice' and 'making effective use of the amateur service frequencies' without
: causing harmful interference.

Would you like to be a user on one of these restricted systems? I think not.

: Joe-coordinated-repeater was upset, but he needed to realize (as many others,
: even here where there are pleanty of repeater pairs, except for 144) that
: 97.101(b) states clearly: "No frequency will be assigned for the exclusive use
: of any station."

Repeater coordinators do not assign exclusive frequencies, they recommend
frequencies within their band-plan for your use. It is then up to you to
get agreement from the other coordinated repeaters on that frequency.
Part97 is specific in this regard.

: Didn't someone in South.CA say 'People, can't we all get along?'

Rodney King ;-) he made millions saying that....

: Public Policy Masters Student: University of Northern Iowa:
: Amateur Radio voice: 444.650Mhz n0pav/rpt

Looks like you were forced to go up to 440 ;-) Well that happened here in
California well over ten years ago. Thats why I operate on 440. Would you
believe all three hundred 1280 MHz repeater frequencies have been
coordinated in SoCal? 1.2 GHz is the new active repeater band in SoCal!
Works better than the other bands, especially from six thousand foot
mountains! No intermod, no pagers, and a lot of fine motivated amateurs.

Here in northern california where we still have 1280 repeater frequencies
available, there are now two 2.4 GHz repeaters. Those guys are really
having Fun! From a thousand foot site one has 50 mile mobile coverage.

About the time Roger gets out of law school we all will be tired of his
ranting about the exclusive SoCal 2.4GHz digital repeaters using secret
bit streams.....*.....*.....+.....

Are we having Fun yet?

Bob

> the damage, the Post Office?
> Makes some sense to me.
>
> Mine have arrived looking just as good as they did when they were in
> the plastic bag.
> 73, doug

Actually, I didn't "complain" to the League - I merely asked if there was any chance of a replacement copy. Yes, I have replaced to the USPS, but the response was one of "well, we're sorry... most of the time it works.. etc", and of course, the damage was already done, so there's nothing USPS could do about it. We do get plenty of other magazines delivered in this fashion without incident, so I guess I just got unluck with this (and a previous) copy of QST.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Is it me? I've only been a "Tech Plus" since May 13, and I'm already wondering why I upgraded. I bought an HTX-202 as a cheap, convenient way to get back into the hobby, but I'm thinking that that isn't good enough. I was listening to the "Rude Repeater" (147.14 - Royal Oak, MI) last night and heard something like:

Ham 1: "I think there was another station trying to break in"
Ham 2: "It was really broken up. It must be an HT."
Ham 1: "A 'wanna-be'."
Ham 2: "Whatever."
Ham 1: "Actually it was kind of fun swinging my beam around to try and see which direction he was broadcasting from."

I only gripe here because I didn't feel like getting in an argument on the air. Now I get the impression that some "ol' boys" don't consider you a real ham unless you put 1500 W into a beam on your roof. My question is if they have that kind of equipment, why are they on a repeater at all? I thought repeaters were kind of tailored for HT and mobile usage. I bought an HT because I can't afford much else right now and live in an apartment. My HT is packed with features, and I'm having a hard time getting QSO's that allow me to explore the features, range, and performance of the HT. The same three clowns dominate the above mentioned repeater almost all of the time, constantly making smarmy, sarcastic remarks to each other as if they were arguing siblings. I'm wondering if any of them have a job. In their minds, I think HT users are the equivalent of 'CBers', but I feel that they are the unprofessional ones.

Does anybody know how I can deal with situations like this? Can anyone help me feel that hams are overwhelmingly still friendly?

> marine radio license.

Sorry, but I bring bad news. Radios operating in the Marine and Commercial/Public Safety bands must be "type-accepted," in other words....approved for that use by the FCC.

Ham radios capable of changing frequency from the front panel controls are not type accepted....regardless of the quality of design and construction.

The radios CAN be very simply modified to transmit outside the ham bands....mainly for the international market where FCC Type-Acceptance rules don't apply. Lots of hams do it....a few get in trouble. I'd suggest that as a new ham you avoid the practice until you have time to get a few more opinions....and can then make an informed decision.

Put me down as the first vote AGAINST modifying....but talk to other people.

Oh...and thanks for asking. That's the first sign of a new ham who's going to be a credit to the hobby.

3283. HELP, army surplus 6m handie align?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-18 00:00:00 UTC
From: rpmackin@ashley.business.uwo.ca
Message-ID: <3pfhs6$ns6@falcon.ccs.uwo.ca>
Source record: 246375

I bought a pair of 6 metre radios at Dayton.
They are Army surplus units, the rx clips on a helmet, and the tx is handheld
with 2 channels.

Receiving set, radio, AN/PRR-9
Transmitting set, radio, AN/PRT-4 (or 4A)

I know what formula to use in re-crystalling the units, but I need alignment
info.
The book makes reference to a service instruction guide;

TM 11-6625-937-12, for the alignment procedure.

I also would like to know if there is a easy way to allow a
carrier squelch to operate in the rx unit,
it currently has either PL(150Hz) or open speaker modes.

Any help would be greatly appreciated.

Thanks!

I suspect that when he does, he'll apply for a jop with Canter and Siegel.

Has anybody modified his 2m Ht to receive between 50MHZ
and 1GHZ? If you have done it, plese let me know the HT's brand
name and modification procedure. I will appreciate for the rest
of my life.

Thank you in advance.

Assistance needed.

The CNIB Amateur radio program would lie to know if anyone has or has ever heard of a talking SWR. meter. Wether this device is currently being built or adapted please let me know.

all responses to be directed to me.

I was waiting for someone to name names.

Cactus has 13 repeaters on 8 frequencies in southern California. Crossbar has
6 repeaters on 5 frequencies. According to the southern California band plan,
there are 198 repeater pairs available between 440 and 450.

There are 412 members of Cactus. I don't have membership data on Crossbar.
Would anyone like to tell these 412 people that the repeater club they support
isn't "worthy" of a frequency simply because their systems are closed?

It is unfortunate that the new hams aren't able to put repeaters on the air on
2 meters or 450, but the fact is there are places where channels are
available. True, equipment isn't as easy to scrounge at 1200 MHz, but it can
be done. All it takes is commitment and a little effort.

The only crime the users of 450 are guilty of is that they were around 20
years ago when all this started. That's the breaks.

>Holy buckets! Jackbooted thugs! Who did you QRM Gary? JY1?
>You been hanging around with Wayne LaPierre again?

Sadly, some of our government's minions are more and more adopting
the guise of jackbooted thugs. I can remember a time when federal
agents were polite men in coat and tie who came knocking at the door,
but today it's more likely that they'll be ninja clad and come in the
door via the heel of their boot after first throwing in a grenade.
If you're lucky, they'll only curse you and physically abuse you,
if you aren't, they'll just shoot you down. And when they belatedly
find they have the wrong house, they never want to clean up the mess.

I never thought I'd see the day in this country where the government
agents were the ones wearing masks, but I've seen it (Atlanta Red Dog
Squad), and it's no prettier here than in any despotic third world
country. Men who have to hide their faces behind masks have no business
working for *my* government.

3291. Need Advice, GaAsFET Z-Match

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-19 00:00:00 UTC
From: Richard Nacamuli <headwave@access2.digex.net>
Message-ID: <Pine.SUN.3.91.950519193237.9586B-100000@access2.digex.net>
Source record: 246133

I am currently building a low-noise receiver in an attempt to
detect rf/microwave emissions from the human brain. The equipment will be
very similar to a total-power radiotelescope.
I want to use HP 10136 GaAsFET's in the preamp. I have
S-Parameter data from the catalog and I am using it along with the
equations presented in Bill Troetschel's article in Chapter 6 of "The ARRL
UHF/Microwave Experimenter's Manual". My problem is this: for much of the
data, in the lower frequencies, the equations don't work. I get negative
values under the radical. The equations also apparently show this transistor
to be conditionally stable at the lower frequencies. Is there a more
generalized form of these equations that I might use in this situation?
Is there any literature that I could obtain relating to impedance
matching conditionally stable devices using S-Parameters?
Also, the equations presented in the article calculate input or
output impedances assuming that the opposite port is matched. However,
for optimal noise performance the device is not Z-matched and may be far
from it. Are there equations that one may apply to derive impedances from
S-Parameters given an arbitrary termination of the opposite port?

Rich, KB2TSZ

Here is a summary of news items covered on edition #112 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 26-May:

1. Atlantic Division to Present Awards at Rochester Hamfest
2. ARRL Headquarters Gets Phone System Upgrade, New Phone Number
3. Armed Forces Day Crossband Operations This Weekend
4. "This Week" Announces Return to Satellite, "Tech Talk Network"
5. "This Week in UFOs" with Don Ecker, KE6RVO
6. "The RAIN Dial-up" from Chicago
7. Weekly Propagation Forecast with George Bowen, N2LQS
8. Upcoming Special Event Stations with George Bowen, N2LQS
9. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
10. "Amateur Radio Newsline" - Edition #927 from Los Angeles
11. "EZSATS" with Dave Mullenix, N9LTD

This amateur radio bulletin service returns to its former satellite transponder home on the new "Tech Talk Network". Transponder time and uplink equipment have been provided by SKYVISION as a service to the amateur radio community.

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a New York State not-for-profit corporation based in Albany, New York. The program is carried on the "Tech Talk Network" each Saturday at 7:30 PM (EDT) on the Telstar 302 commercial communications satellite, transponder 21 (11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @ WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM or SANDERMAN@DELPHI.COM.

To all radio amateurs

SB PROP ARL ARLP022
ARLP022 Propagation de KT7H

Solar activity was up last week an average of over 10 points from the week previous, and is now in the nineties. The geomagnetic field has been stormy over the past few days, and this may continue over the next week. Look for more stable conditions by May 26, and a rise in disturbed conditions again by the end of the month. We may see some very quiet and stable conditions from June 7-9. Look for solar flux to remain high, and drop below 80 again after the first of June.

Latest figures show that we are near the bottom of the current solar cycle. Minimum sunspot and flux values should occur next year. Expect values rising beyond current conditions around two years from now.

Sunspot Numbers for May 11 through 17 were 28, 42, 70, 68, 74, 77 and 59, with a mean of 59.7. 10.7 cm flux was 76.8, 80.8, 80.5, 79.9, 85.9, 93.8 and 95.2, with a mean of 84.7.

The path projection for this week is to Australia from Eugene, Oregon, Edmonton, Alberta, and New Orleans, Louisiana.

From Eugene 80 meters looks good from 0930z to 1300z, 40 meters from 0830z to 1400z and 30 meters from 0730z to 1500z. 20 meters should be open from 0530z to 0900z every day and for another hour on some days. Check 17 meters from 0400z to 0800z. On some days 15 meters may be open around 0500z.

From Edmonton 80 meters should be open around 1000z to 1200z and 40 meters from 0830z to 1300z. 30 meters looks good form 0730z to 1430z, and 20 meters from 0600z to 0830z and on many days for another one to three hours. On some days 17 meters may open from 0430z to 0700z.

From New Orleans 80 meters should be open from 0830z to 1100z, 40 meters from 0800z to 1130z and 30 meters from 0700z to 1230z. 20 meters should be good from 0500z to 0900z, and 17 meters from 0100z to 0700z. 15 meters should be quite strong from 2300z to 0600z, with the strongest signals toward the end of the period. On some days 12 meters will be open from 2200z to 0530z, with the best shots at an opening around 0030z and 0300z. 10 meters may be open on some days around 0300z to 0400z.

THE SANDBOX NET
By Winston Seeney VE3WFS

Short wave listeners and ham radio operators alike may enjoy the experience of working 'The Sandbox Net.' The Sandbox was created by Paul Uttaro. Paul's home is in Carignan, Quebec. The Sandbox can be heard on the 40 metre subband, on 7063-give or take a kc or two, depending upon propagation.

The Sandbox is a cyclical, roundtable type net, which allows check ins a number of times to say hello. Faced with the problem of inconsistent conditions, net control moves from location to location. During the winter, when conditions favour north south communications, net control has shifted between Thunder Bay, where it has been operated by Steven VE3DP and Murray, an

intrepid sea faring Canadian who makes the West Indies his winter home. More recently, Allan VP9IN of Bermuda has been the voice of the net. Paul usually resumes net control in the summer, when there is a strong east west bias.

Because the net frequency is off band for American phone operators, the net is predominately Canadian with a smattering of off shore drop ins. Hams from the Canary Islands, Cape Verdes, Columbia and a variety of West Indian Islands have participated on the net. Because of the congenial, personal nature of the Sandbox, many of its participants have become night time regulars.

Thanks to the North Shore ARC Sparks for this item.

JULY MARINE RADIO RENDEZVOUS - MIMICO CRUISING CLUB TORONTO

Are you a boater interested in Amateur radio? Are you an Amateur radio operator interested in boating? Learn how Amateur radio can make your boating safer and more enjoyable. Join other boating and radio enthusiasts at the Mimico Cruising Club, Toronto on the weekend of July 7. Come with your boat or without. There are no fees to pay and no complicated registration process. This is a first for the Toronto Marine ARC and organizers are confident you will find the weekend informative and good fun.

Even if you are not a licensed ham, you can talk with sailors from around the world and join in discussions on boat radio and antenna installations. This is an excellent opportunity to learn about radio installation, operation and maintenance. At this Lake Ontario Marine Radio Rendezvous, you will meet the net controllers for the Mississauga Maritime Net and meet sailors who have used ham radio at sea and on The Great Lakes.

Activities begin Friday, July 7, 1995 at 1900 hrs with a barbecue followed by dancing to the "Mimico Jam" jazz band. Discussion groups are organized for Saturday and Sunday and there is a dinner at 1900 on Saturday evening.

Docking at MCC is on a first come first serve basis, rafting may be necessary. There is plenty of room to anchor. If this event interests you, contact Tony Wright VA3MER (416) 763-3481, or Charles Leggatt VE3CFL, (416) 486-6025.

RAC INSURANCE SURVEY

Would an insurance policy which would cover Amateur radio equipment and liability beyond what is provided in your standard home owners' policy interest you? RAC wants to hear from Amateurs about this important subject.

Amateurs have expressed an interest in specialized coverage not otherwise available, and RAC is looking into it. For example, some are seeking coverage for equipment taken away from the home. Others are looking for coverage for loss due to power surges, brownouts and blackouts. Another area of concern pertains to liability exposure which exists in the area of interference.

You are invited to send your comments and suggestions to RAC. Please include information like your call sign, city and province of residence. RAC also needs an estimated value of your equipment at your residence, away from your residence at any one time and the approximate value of your towers, antennas and rotors. How many functions do you attend annually with your radio equipment? Please indicate if you currently insure your equipment separately.

YOUNG AMATEUR OF THE YEAR AWARD

The York Region Amateur Radio Club is sponsoring a national award to help publicize and promote the hobby of Amateur Radio among the youth of Canada. The prize offered to the winner is $500 with first and second place runners up receiving $200 and $100 respectively.

Submissions including details of the sponsor and a photograph of the sponsored youth may be made by any club member. The deadline for submissions is August 31, 1995.

Send submissions to the Awards Committee, c/o Terry van Hattem VE3VHT, P.O. Box 28590, Aurora, ON L4G 6S6.

WORKED ALL WINNIPEG AWARD

The Worked All Winnipeg award is sponsored by the Winnipeg Amateur Radio Club and is awarded to an Amateur radio operator in recognition of his or her outstanding achievement in having accomplished two-way radio communications with the required number of VE4 radio stations located within the City of Winnipeg.

The award is a beautiful certificate on parchment paper with drawings along the borders showing attractions of the city along with the Province of Manitoba emblem.

To win this award, stations outside of Manitoba, but within the North American continent, must work at least 15 different Winnipeg stations. Any band, any mode may be used. All contacts between two stations must be direct contacts. Repeater contacts are not allowed. If a single mode or band is used for all qualifying contacts, it will be noted on the award.

All contacts after January 1, 1956 qualify. QSL cards are not required. A certified copy of your log with signatures of two other hams who have checked the log is all that is necessary.

Send your entry with $2 or 6 IRCs to: Worked All Winnipeg Award, c/o Dick Maguire VE4HK, 598 St. Mary's Road, Winnipeg, MB R2M 3L5.

NO NEED TO ADD PORTABLE TO YOUR CALLSIGN

A recent article in the Calgary ARA Key Klix points out that the rules about callsigns are much easier than they were in the past. According to the article, there is no mention in RIC24 of adding /VE4, etc., when on the road in Canada. There is a mention that visiting US hams must add /VE6 (depending on where they are visiting), but there is no such regulation for Canadians.

When on HF from another province, it is considered polite to add a suffix for the benefit of DX stations you may be working.

CUTBACKS LEAD TO CLOSING OF WEATHER OFFICES

All scheduled Canada Weather Office announced closings are not going unnoticed. The Windsor Border City Radio Club bulletin reports that more than 150 letters have been sent to the Minister of Environment Canada and the local Mps of Essex County officially stating objection to the closing of the Weather Office at the Windsor airport. Border City RC hams are helping to publicize the closing and are hoping to gain public support for maintaining the service.

The club members campaign was extended to include neighbouring Kent and Lambton counties. A visit to all Amateur clubs in the area and a mass mailing to the tri-county ham radio population is also planned. Club members are not sure if their action will result in saving the weather service, but they say as long as they are still open there is hope.

CANWARN SYSTEM STILL OPERATING

The Windsor Border City Radio Club bulletin reports that the Canwarn severe weather warning system is up and operating for another year. Local hams are hoping it won't be the last year. Canwarn is run by Amateur radio in conjunction with the local Weather Office of Environment Canada. Weather Offices in many locations are scheduled for closing, including the one at the Windsor airport.

The weather radar feed from Detroit's metro airport has gone down to budget cuts there and that means Canwarn observers may be the only eyes of the local weather office in Windsor. Canwarn nets are called to order by the Weather Office staff when conditions are such that tornadoes may occur.

NEW HAMSATS LOST

The Amateur Radio Newsline reported recently that two new hamsats have been lost in a launch gone wrong. On March 28 a Russian START rocket roared toward space carrying three satellites, two of them dedicated to Amateur radio. Something went wrong with the converted intercontinental ballistic missile turned satellite launch vehicle. Instead of achieving a polar orbit, it fell into the sea.

Lost was an Israeli Amateur radio satellite built at the Technion-Israel Institute of Technology in Haifa and a Mexican built Microsat built at the University of Mexico. The third satellite was a Russian constructed spacecraft, its mission unknown.

NEW HAMS JUST NINE AND 10 YEARS OLD

The Sault Ste. Marie, Algoma ARC bulletin reported recently that Jordan Strum VA3BPS, enrolled in their club training course last year when he was just eight years old. On March 23, 1995 he passed his examination for the Basic Radio Operators Licence becoming the youngest licensed Amateur radio operator in Canada according to the report. Jordan is now nine and a member of the Algoma ARC.

In other news of young hams, the Dunnville ARC newsletter reported that local 10 year old Jeff Salemink VA3ATV, had recently been successful in passing his Amateur radio exam.

REPEATER FUND GETS GOVERNMENT GRANT

The Sault Ste. Marie, Algoma ARC bulletin, reported that the club had been notified that a Government of Ontario grant for $11,000 had been approved to help provide for a repeater in the vicinity of Montreal River and Hwy. 17. The club must raise $2,700 to qualify for the grant. The new repeater will be linked to VE3SSM repeater providing for emergency communications services.

MILITARY RADIO BUFFS NET

There is a monthly net for collectors of military communications and electronic equipment known as the Wireless Set No. 19 Net. The net meets on 7.060 MHz +/- at 2000z the first Sunday of each month. Net control is Dave VE3LDG, and Chris VE3CBK.

RAC MAKES CLEAR POSITION ON MORSE CODE

RAC President, J. Farrell Hopwood VE7RD, in a recent letter to Industry Canada, made clear that RAC endorses the position of the International Amateur Radio Union (IARU) in regards to Morse code.

The IARU, at a meeting of the International Secretariat in Singapore last September, after careful study, took the position that it will continue to endorse the requirement for radio Amateurs to correctly send by hand and correctly receive by ear, texts in Morse code signals in order to be certified to operate in the Amateur bands below 30 MHz. He asked that government agencies, with the need to know be made aware of RAC's position, especially those acting on behalf of Canada at WRC this fall.

THE CANADIAN VINTAGE RADIO SOCIETY

The CVRS (formerly Alberta Vintage Radio Society), is a non-profit organization dedicated to the preservation, restoration and enjoyment of antique radios and related items. It is run by volunteers and committed to providing regular workshops and swap meets.

The group has a bi-monthly publication called Radio Waves which features articles on restoration, repair, radio history and classified ads. A long term goal of the society is the establishment of a Canadian Vintage Radio Museum.

Meetings are held quarterly in the Alberta Provincial Museum. For more information, write: The Canadian Vintage Radio Society, P.O. Box 43012, Metropolitan Place PO, Edmonton, AB T5J 4M8.

FIELD DAY MEMORIES

Field Day is held across North America at the end of June. The Victoria Short Wave Club, in their bulletin "Zero-Beat", reminisced about Field Days past. One story in particular deserves repeating.

Jack Mooney VE7WE, some years ago, was keenly preparing his trailer for Field Day when suddenly from his kitchen, where his wife was doing some deep fat frying came a loud scream. Fearing the worst, Jack dropped everything and rushed towards the house, tripping over the tongue of his trailer and breaking his ankle. In spite of the pain he continued toward the house, this time falling down the back steps.

It turned out Jack's wife was okay, but his old dog had just had a heart attack and passed away. Jack rushed the dog to the vet and then headed off to the hospital for treatment of his injuries. Returning from the hospital with a cast on his ankle, he continued packing his gear and drove off to spend the weekend making a record number of contacts.

ELECTION TO THE HALL OF FAME

Maurice Gladden VO1FG, Chairman of the Board of Trustees of the Canadian Amateur Radio Hall of Fame, recently announced the election of Bill Loucks VE3AR as a Member of the Hall of Fame. Terry Darling VE3CAB, and Eric Quiring VE5HG, were elected to receive the Award of Honour.

The elections are made by a Board of Trustees who determine the worthy recipients in a nation-wide vote. The date and place of the official awards will be announced. The story of the awards will be covered in The Canadian Amateur.

AMATEUR STATS

There are currently 43,200 licensed Amateur radio operators in Canada. Approximately 18.5% of these are members of RAC.

AMATEUR RADIO EQUIPMENT VALUABLE TO THIEVES

The Ottawa ARC bulletin Groundwave recently carried an item written by Robert Peschka K7QXG, who directed detective undercover operations in a major city in the Pacific Northwest. His story in Groundwave tells about one gang who used Amateur radio equipment they had stolen for communications. They were arrested when caught breaking into some expensive homes.

The gang leader's home was searched and more than $125,000 in stolen property was recovered, which included a considerable amount of Amateur radio equipment. The police tried in vain to locate the owners of the equipment but most of it ended up being sold for a fraction of its value at the police auction.

The advice offered by Robert is to engrave your driver's licence number on all of your equipment so if it is stolen, the police have a chance of locating you. He recommends your driver's licence number because police have access to information which can identify you. Privacy laws in the US keep the police from knowing who Social Security numbers belong to.

UPCOMING IN TCA
Rob Ludlow, VE3YE
Editor, The Canadian Amateur

The June issue of The Canadian Amateur features the first of two parts on the increasing challenges to erecting towers in urban environments. The June issue also includes the new HF Band Plan, the proposed plan for the 144 and 430 MHz bands, the rules and entry form for the RAC Canada Day Contest, two full pages of coming events listings, and ads chock full of the latest ham gear.

All this, plus the usual extensive selection of letters, Silent Keys, regular columns, DX and contest reports, including a complete contest calendar, HF propagation forecasts, packet and VHF/UHF, Club News, YL News, QUA, ARES, Public Service, Section News, This Month in History, bench and homebrewing tips, antenna design, shortwave listening, and the Swap Shop - all in the June issue of The Canadian Amateur, coming to your mailbox this month.

VE3GRS "GABEREAU" GUEST

Steve VE3GRS, packet/internet Editor of the RAC News Bulletin, will be Viki Gabereau's guest during the second hour of her CBC Radio program on Tuesday, May 23rd. "Gabereau" is broadcast nationally on CBC Radio between 2 and 4 p.m. local time across Canada. The conversation will include discussion of Steve's work at Queen's University, his blindness, educating children with disabilities and a mention of amateur radio. Congratulations, Steve, on the exposure.

Special Bulletin 23 ARLX023
From ARRL Headquarters
Newington CT May 19, 1995
To all radio amateurs

SB SPCL ARL ARLX023
ARLX023 EMF cancer link studied

The Council of the American Physical Society (APS) has issued the
results of a study entitled ''Power Line Fields and Public Health,''
concerning the potential dangers of cancer from electromagnetic
fields that emanate from common power lines and electrical
appliances.

The APS concluded that ''the scientific literature and the reports of
reviews by other panels show no consistent, significant link between
cancer and power line fields'' and '' the preponderance of ...
research findings have failed to substantiate those studies which
have reported specific adverse health effects from exposure to such
fields.

''While it is impossible to prove that no deleterious health effects
occur from exposure to any environmental factor, it is necessary to
demonstrate a consistent, significant, and causal relationship
before one can conclude that such effects do occur. From this
standpoint, the conjectures relating cancer to power line fields
have not been scientifically substantiated.''

The APS said that billions of dollars are being spent by states and
municipalities to mitigate and litigate this perceived problem and
''the burden of cost placed on the American public is incommensurate
with the risk, if any.''

A background report on this issue by David Hafemeister is available
on the Internet through the APS World Wide Web HomePage at:
http://aps.org

I have seen the use of "we" attributed as well to Charles Lindbergh, who was certainly entitled to "I" if anyone was but who said he always wanted to remember that the airplane was there as well. I think some hams think of "we" as "me and my rig," which is not unreasonable. Though I agree that "We're a truck driver" sounds pretty weird.

Now TWICE the number of outdoor Tailgate spaces are available...

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
May 21st, 1995
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $2 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
tailgate area is available for all sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

In article <3pbfqq$lm0@ixnews3.ix.netcom.com> gamma7@ix.netcom.com writes:

> Well Ken, people today are still buying up Drake and Heathkit gear.
> Some people out there will kill to get their hands on various types of
> Heathkit gear like HW-16s, HW-7, 8 and 9 as long as it is in good

And Collins, which had IMHO the BEST on the market at the time,
and still performs better than most equipment on the market even
with all tube design, I would love to get my hands on Collins receiver.
but these companies (except for Heathkit, wish they were still producing
ham gear). Started to produce equipment that people like me (at the
time) couldn't afford. But I was able to afford a Radio Shack
SW receiver, still performing well, and a Kenwood TS 820 S
which still performs flawlessly, and is still on it's first set of
finals.

> condition. You see Drake radios and other American manufactured radios
> that have been around for 30 to 40 years and still being used, bought,
> sold and traded. Ever see any old Radio Shack, Allied or Knight Kit
> equipment at hamfest. A few, but most of it was not of the quality to
> last as long as people like Drake and Heathkit.

I started out with Heathkit rigs, yes they WERE good, no doubt about,
but where is Heathkit NOW?
I also remember when the Drake TR - 7 came out, I heard nothing but
complaints about it when it first came out. After a bit of work from
Drake they made it into a decent rig.

>
> The Radio Shack ham radios are not as good as you claim. Theese Usenet

That's your opinion (and yes, a few others).

> groups are filled with postings are people having this and that problem
> with the RS units. What really gets a laugh out of me are the postings
> that talk about how lucky they were to have bought (been ripped off
> for) a TSP. The postings go on and on about how they took the radios
> back five times and always had it replaced, fixed or whatever. What a

At least in our store, every customer who has purchased a 202 has had no
complaints about them whatsoever, they have performed flawlessly.
Infact, they come in and tell us how much they like the rigs.

> laugh! If I had a radio that had to be returned that many times, I
> would return the radio and get my money back. Who wants equipment that
> is not reliable.
>

> My requests for your company are simple. Bring out interesting
> products. Something new and innovative. My God, everyone sells a 2

Why? I (as a consumer, forget that I work for RS) want
something that works, and is reliable (Which the 202 is) and that
I am not going to pay 6 or $700.00 for (Remember I am in Canada, what
costs you 189.95, costs me 45% more) I don't want bells and whistles.

> meter rig...big deal. Second, if you have to make it overseas, at
> least have it built by a company that will build in quality and
> reliability. Third, offer the product at a fair price with accessories
> to support the product. Fourth, pay your people fairly and treat them

Considering the price of the 202, I would buy it before I paid
$600.00 for another rig.
$8.99 for cig lighter adapter is preatty good if you ask me.
and we sell an inexpensive, decent quality speaker/mike for it.

> with respect so that you will retain knowledgeable people that can
> develop relationships and build a loyal customer base. Fifth, put

Our manager has been here for four years, Mary has been with us
for three years, I have been there for one. Before Mary came to
us she ran the dealership in another town nearby.
As to what we get paid, I wouldn't mind a bit more :-)
But who wouldn't?
And we have many loyal customers who come to us for everything
from batteries to stereos. And they come back over and over again,
to buy new stuff.

> inventory in the stores. People are tired of buying used demos for
> full price. Sixth, stop selling returned equipment as new...in most
> cases it is not.

I have NEVER told ANYONE something is new when it is a demo, returns
are never sold as new in our store, you can't get away with it.
items all beat to rat - shit are not accepted as returns, our policy
is that it must be as new, in the box, in re - sellable condition
BEFORE we will take it back. And considering on some branded
product we only make 13 point margin, why should we lower the price
on a demo?
We would LOSE money. By the way, every time we sell a computer
in our store, and it's the same Canada wide, whether it's IBM, Compaq
(note, both U.S. made) or AST, we lose 2%.

Joel McClure (mcclure@cadcam.atg.gmeds.com) recently wrote
in <3pfino$mdn@mloeff01.elec.mid.gmeds.com>:

: Is it me? I've only been a "Tech Plus" since May 13, and I'm already
: wondering why I upgraded. I bought an HTX-202 as a cheap, convenient
: way to get back into the hobby, but I'm thinking that that isn't
: good enough. I was listening to the "Rude Repeater" (147.14 - Royal
: Oak, MI) last night and heard something like:

: Ham 1: "I think there was another station trying to break in"
: Ham 2: "It was really broken up. It must be an HT."
: Ham 1: "A 'wanna-be'."
: Ham 2: "Whatever."
: Ham 1: "Actually it was kind of fun swinging my beam around to try
: and see which direction he was broadcasting from."

The last responce is the clue...That guy listens on the input as the
repeater does not have a real receiver. They all need 160 watt radios
just to get in. Find a real repeater.

: Does anybody know how I can deal with situations like this? Can
: anyone help me feel that hams are overwhelmingly still friendly?

Spin the dial...look for real conversation...go to the local club meets.
Hams are still friendly...I still can hear a smile in their voices.

The main thing is to be persistent and partisipate. The smile in your
voice will come through loud and clear. Don't be so serious, you will be
compeating with them in no time at all.

Have Fun! the guy swinging the beam was having fun....get a beam.

Price volatility has a lot to do with it, but there are also powerful pressures from manufacturers to avoid stating prices in ads; the idea being to prevent price wars. A mail order vendor told me this when I politely asked why nobody published prices. He asked me not to quote him by name because he would almost certainly lose his "authorized dealership" for Alinstancomsu.

One would think this would be illegal, but with the gonzo government we have these days it's mighty hard to tell. Computer mail order was once suppressed by companies like Apple because it competed with storefront dealerships and drove down margins; they paid BIGTIME for that one, and will probably now be a niche manufacturer forever. The story won't be repeated here because there's no corresponding "clone" phenomenon. All radios come from a manufacturer, and these days are type accepted. There's no "snap-together" radios made from standard subsystems, even though that's a helluvan idea and I would love to have that come to pass.

It's a complex business. Please don't assume or suspect that QST has anything to do with it. I own half a technology magazine and the *last* thing I would try to do is tell advertisers what to advertise.

3309. New licences and operating conditions in VK

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-19 00:00:00 UTC
From: dave@eram.esi.com.au
Message-ID: <3pgvn7$ear@eram.esi.com.au>
Source record: 246189
Cross-posted to: aus.radio,rec.radio.amateur.misc,rec.radio.info

NEW LICENCES AND OPERATING CONDITIONS

The long-awaited new licence and operating conditions and privileges for amateur stations were expected to be announced by the Spectrum Management Agency (SMA) by the end of May. It was not known in early May when they might come into effect.

These have been delayed since 1992, when foreshadowed amendments were first announced by the then Minister for Communications, David Beddall.

A lot of hard work by the WIA went into revisions of the Radiocommunications Regulations and the Technical Licence Specifications (TLSs), and negotiating acceptance of a whole variety of issues over operating conditions and privileges with the SMA.

While many of the conditions and privileges the WIA sought have been incorporated, we didn't win on everything. But that won't stop continuing effort by the WIA to gain advances in privileges and conditions in the future.

The new privileges and conditions granted by the amended Regulations and new TLSs provide increased freedom for amateur operators, freeing up some of the technical and operating restrictions which have existed up to now, and are certain to improve the experimental foundation of the hobby.

There are to be two new Licence sub-types under the general Amateur licence type recently created by the SMA. These are: the Intermediate Licence, replacing the old Combined Licence, and the Novice Limited Licence, a totally new class.

In addition, there is to be the Unrestricted (AOCP) and the Limited licences (AOLCP), and separate licences for amateur beacons and repeaters, making seven licence sub-types in all.

The Novice Limited will be a no-code licence giving Novice licence privileges on the 2m and 70cm bands, with access to digital (packet and RTTY) and FM voice modes. Novice Limiteds will be able to use a maximum RF power of 30 watts (average). Reciprocal licence agreements are yet to be negotiated with other countries, the SMA advised.

The Novice licence will have enhanced privileges above 30 MHz, providing access to the 70cm band and to packet and RTTY digital modes on both 2m and 70cm. Permitted output power will increase to 100 watts pX (peak) and 30 watts pY (average). Novices will also get access to

more band space on the 15m and 2m bands, in addition to 433-435 MHz and 438-440 MHz on 70cm.

Limiteds are to get access to the 10m band, but negotiations over the final details had not been completed by early May.

Intermediates are to get access to the full 15m and 10m bands and power restrictions below 50 MHz are to be lifted, allowing the use of 400 watts pX (peak) and 120 watts pY (average).

Unrestricted and Limited licensees will be permitted wideband modes, such as spread spectrum or pulse modulation above 420 MHz, including those "not yet invented".

Restrictions on repeater cross-linking have been removed.

The amended Regulations affecting amateur radio were signed by the Governor General on 28 March, but the TLSs were not finalised by early May. These details are not complete. We'll have further, complete details, for WIA News when they come to hand.

(From the Federal WIA Office)

3310. Looking for call of Sacramento SK George T. Neason

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-19 00:00:00 UTC
From: jeffd@coriolis.com
Message-ID: <3ph5b3$8v4@news.primenet.com>
Source record: 246190

I wonder if anyone has any moldy callbooks in the garage that might go back to the Seventies? A good friend of mine without Internet access is trying to find out the call of his grandfather, George T. Neason, who lived in Sacramento from 1956 until he died in 1990. Jim says he thinks his grandfather's license lapsed in the Seventies sometime.

Of course, if anyone actually KNEW Mr. Neason, that would work too.

Thanks in advance for any help you can get. Jim now has his tech and is studying for his Advanced, and would like a shot at claiming his grandfather's call.

Hans: Check with your local radio licensing authority. They probably
have a brochure for pleasure boaters that explains the radio setup. I
know the U.S. Coast Guard has such information, and we can also extract
it from out government regulatory manuals, the Code of Federal
Regulations. The scheme is a bit convoluted, since the channel
assignments do not follow in the same order as the frequencies. There
appears to have been some patching over the years. The two sets on any
radio are International and U.S. Inland (for our river and lake
systems). The difference is that some inland channels are not split the
same way as the international assignment that all salt-water boating
uses. If I have time to type in the list, I will. If you are on packet,
I can send you the list via packet and satellite.

Hello.

I have a copy of a registered version of LogWindows V2.0 that was given to me a while back by a friend. I am thinking about purchasing this program in a while, and I would like to play with the copy that I have. However, I don't have the manual and neither does the guy I got it from. Anyone using this, I would like to ask if you could help me with two things. I am using this with a PK232 and a 486 dx 33. I would like to know, why when I try to use the tnc, it says that I don't have Pakratt for windows running. I know I don't...is that a separate feature I am supposed to buy? I cannot find anywhere on there where I could change from the different modes. I have tried all the keys and cannot figure this out. Also, what are some of the basic commands for this program such as those for transmit, receive, etc...

Please let me know if possible...just email to

djansen@umr.edu

Thanks,

Dwain

3315. CSI8200R Repeater Controler>Sale

I have a CSI 8200R full duplex patch\controler that I would like to trade for a VLF or HF receiver to be used in amateur scientific research in western siberia. I payed over $700.00 for the unit , but do not expect to get that much in trade. Also, if a public service repeater group has a need I will give special thought. Make me an offer by private Email...Who knows.

3316. Still a few things left.

Taking the Pain and Frustration Out of Code Training

Questions of relevance aside, the central fact that makes the Morse code requirement so distasteful to many is that gaining code proficiency is seen as a lengthy and painful process. While it does take time to get to 13 or 20 wpm, it DOESN'T have to take as long as most people think and it doesn't have to be a painful and frustrating experience.

I know -- I was frustrated for 30 years, then found a training method that took me from No-Code Tech to Extra without pain (but not, I must emphasize, without time). This method not only got me through the 20 wpm test, but also left me in a frame of mind to enjoy using CW on the air. CW is now my favorite mode.

This method, and the background surrounding it, is covered in an article I wrote which appears in the May issue of Radio Fun. I suggest that those who would like to try a better way of gaining code proficiency look at this article. (No, I don't get any extra money from Uncle Wayne based on the magazine's circulation!)

Not everyone, I'm sure, wants to see code training become quicker or less painful. After all, that reduces its value as a filter or an apprenticeship. I detest that attitude myself, because if code is seen a bitter medicine forced down people's throats, they'll abandon it as soon as they get their licenses. That leaves fewer people for me to engage in pleasant CW ragchews.

If there is sufficient interest, I could prepare an outline of this training method for a WWW Home Page. That will have to wait a while, however, because of constraints on my time. For the moment, try to find a copy of Radio Fun.

I would be very interested to hear from anyone who uses the information in the article to successfully upgrade.

I have two TM-241A's and they both are different as far as AM reception is
concerned. One is pretty good. The other can't pick up AM unless the
squelch is opened. I have called Kenwood about it but they reply
"specifications are guaranteed for the ham FM band only". I am very happy
with the rigs but I wish they performed much better with the AM aircraft
band.

American Physical Society Issues Statement on Power Line Fields

FYI No. 69, May 18, 1995

In order to increase the level of awareness in the physics
community about the public policy activities of the ten Member
Societies of the American Institute of Physics, it is the policy of
FYI to report on resolutions and statements by those Societies.

The following is a statement by the Council of the American
Physical Society, issued in April:

"Power Line Fields and Public Health:

"Physicists are frequently asked to comment on the potential
dangers of cancer from electromagnetic fields that emanate from
common power lines and electrical appliances. While recognizing
that the connection between power line fields and cancer is an area
of continuing study by research workers in many disciplines in the
United States and abroad, we believe that it is possible to make
several observations based on the scientific evidence at this time.
We also believe that, in the interest of making the best use of the
finite resources available for environmental research and
mitigation, it is important for professional organizations to
comment on this issue.

"The scientific literature and the reports of reviews by other
panels show no consistent, significant link between cancer and
power line fields. This literature includes epidemiological
studies, research on biological systems, and analyses of
theoretical interaction mechanisms. No plausible biophysical
mechanisms for the systematic initiation or promotion of cancer by
these power line fields have been identified. Furthermore, the
preponderance of the epidemiological and biophysical/biological
research findings have failed to substantiate those studies which
have reported specific adverse health effects from exposure to such
fields. While it is impossible to prove that no deleterious health

effects occur from exposure to any environmental factor, it is necessary to demonstrate a consistent, significant, and causal relationship before one can conclude that such effects do occur. >From this standpoint, the conjectures relating cancer to power line fields have not been scientifically substantiated.

"These unsubstantiated claims, however, have generated fears of power lines in some communities, leading to expensive mitigation efforts, and, in some cases, to lengthy and divisive court proceedings. The costs of mitigation and litigation relating to the power line-cancer connection have risen into the billions of dollars and threaten to go much higher. The diversion of these resources to eliminate a threat which has no persuasive scientific basis is disturbing to us. More serious environmental problems are neglected for lack of funding and public attention, and the burden of cost placed on the American public is incommensurate with the risk, if any."

For more information, contact Robert Park at 202-662-8700, or David Hafemeister at 805-756-2205. A background report on this issue by Hafemeister is available through the APS HomePage at: http://aps.org

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 19/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 19 MAY AND FORECAST FOR 20 MAY - 22 MAY

1A. SOLAR SUMMARY
Activity: very low

Flares: none

Observed 10.7 cm flux/Equivalent Sunspot Number : 86/29

GOES satellite data for 18 May
Daily Proton Fluence >1 MeV: 7.1E+04
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.1E+08 (moderate)
X-ray background: B1.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
20 May 21 May 22 May
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 20 May: 85/27

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 18 May
Learmonth 12 2233 3332
Fredericksburg 11 10
Planetary 11 11

Observed Kp for 18 May: 3223 3233
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
20 May 20 Quiet to active
21 May 20 Unsettled to active
22 May 20 Quiet to active
COMMENT: IPS Geomagnetic Warning 14 was issued on 17 May and is
current for interval 17-25 May.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
19 May fair-normal fair-normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
20 May normal fair poor
21 May normal fair poor
22 May normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
19 May 26 near predicted monthly values during local day, with
night-time enhancements of up to 30%.

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
20 May 20 near predicted monthly values
21 May 20 near predicted monthly values
22 May 20 near predicted monthly values
COMMENT: Obs Townsville MUFs: near predicted monthly values.
Obs Hobart MUFs: near predicted monthly values.
Night-time spread F observed Hobart and Sydney.

Well, Mark, thank you for your support. I can't seem to find MD's
original posting, but I'd like to thank him for his invaluable
advice. I'll lie awake tonight in regret that I couldn't obtain
his advice before I made my foolish purchase. I'm so sorry that I
don't have unlimited resources to spend on equipment so I don't
offend others with my "filthy" signal. I think I'll just quit the
hobby right now. My shame is overwhelming. To think that I
intentionally bought a low-power HT with a non-existent antenna
with the express purpose of offending the seasoned "shack potatoes".

I'm tired of hearing comments from clowns regarding how bad HT's are.
I've never had a terrible signal report, and I think a prevalent
tendency for some experienced hams is to chide others who don't have
what they do. I do happen to know something about antennas and have
taken both power and antenna theory courses in college. My goal
wasn't to have the signal of WJR. My goal was to get back into
the hobby and enjoy it. Maybe I'll stick to CW.

3325. WEFAX - any interest? We're looking for answers

>>This is simply wrong. Ask yourself this question, why doesn't NASA
>>use OOK Morse encoding for its deep space probes?
>
>For the same reason the police don't use EME. Different situations
>require different modes of communications. 2M FM is great for across
>town and CW is the perfect mode for across the hemisphere.

You know very well that the above response was to the pereinnial claim
that Morse gets through when nothing else will. That's not true, and
NASA's use of better techniques, as long ago as the 1960s, is only an
illustration of that. It's also true that VHF/UHF frequencies are good
for short range voice and data operations, or global data operations
via the Microsats using simple low power equipment and low profile
antennas. But more to the point, low power data operations on HF will
also span the globe. Manual Morse holds no advantage over some other
digital encodings in that regard, in fact, it is at a considerable
disadvantage to sone of the available techniques due to its incoherent
nature.

>These exotic modes that you dream about are neither affordable nor common
>amongst the world's hams.

That's funny, I have had extended conversations with amateurs in over
100 real countries using those digital methods. Our resident "live better
digitally" Canadian claims 254 DX "countries" on digital modes. Seems the
rest of the world isn't quite as backward as you'd have us think. Coherent
techniques are neither exotic nor rare anymore. Thanks to the microelectronics
revolution, which you apparently slept through, there are single chips, or
simple chipsets, on the mass market that implement many of these techniques.
Yes, these are available even to amateurs in Botswana or Gabon.

>Thus, in the meantime we'll keep encouraging
>folks to use this simple yet effective mode. It really has no equal
>in that one can spend an afternoon building a transmitter and work the
>world that evening.

I too can build a digital transmitter in an afternoon (it needs to vary only
by one component from your OOK transmitter), and "work the world" that evening.
(That's a misnomer, of course, since propagation won't necessarily permit
working the *entire* world in one evening. I may be able to take advantage
of automatic relay systems to circumvent that problem, however, but you
won't.)

>>It's true that a OOK Morse transmitter is no more complex than a
>>FSK transmitter,
>
>Everytime you state this you forget to mention the complexity
>of the FSK keyboard. I can make a handkey in 5 minutes.

If you insist, I can build a keyboard entry device in half an hour,
and you'll be able to operate it with one hand too (a chording keyboard),
but that's irrelevant to most digital communicators, since they'll already
have digital equipment suitable for driving the transmitter with either
hand generated text or large files. Certainly, anyone on this forum has
access to a keyboard already, and that includes amateurs in over 100 real
countries. Nor is cost a major consideration. One amateur I worked in
a "third world" country had scrounged his TTY from the discard pile of
the local PTT. It seems that even the most backward countries have upgraded
to satellite terminals and digital methods for their communications
systems. An enterprising amateur can almost always find castoffs a
generation or so back to use in his projects. (A generation in today's
electronics may be less than 5 years. Think about that.)

>>but the receiver, oh my, to be effective the
>>receiver needs the complexity required for SSB.
>
>I've got dozens of well-designed receiver circuits in front of me;
>any of them could be built in one day. That evening I'll be decoding
>Morse via my ear - what are you going to build to decode FSK signals?

I'll probably use an advanced circuit that may take a couple of evenings
to assemble, but such sophistication is not required. The very simple
Baycom style modems that can easily fit in a RS-232 connector shell
can be built in a few minutes. And it won't take months of wetware
programming to decode the signals, either. If you insist on construction
of the display system as well, rather than just using the home computing
appliance, or an old scrounged terminal, then I built such a display
several years ago from a single chip micro and a LED panel. It took
under an hour to wirewrap it, and about 10 minutes to write the simple
assembly language program to make it run. This sort of thing is really
trivial, basically just a lookup table and a few timing loops. Of course
I wouldn't bother to build such a thing today, I'd just use my old HP-100
for the display. Once you get rid of the obsolete paradigm of components
as only meaning discretes, building complex systems becomes easy.

>>This is a red
>>herring, however, since there are single chip solutions for all
>>these modes
>
>And Brian will think a single chip is `building from scratch' (heehee).

And he'll be right too. If you want to build totally from scratch,
you'll mine your own ores, draw your own wire, make your own diodes,
etc. But even you don't do that. You've taken a step up from that
in the use of manufactured components. Brian has taken the next
step up from that by using components of more modern manufacture.

You don't care what every grain of carbon is doing in your resistor,
you only care about what happens to signals applied to its terminals.
Similarly, Brian doesn't care about what every individual transistor
does inside an IC, he only needs to know what happens at its terminals
when certain inputs are applied. Its the resulting tranfer function
that is important in both cases, and he can get more complex, or
simpler, transfer functions from his ICs than you can from a collection
of discretes. This is part of the power of the microelectronics revolution.
Once it was extremely difficult to get a low drift opamp built from
discretes. Very precision components were needed, and lots of tedious
hand trimming, and it still wasn't very good. Today you get four to
the package for under half a buck. They'll be very repeatable and very
stable because they are manufactured all on the same substrate. This
in turn allows you to build circuits that simply weren't practical
a few years ago, and do it easily, cheaply, and quickly.

I can build in minutes circuits it would have taken a ham of the 1930s
months to build, if he could get them to work at all. So it's no wonder
that modulation encodings a ham of the 1930s might find most useful
would hold little attraction to me. It would be like telling a ham
of the 1930s that he had to go back to damped wave spark gaps and iron
filing coherers rather than the SOTA vacuum tubes he preferred to use if
you were to ask me to go back to using just discrete components when
there are far better parts available that will both do more and cost
less than their discrete equivalents (assuming discrete equivalents
for some of them are even feasible).

Gary

I recently purchased one of the RS HT's. The sale last month was off but the person behind the counter said that he would try and get me the sale price anyway. (I guess it had gone up some $40.) He called the District Sales Manager to get the approval for the sale and tried every way to save me some of my hard earned money. He did get the approval and did mention that the DSM wasn't too happy. I did buy it and even the the TSP for 39.00 (60 month, Walk-in Replacement) since I was worried about some of the problems I have been reading about.

Contrary to "popular" belief, the salesman was polite, knowledgable, and at no time tried to force anything on me. The 202 seems to only have one problem, it has rather high deviation, a simple fix. For under $200 it is a fully functional radio. The manual could use a major rewrite though. Normally I am very cautious of purchasing any product from RS. After 2 months of reading the pros and cons of this radio the positves outweighed the negative remarks.

Sure it is not a dual bander. It is not fully TNC compatible. It does have decent power, audio quality is good to very good. Mic sensitivity was rather high, but adjusted down quite nice. You do have to be careful about changing your default offset back to what your local repeater use after setting up a non-standard offset. (Programming has a couple of strange gyrations.) I'll vote on the positive side for the 202, for know.

for what it is worth.......Mike KB9KFE

I know nothing about these, except that I believe they're
multiband (synthesized?) QRP transceivers. Any one out there
have one?
(I have already called IL and left a message requesting info).

I'm looking for comments on what you
like and dislike about yours.

I'm planning on using it as a second, portable rig for
backpacking.

Regards,
Peter

3331. GB2RS News 21st May 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-19 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <800929865snx@llondel.demon.co.uk>
Source record: 246211
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 21st of May and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The amateur radio club at Bigyn County Primary School in Llanelli, Dyfed, was featured in a live television item on S4C's Heno { pronounced henn-oh}, the Welsh language current affairs programme, on Tuesday, the 16th of May. For the past few years the school has been operational on packet radio.

The RSGB's Amateur Radio Direction Finding committee presently has vacancies, and is requesting applications from suitably qualified RSGB members. Further details are on page 12 of the June issue of Radio Communication, which is due to be sent to all members this week.

Now here's some news of special event stations on the air:

The Radio Society of Bermuda is operating VP9RND to celebrate the 200th anniversary of the Royal Naval Dockyard in Sandy's Parish, Bermuda, this weekend. The station will be active on all HF bands on both CW and SSB. They also plan to set up satellite and packet radio stations. An A4-size certificate will be offered to those who make contact with the station and QSLing will be handled by Bob Nadolny, WB2YQH.

From today, Sunday the 21st of May, until Friday the 26th of May, GB2WH will be operating from the island of Worms Head near the Gower Peninsula, West Glamorgan. Operation will be mainly on 7.060MHz SSB, and if conditions allow the use of a kite antenna, also on 80 and 160 metres.

In celebration of National Trust Centenary Year, Dragon Amateur Radio Club will be joining the festivities at Penrhyn Castle on Sunday the 28th of May between 0900 and 1700 UTC, using the club callsign GC4TTA.

On Sunday the 28th and Monday the 29th of May, the Halifax and District Amateur Radio Society will be operating a special event station in conjunction with Rishworth School Amateur Radio Society. They will be operating from Wainhouse Tower, Halifax using the callsigns G2UG and G0SQA. Further details can be obtained from David, G0DLM, on 01422 202306.

Now some items of HF DX news from the weekly RSGB DX News Sheet.

A demonstration of amateur radio has taken place in North Korea. A group of Finnish business-men, believed to include Martti Laine, OH2BH, has been in North Korea and a station signing P5/OH2AM was reported

operating on 14295 and later 7002 kHz. Operation was very sporadic and it is thought that this was only a demonstration station.

From Market Reef, a Finnish group will sign OJ0/OH8AA from Thursday the 25th of May until Monday the 29th, taking in the CQ WPX CW contest over the weekend. Outside the contest, activity will be on all bands from 160 to 6 metres, SSB and CW.

Alex, PA3DZN, will shortly be on the air from Zaire, using the callsign 9Q2L. He has recently been very active as 9X5EE from Rwanda.

And from Liechtenstein, DL8SET will be active from Wednesday the 24th of May until Sunday the 28th on HF and 6 metres.

Next the Rally News:

Today, Sunday, the 21st of May, the Yeovil QRP and Construction Convention takes place at Preston School Centre, off Preston Road, Yeovil.

Also today, the Mid Ulster Amateur Radio Club annual rally takes place at Silverwood Hotel, Lurgan in County Armagh. All the usual traders will be in attendance and there will be a bring and buy stall. Talk-in is on 2 metres, channel S22.

The Amateur Radio Caravan and Camping Rally will take place at North Scarle, Lincolnshire from Friday the 26th of May until Monday the 29th of May. For details telephone 01 494 531755

Next Sunday, the 28th of May, the East Suffolk Wireless Revival takes place at Maidenhall Sports Centre, Stoke Park High School, Ipswich. Further details may be obtained from Bob, G7HZV, on 01 394 271257.

Also next Sunday the 28th, the Maidstone YMCA Mobile Rally will be held off Cripple Street at Loose, south of Maidstone. For details telephone 01622 630000 before 9.30pm.

The Trafford Rally will also take place next Sunday the 28th at the Greater Manchester Exhibition and Events Centre, in the centre of Manchester. The event features the usual traders and a bring and buy stall plus an RSGB information and book stand. Doors open at 10.30 am. For further information contact Graham, G1IJK on 0161 748 9804.

Plymouth Radio Club's annual radio and electronics fair, on Sunday the 28th of May will take place at Coombe Dean School in Plymstock, and not at the address shown in the May RadCom. For further information contact Frank Russell, G7LUL, on 01 752 563 222.

The manager of the Scarborough Amateur Radio Society Radio Electronics and Computer Fair, to be held on Sunday the 30th of July, has changed address. Ross, G4ZNZ can now be contacted at 4 North Street, Nafferton, Driffield, East Yorkshire. His new number is 01377 257074.

Now for the HF contest news:

The CQ WPX CW contest is taking place next weekend, the 27th and the 28th of May. A copy of the full rules is available from RSGB Headquarters by sending a first class stamped addressed envelope to the RadCom office at RSGB HQ, to arrive by next Thursday, the 25th.

Next some VHF contest news:

The first 144 MHz Backpackers contest takes place today, Sunday, the 21st from 1100 to 1500 UTC. The full rules were published on page 83 of the April RadCom.

SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whiskey Bravo and G7 Uniform Romeo series, and Novice calls in the 2 0 Alfa Lima and 2 1 Echo Charlie series.

And now the solar factual data:

The period from the 8th to the 14th of May saw solar activity increase to low levels with the geomagnetic field decreasing to quiet levels. Sunspot numbers increased from 13 on the 8th to 70 by the 13th, with a mean of 42. Solar flux levels did not respond too well to the increase in spot numbers, and increased only 3 units from 78 on the 8th to 81 units by the 13th, with an average of 79 units. The electron fluence declined from very high levels to end the period at moderate levels. The X-Ray flux levels increased slightly until the 13th, but on the 14th increased sharply to A9.9 units. The average for the period was A4.6 units. The 90-day solar flux average on the 14th was 82 units. Geomagnetic levels declined from unsettled conditions on the 8th, with an Ap index of 19 units, to quiet levels for the rest of the period. The average was Ap 10 units. The aa indices, as supplied by the British Geological Survey for the period from the 2nd to the 8th of May, was up to sub storm levels for most of the period. The most disturbed day was the 5th, with a daily figure of 75.4 nanoTeslas and during the midday period 137 nanoTeslas was recorded. The quietest day was the 8th, when 32.6 nanoTeslas was recorded. The average for the period was 53.4 nanoTeslas, about K4. Bartell's rotation number 2210 starts on the 27th of May.

I'll repeat the figures: spots - 42, flux - 79, Ap index - 10, X-Ray flux - 4.6.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers from the 5th to the 11th of May, as reported by Meudon, increased at the end of the period. Starting at 6.2MHz on the 5th, declining to 5.1MHz on the 8th, and then increasing to 8.0MHz by the 10th. The average was 6.5MHz. The darkness hour lows also increased from 2.5MHz to finish at 3.3MHz, with an average of 2.7MHz. The daytime highs took place around 20.00 hours, except on the 8th when they took place at 10.00 hours. The darkness hour lows took place between 03.00 and 04.00 hours. Sporadic E occurred for short periods on the 8th and the 9th.

I'll repeat the figures: highs - 6.5MHz, lows - 2.7MHz.

And lastly the solar forecast.

This week solar activity is expected to be at very low levels with the quiet side of the sun looking our way. The solar disc is expected to be spotless most days, and the solar flux levels down to the low 70s. Geomagnetic activity is expected to be "active" for most of the week but hopefully decline to quiet levels for next weekend. Ionospheric MUFs during daylight hours are expected to be about 17MHz for the south and 15MHz for the north. Levels may increase during the second half of the week. The darkness hour lows are expected to be about 10MHz, but could be up to 13MHz on the quieter geomagnetic nights, particularly later in the week. Sporadic E can also be expected.

And that's the end of the solar information.

Finally in the main news, we are seeking more news stories from amateurs throughout the UK, in order to make the GB2RS news broadcasts more interesting. The most suitable stories refer to events which have taken place during the previous week, or which are about to happen during the following week or two. Apart from club and rally information, we would also be pleased to receive operating news, for example about special event stations, contesters who are going to rare parts of the UK or abroad, or about DXpedition operations. News items should be sent to the RSGB, Lambda House, Cranborne Road, Potters Bar, Herts, EN6 3JE, marking the envelope 'Urgent News for GB2RS'. News items for GB2RS may also be faxed to the following number only: 01707 649503, that's 01 707 649 503. The deadline is the Tuesday evening preceding the Sunday broadcast.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

3332. HTX-202 power supply

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-19 00:00:00 UTC
From: Joel McClure <mcclure@cadcam.atg.gmeds.com>
Message-ID: <3pijgq$bvp@mloeff01.elec.mid.gmeds.com>
Source record: 246212

I have an Audiovox 6A regulated power supply that I would like to power my HTX-202 with (w/external antenna, of course). I measured the voltage of the power supply, and it read 14.04 v. Is this too much for the 202? Also, what size fuse should I use for the power leads? Any advice will be appreciated.

Please, no comments like:

"HT's are junk. Get a real radio."
"You don't want to do that. You should get an ICOM blah blah blah."
Or any general condescension or "wise-acreage". (Yes, I'm a bit sensitive.)

3333. Re: Dumbing down?! How could it get any dumber?

>offend others with my "filthy" signal.

Give us a break. There are plenty of good inexpensive mobile
radios around both new and used that cost about the same as an HT
(new or used). Admit it. You didn't shop around. You went out and
bought the 1st radio you could find at the closest store you
could find.

If you chose an HT as a compromise between not having the money to
buy two radios (one for the car and one for your shack) that's one
thing. Fine, but don't whine later because people can't hear you
when you key up.

>I'm tired of hearing comments from clowns regarding how bad HT's are.

I'm so sorry that the truth hurts. Excuse me for not being politically
correct and coddling you with "oh, that's okay, we'll try to hear every
other word in your crappy transmission and try to hold an intelligent
conversation with you".

>I do happen to know something about antennas and have
>taken both power and antenna theory courses in college.

Maybe you should retake them. 500 milliwatts into a "dummy load"
stub-ducky <> 5 watts into a ringo ranger vertical. If people
can't hear you, don't blame us.

3336. QRP-L

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-19 00:00:00 UTC
From: adams@chuck.dallas.sgi.com
Message-ID: <3pip0f$otc@murrow.corp.sgi.com>
Source record: 246216

Gang,

The qrp-l mail server has been at netcom.com for sometime, but as
of this day it will be moved.

This will allow the group to move from majordomo site to a ListProc
6.0c server and allow us to have the same site as a ftp server, www
server, and the list goes on.

So, if you have interest in QRP topics, then in order to subscribe
you send email to

LISTSERV@LEHIGH.EDU

in body of message place

SUBSCRIBE QRP-L your_name your_call

and you will get back an information message explaining how to get a
daily digest, get to the ftp files, etc. starting out with the
following

---start of information---

Welcome to the Internet QRP mailing list!

The QRP mailing list is open for discussion of any subjects relating to
low-power amateur radio operation. Example topics: portable operation,
equipment design and construction, solar and battery power, QRPp, contesting,
kit building, ...

If you ever want to remove yourself from this list send the following
command, in the body of an e-mail message, to listserv@Lehigh.EDU:

UNSUBSCRIBE QRP-L

NOTE PLEASE: this is not the same address as the posting address, i.e. the
address to which you send messages to go to the other members of the list.

...stuff deleted...

This list was started by Chuck Adams,K5FO,(adams@sgi.com) by an announcment on
the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M,
maintained the mailing lists and FTP area from then through August 1994 on a
system at Thinking Machines Inc, Think.COM. Then it was moved to
qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all
his hard work during the time that QRP-L was on netcom.com. The Archives-old
directory on ftp.Lehigh.EDU has subdirectories for 1993, 1994, and 1995 that
will contain the daily information, where 930506 is for May 6, 1993 messages

posted during that day.

... more stuff deleted...
----EOT----
This move will speed up turnaround and relieve netcom.com of some of it's load.
The archives for qrp-l now contains over 15MB of traffic over the past two
years of operation at two different sites. All previous messages are archived
at the new site and several other sites also.

The information sent to new subscribers will give the mailing address, etc.
It is not given here so that there will be no confusion and cause individuals
to send subscribe messages to the posting address. :-)

dit dit

3337. GE M-PA ???

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-19 00:00:00 UTC
From: had@halcyon.com
Message-ID: <NEWTNews.21075.800929880.had@had>
Source record: 246217
Cross-posted to: sci.electronics,rec.radio.amateur.misc,rec.radio.amateur.equipment

Hi to all.

I have a Ericssaon GE M-PA. This one is in the military low UHF band, the freqs. programmed in are in the 406 to 413 range. The model # is PAPATH and appears to have been made for the Army.

Here's the question is this radio "keyboard programable" or does it require special programing hardware/software.

This perticular radio only has the upper 4 buttons available, labeled 'step', 'scan', 'spc' and '2nd', the remaining 12 positions, 1-0 and * _ are on the circuit card but are hidden behind the front panel.

Any chance this radio can go up into the ham UHF band 440-450.

Any information would be helpful and thanks in advance.

>someone, etc. Some leeway is good, as long as it isn't abused.

You seem to be taking quite a hard line -- is the repeater that busy? I haven't found too many repeaters in the Los Angeles area, not withstanding one or two on 2M, that are so busy as to preclude ragchewing just to keep them active -- even by people that probably COULD work simplex. They could also just use the landline, if you're going to go that far.

I experienced a strange thing yesterday. I was on my way home
using a mag mount 2 meter HAM antenna with my scanner. There was
a steady driving rain but I didn't hear any thunder. I went to touch
my scanner to do something and I got a significant shock, one that hurt for
an hour. The scanner was ok and later I tried to feel around
again and no shock. It was so strong it is hard to believe it came from the
DC from the scanner. Could it have been a electrical discharge
of some sort coming from the antenna? Should I dismount the mag mount
in storms?

Source record: 246221

You wrote:
>I am confused about the differences between the following
>meters; could someone please explain thier use to me.

Briefly:

>RF Power Meter

Measures RF power (Voltage x Current if they're in phase).

>SWR Meter

Measures the RF power reflected by a mismatched load.

>Field Strength Meter

Measures the field strength (voltage) of RF at a distance from the
transmit antenna.

>S-Meter

Used in receivers to measure the strength of received signals.

>DIP Meter

A tuneable oscillator with its frequency-determining coil mounted externally.
The meter can be used to determine the resonant frequency of unknown
circuits or components.

>SWR Analyzer

Basically the same as an SWR meter, although the term may indicate that
additional functions have been included in the design.

> could find.

So what? I don't want a mobile radio. And I'm certainly not claiming
that HT's can compete with good power and an antenna.

> If you chose an HT as a compromise between not having the money to
> buy two radios (one for the car and one for your shack) that's one
> thing. Fine, but don't whine later because people can't hear you
> when you key up.

Huh?! I never whined about people not being able to hear me! I
know full well that a lot of people can't hear me, especially in
simplex mode. And if they say my signal is poor, I certainly don't
keep jabbering on and on. I end the QSO quickly. I just complained
about the "wannabe" comment. If my signal is poor, I don't expect
people to want to talk to me. That's why I ask how my signal is.

>
> I'm so sorry that the truth hurts. Excuse me for not being politically
> correct and coddling you with "oh, that's okay, we'll try to hear every
> other word in your crappy transmission and try to hold an intelligent
> conversation with you".

Again, if my transmission is poor, they can tell me, and I'll be glad
to talk elsewhere. I don't like a poor transmission any more than
you do.

> Maybe you should retake them. 500 milliwatts into a "dummy load"
> stub-ducky <> 5 watts into a ringo ranger vertical. If people
> can't hear you, don't blame us.

Blame you?! That's like blaming Corvette owners because my Beetle
takes 30 seconds to go 0-60. I'm not an idiot. I'm complaining
about the lousy attitudes of the people who can hear me. If you
think I'm saying HT's are on the same par as mobiles or others rigs,
you're mistaken.

John Soo-Hoo (jsoohoo@netcom.com) recently wrote
in <jsoohooD8sJxy.375@netcom.com>:

: Currently there is only ONE frequency dedicated to simplex on 450 and in
: SO CAL this frequency is often busy.

Try to think of this as a band planning issue. Southern California as well as the rest of the country has over Five MHz of simplex Uhf spectrum. Your radio may only operate in one third of the band. Yes, the third of the band used and coordinated to repeater operations. You would complain even louder if your 2meter radio only operated in a third of that band used by repeaters.

Here in Northern California members commonly talk simplex on the output of their repeaters. Since not everyone can hear them, they never expect to have exclusive use.

Simplex fm use on 446.000 , 441.000 and 446.500 is in our repeater sub-band 441.500 is a digital packet simplex frequency. Different areas of the country may have different uses due to their local band plans.

John Soo-Hoo (jsoohoo@netcom.com) recently wrote
in <jsoohooD8sI7F.MFq@netcom.com>:

: One nice example that can be seen is on the pair designated for testing
: in SO CAL. That frequency was designated for future repeater to testing
: purposes, but some folks set things up and never left the pair. Now there
: must be 3-4 repeaters that use that pair with extensive overlapping coverage
: and they all get along.
:
: I'm observing a group of folks who want to open up a repeater on 440. So
: far 3 letters have been sent to SCRBBA (3 different addresses listed for this
: organization) and so far they haven't gotten a single reply from them in
: a over a month now. I suspect SCRBBA may be ignoring this group because
: they are not part of the "good 'ol boys". If this is so, SCRBBA is not
: serving the ham community and the ham community should consider not to
: recognize SCRBBA as the coordinating committee for SO CAL. Things don't
: get that bad, because for a while SCRBBA has done a good job. But they
: need to offer some answers to people they are suppose to be overseeing.

If the coordinator recommended frequencies to everyone who wanted to open
up a repeater on the band, you would find a bunch of ego dreams, paper
repeaters and beacons. If your friends are not all ready on the test pair
they obviously have nothing to coordinate. Once they have a real repeater
with a known coverage area, the serious coordination process begins. If
they are serious they will get the policy and procedures for coordination,
so they know the steps they have to take to accomplish their goal.

I bet SCRRBA gets three or four enquiries a week, say two hundred a year,
only ten of these are really serious and show up on the test pairs to be
coordinated. This is the only way a coordinator can see the coverage so
he can recommend a frequency that does not overlap an other coordinated
repeater.

Hmmm. As a life member of the ARRL and a ham for 32 years, I have some
reservations about letting the League take over the licensing role and
sending everyone an invitation to join. Granted, they are the big boy on
the block. Let's not forget however that they were somewhat (if not
mostly) responsible for the decline in amateur radio growth with their
stunning incentive licensing idea back in 1968. Now, they have to take
credit for making the test just short of a giveaway. Then again, their
membership is bigger than ever. I guess that was the plan. In less than
ten years expect the majority of league members to have no idea what a
directed net is or how to behave in one nor as extra's to even know how
to calculate Ohm's law. Ah. Progress.

Too bad you haven't absorbed it by now. Intercommunications requires
a common language. Morse encoding of alphanumerics isn't a language.
The things that are language don't need Morse to transmit them.
Assuming that they do is wrong. Sure, Morse *can* be used to transmit
common language elements, but so can every other modulation encoding
in use, including smoke signals and jungle drums. There is nothing
unique about Morse in this regard. What is unique about Morse is that
it is the only modulation encoding that enjoys a separate testing
status. Since Morse is unique in no other way, there's no reason for
it to remain unique in this either.

The RA delegate various aspects of licencing to the RSGB. The usual
method of achieving this is for the RSGB to ask for some new facility
(such as voice repeaters or special event stations). The RA say no on
the grounds that it is extra admin work for them so the RSGB counter by
offering to do the admin, thus overcoming the objection.

There is a bit more than that to the voice repeater saga but in general,
the RSGB do perform certain functions regarding licences. What they can
and can't do is fairly tightly defined and the RA still retain overall
control.

GC>You know very well that the above response was to the pereinnial claim
GC>that Morse gets through when nothing else will. That's not true, and
GC>NASA's use of better techniques, as long ago as the 1960s, is only an
GC>illustration of that. It's also true that VHF/UHF frequencies are good
GC>for short range voice and data operations, or global data operations
GC>via the Microsats using simple low power equipment and low profile
GC>antennas. But more to the point, low power data operations on HF will
GC>also span the globe. Manual Morse holds no advantage over some other
GC>digital encodings in that regard, in fact, it is at a considerable
GC>disadvantage to sone of the available techniques due to its incoherent
GC>nature.

Really hilarious Gary! Funny that hams are not using these techniques
you describe! He he, when was your last packet or Amtor or Clover
contact into Asia using 5 watts to an end-fed wire?

You sound so authoritative, but I think your argument against CW sounds
very hollow when squared against reality.

GC>>These exotic modes that you dream about are neither affordable nor common
GC>>amongst the world's hams.

GC>That's funny, I have had extended conversations with amateurs in over
GC>100 real countries using those digital methods. Our resident "live better
GC>digitally" Canadian claims 254 DX "countries" on digital modes. Seems the
GC>rest of the world isn't quite as backward as you'd have us think. Coherent
GC>techniques are neither exotic nor rare anymore. Thanks to the microelectroni
GC>revolution, which you apparently slept through, there are single chips, or
GC>simple chipsets, on the mass market that implement many of these techniques.
GC>Yes, these are available even to amateurs in Botswana or Gabon.

But the point was not to compare some rare fluke of propagation, rather
day to day reliability. You still can't beat CW. I know. I have tried
both. Packet is hopelessly slow on HF (even on VHF for that matter)
and RTTY gets you alot of errors unless you have an S-7 or better signal
at each end.

GC>>Thus, in the meantime we'll keep encouraging
GC>>folks to use this simple yet effective mode. It really has no equal
GC>>in that one can spend an afternoon building a transmitter and work the
GC>>world that evening.

(Unnlike these digital boxes that neither see nor hear nor speak!)

GC>I too can build a digital transmitter in an afternoon

ROTFLL! SURE you can Gary, SURE you can!

(it needs to vary only
GC>by one component from your OOK transmitter), and "work the world" that
GC>evening.

Collapses in a heap on floor chuckling! Ah I get it (sobers up!)
the one extra item is a pre-packaged, pre-programmed LSI sirface-mount
chip that someone ELSE built FOR you, that you just hook up to, no
doubt! That is not homebrewing, and it is not cheap either!

GC>(That's a misnomer, of course, since propagation won't necessarily permit
GC>working the *entire* world in one evening. I may be able to take advantage
GC>of automatic relay systems to circumvent that problem, however, but you
GC>won't.)

What do you think the NTS does every night?

GC>>Everytime you state this you forget to mention the complexity
GC>>of the FSK keyboard. I can make a handkey in 5 minutes.

GC>>I've got dozens of well-designed receiver circuits in front of me;
GC>>any of them could be built in one day. That evening I'll be decoding
GC>>Morse via my ear - what are you going to build to decode FSK signals?

GC>I'll probably use an advanced circuit that may take a couple of evenings
GC>to assemble, but such sophistication is not required. The very simple
GC>Baycom style modems that can easily fit in a RS-232 connector shell
GC>can be built in a few minutes.

And are about as useful for communicating as a pair of tin cans and
string.

GC>And it won't take months of wetware
GC>programming to decode the signals, either. If you insist on construction
GC>of the display system as well, rather than just using the home computing
GC>appliance, or an old scrounged terminal, then I built such a display
GC>several years ago from a single chip micro and a LED panel. It took
GC>under an hour to wirewrap it, and about 10 minutes to write the simple
GC>assembly language program to make it run.

Hilarious - that is only one small part of your "simple" digital rig
that you claim to be able to build just as quick and just as cheap as
his CW transmitter. I think you are really grasping at straws now!

GC>This sort of thing is really
GC>trivial, basically just a lookup table and a few timing loops. Of course
GC>I wouldn't bother to build such a thing today, I'd just use my old HP-100
GC>for the display. Once you get rid of the obsolete paradigm of components
GC>as only meaning discretes, building complex systems becomes easy.

So easy! Not!

Hi there

Last night there was a very nice opening to the South Pacific on 30 meters. I worked, among others, a ZK1DXC. The ZK1 prefix belongs to either North or South Cook Island...any DXers out there who can tell me which one ZK1DXC is?

Thanks!

On 19 May 1995 17:11:54 GMT Joel McClure (mcclure@cadcam.atg.gmeds.com) wrote in rec.radio.amateur.misc:
: I have an Audiovox 6A regulated power supply that I would like to
: power my HTX-202 with (w/external antenna, of course). I measured
: the voltage of the power supply, and it read 14.04 v. Is this too
: much for the 202? Also, what size fuse should I use for the power
: leads? Any advice will be appreciated.

The specs say the external power can be 7.2 to 13.8 volts, I don't imagine a less than 2% overvoltage would be intolerable. But you might want to check your power supply output with a 10% high a.c. input to be sure it really regulates well.

As to the fuse rating, the specs say it takes 1.1 A at 13.8 volts, but I'm sure this nominal, and varies with individual units. I would think a 2A fuse would be about right, but a 1.5 might give you more peace of mind, but possibly more aggravation -- fuses probably have a certain amount of variation from nominal specs, too.

The electrolytic capacitors in the HTX-202 and 404 are 16 volt units, which is standard for mobile equipment. I generally run mobile equipment in my shack off a regulated supply adjusted to about 14.25 volts, as most such units have noticeably better power output at the high end of the rated input voltage, and in fact to fully charge a lead-acid type storage battery you have to let the charging voltage go up to something around 14.2 to 14.4 volts. I have run my HTX-202 and 404 off my shack supply with no ill effects, but I don't use these units in that way much, so this may not be a good test.

There were some comments on the net about HTX-202s getting warm when run on external supplies, but I think this must depend on the unit and how heavy handed the user is on the PTT, it's not anything I have experienced myself.

If you wanted to lower the output of the power supply by a half volt, a silicon diode in series with the output would do the trick.

: GC>NASA's use of better techniques, as long ago as the 1960s, is only an
: GC>illustration of that. It's also true that VHF/UHF frequencies are good

: Really hilarious Gary! Funny that hams are not using these techniques
: you describe! He he, when was your last packet or Amtor or Clover
: contact into Asia using 5 watts to an end-fed wire?

: You sound so authoritative, but I think your argument against CW sounds
: very hollow when squared against reality.

How can CW, a OOK system with minimal coding (morse), be better then
Binary, non-coherent FSK? In a perfect world, the probability of bit error
is the same for the same S/N. In an imperfect world, OOK is slightly worse.
Cohernet, and M-ary techniques of FSK can surpass either of these modes
by quite a bit.

: GC>Yes, these are available even to amateurs in Botswana or Gabon.

: But the point was not to compare some rare fluke of propagation, rather
: day to day reliability. You still can't beat CW. I know. I have tried
: both. Packet is hopelessly slow on HF (even on VHF for that matter)
: and RTTY gets you alot of errors unless you have an S-7 or better signal
: at each end.

Your experience with packet being slow is due to the fact that
packet will retransmit on any error. Most human CW operators will ignore
a mistake or two, and guess based on content. By shrinking the packet size,
and adding a coding scheme like Viterbi, and some time diversity, packet
should be quite fast.

: (Unnlike these digital boxes that neither see nor hear nor speak!)

: GC>I too can build a digital transmitter in an afternoon

: ROTFLL! SURE you can Gary, SURE you can!

A digital transmitter is fairly simple. You can have two CW
transmitters do it if you want. Of course it isn't as simple as CW, but
it ain't hard. Receiving and decoding is a little trickier, but still not
that difficult.

: (it needs to vary only
: GC>by one component from your OOK transmitter), and "work the world" that
: GC>evening.

: Collapses in a heap on floor chuckling! Ah I get it (sobers up!)
: the one extra item is a pre-packaged, pre-programmed LSI sirface-mount
: chip that someone ELSE built FOR you, that you just hook up to, no
: doubt! That is not homebrewing, and it is not cheap either!

I've built FSK modems from op-amps. It's not bad. Of course,
a PLL and monolithic function generator might help a little bit:-).

FSK devices are not as simple as CW, but anyone that can build a CW
rig can build an FSK rig. As for reliability, FSK systems have CW beat,
except in the case of poor design.

|>at each end.

Gary didn't mention RTTY or HF packet, both of which use modulation schemes
dating back decades. Only OOK CW and AM forms of modulation predate these
antiquated techniques. It's truely unfortunate that amateurs cling to
ancient methods when better methods exist. If you really believe that
simple OOK of a carrier with no time base can provide better weak signal
communication than almost any coherent modulation technique, then you
need to crack open any book on communictions and do a little reading.

Also your statement about packet being slow on VHF is amusing if not down
right laughable coming from someone advocating manually keyed Morse Code as
an alternative. What a joke! The raw data rate for the most common VHF
packet is 1200 bits/second or 120 characters/second or 1440 WPM. Even
with numerous retries and collisions, it's hard to fathom that your
manually keyed Morse Code comes within an order of magnitude of VHF packet.
Or can you send faster than the current world record by a factor of 20?
Plus 2400, 4800, 9600, and 56,000 baud radio modems are readily available.
Want to compare your puny 20 WPM with 67,200 WPM? Hahahahahahaha

|>GC>>Thus, in the meantime we'll keep encouraging

|>
|>GC>I too can build a digital transmitter in an afternoon
|>
|>ROTFLL! SURE you can Gary, SURE you can!

Just open any Radio Communication components catalog from Philips or
Motorola and check out the application notes. If you don't believe one
of those circuits can be built in an afternoon, you must be a very slow
builder.

|>(it needs to vary only
|>GC>by one component from your OOK transmitter), and "work the world" that
|>GC>evening.
|>

|>Collapses in a heap on floor chuckling! Ah I get it (sobers up!)
|>the one extra item is a pre-packaged, pre-programmed LSI sirface-mount
|>chip that someone ELSE built FOR you, that you just hook up to, no
|>doubt! That is not homebrewing, and it is not cheap either!

Ah yes, another in the Jeff Herman build it from sand school. It's OK to use a tube instead of blowing your own glass, but using a set of prepackaged solid state devices isn't OK? You guys crack me up. It's no wonder that you can't see past simple OOK. It's awfully hard to build something to run CLOVER completely out of tubes. Probably harder yet to build it out of sand. ;-)

As for expense, it's a lot cheaper to buy a couple $1-10 chips than build the various power supplies and HV stuff necessary to use hollow state. How expensive do you think these chips are? Single chip computers can be had for under $5, and FSK modem chips for little more.

Although you bring up a good point. If we start getting much further behind the state of the art, we won't get the cost benefits of mass production. The reason you can buy most of these chips for peanuts is because people that build communications equipment for living are currently using them in consumer electronics gear. Why is it do you think that something like the Curtis keyer chip which is a relatively simple chip sells for around $25, whereas complex microprocessors can be had for much less? It's all a matter of staying on the current technology curve. Ten years ago when 1200 baud VHF was getting started, Bell 202 modems were also pretty plentiful. Now we've stayed with that technology while the rest of the world has progressed 3-4 generations. As a result, it is already getting harder and harder to find modem chips that will do Bell 202 style modulation.

|>GC>(That's a misnomer, of course, since propagation won't necessarily permit
|>GC>working the *entire* world in one evening. I may be able to take advantage
|>GC>of automatic relay systems to circumvent that problem, however, but you
|>GC>won't.)
|>
|>What do you think the NTS does every night?

I didn't realize NTS had automatic Morse Code relay stations. This is an amazing piece of news. How do I use one? Does it relay in real time?

|>So easy! Not!

It's safe to say that you could build almost any digital system in less time than it took to train your wetware modem. What you CW and sand die hards seem to forget is that what was once science fiction is now common place and what is leading edge today will be passe in 5-10 years (bought a computer lately? How about a cordless or cellular phone? Or even an HT.) The rate of change in the world is increasing as is the rate of technology improvement. It is obvious to anyone willing to take their head out of the sand that we can be part of that change and communicate in ways we never dreamed, or we can leave our heads in the sand and get left in the dust. For an interesting

perspective on this, visit Motorola's communications museum in Schaumburg, Illinois and catch their presentation entitled "In one man's lifetime" or something similar to that.

And please, take this absurd argument to rec.radio.amateur.policy where it belongs.

FIELD DAY 1995 - CLASS D & E OPERATORS CHALLENGE
==========

For many years I have been presenting to the ARRL a new thinking on the rules of Field Day and the establishment of new listings for Class D & E stations.

Everyone assumes that the whole country is in need of emergency communications at the same time and that the participation of stations operating from home or on commercial power are of no benefit to the operation.

I disagree with this concept.

A few years ago during Field Day we had an earthquake in California that many stations knew nothing about until after Field Day because the were busy working QSOs any place the wanted.

I proposed after that that the next years bonus points be for contacts within a designated emergency area which would coincide with the call district of the calendar year each year. To ensure Field Day stations copied the W1AW Special Bulletin on Field Day the announcement of these bonus points should have been made a part of the Special Field Day Bulletin as in past years when the slow speed CW contacts were the bonus points.

Besides adding a better goal to the operation of Field Day other than just a contest once the preperation stage was completed, the training of operators in selection of the proper band and time of day to contact the needed area seemed an important part of preparedness for emergency communications.

In light of the Oklahoma Bombing, this year being a #5 would seem appropriate to try such a concept. A test of this idea voluntarily by operators and the results gathered for a report to the ARRL might just add some extra ideas to the Field Day concept.

I would propose 2 operating concepts be tried by stations operating Field Day this year and the reports sent to me so that a presentation with data can be made to the ARRL.

I would encourage ALL stations to participate in Field Day including fixed stations under either the D or E categories.

Stations may even enlist other operators to use multiple transmitters as the portable stations do. This on the basis that not all parts of the country are under an emergency condition. Fixed operation in the 5th call area would be excluded as it is the "effected emergency area."

I would encourage stations to make as many contacts with stations in the 5th call area under the assumption that they are the emergency area in need of communications.

Following Field Day, in addition to submitting your scores to the ARRL, I would like to hear from all Class D & E statiions as to their total number of QSO's during Field Day and the number of QSO's with the 5th call area.

Please also include your opinion regarding the concept of contacting stations in a designated emergency area as a valid principle to be included in Field Day and whether participation by fixed stations outside the emergency area should be encouraged.

A report of these comments will be made to the ARRL as data on these ideas. It is now 3 years since they were proposed to the ARRL CAC with no reply.

This proposed additional activity by no means is intended to denegrate the concept of Field Day as operated by the ARRL, in fact, personally I have not missed participation in Field Day since 1958 when introduced to it by friends and have never missed operating since becoming licensed.

The idea is to enhance the meaning of the operation beyond a mere portable contest and to develope what I consider the most important aspect of any emergency operation - ability to contact the needed area. What good are 1,000 QSO's with New York when the emergency is in Chicago ? Not a one of those 1,000 QSO's did any good to the people in Chicago.

This concept is also to demonstarte the importance of the fixed station on the other end of a portable QSO as needed to complete an emergency message. I believe Class D & E stations should be reported just as importantly rather than an afterfact at the end of the ARRL Field Day report.

Comments on any aspect of this message are welcome.

My 8 year old son played with my TS-520 while the antena was disconnected
from the Antena Tuner and now it is dead on transmit.

The symptoms are.....
RX works fine.
No ALC indication at all while trying to Tune.
Meter Readings while trying to tune:
HV 900V
IP 0
ALC 0
RF 0

If you switch from tune to CW then the only difference is a change in the
IP fro 0 to 50ma.

Does anyone have a service manual for the TS-520?
Can I beg or Buy a copy. I have a good set of Meters Scopes etc..
availible, but I bought the rig at a Flea market and have no documentation
of any kind.

The rig worked fine before it's encounter with child.

Thanks for any help you can provide.

3369. What is "This Week in Amateur Radio"?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-20 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <Be2+jD-.sanderman@delphi.com>
Source record: 246163

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, produced by Community Video Associates, Inc., a New York State not-for-profit corporation based in Albany, New York. The program is carried on the "Tech Talk Network" each Saturday at 7:30 PM (EDT) on the Telstar 302 commercial communications satellite, transponder 21 (11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz.

Host Stephan Anderman, WA3RKB, opens each edition with the latest ARRL bulletins and other amateur radio news. In addition to the national "Newsline" and "RAIN" services, the program also carries other features unavailable anywhere else. Vern Jackson, WA0RCR, provides weekly updates of upcoming contests and conventions. George Bowen, N2LQS, covers special event stations and the weekly propagation forecast. Dave Mullenix, N9LTD, and Bruce Paige, KK5DO, present their "EZSATS" feature, demonstrating the ease and simplicity of working the amateur satellites and hams aboard manned spacecraft. And noted UFO enthusiast Don Ecker, KE6RVO, discusses the use of RF and amateur radio in tracking extraterrestrials in his new feature, "This Week in UFOs".

"This Week in Amateur Radio" is North America's only satellite-delivered audio bulletin service. Transponder time and uplink equipment are provided by SKYVISION as a service to the amateur radio community. Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals.

For further information or to become an affiliate, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @ WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM or SANDERMAN@DELPHI.COM.

COAX TABLE

Got out the Belden & Pasternack catalogs.
Far as I know, the RG numbers look random. Probably assigned by a clerk
in the Pentagon during WW2. Below is a short table
of the various coaxes and the more important characteristics.

impedence attenuation per 100' velocity max voltage RMSkv
@ 50MHz @ 1GHz
RG6U 75 1.5 dB 11 dB 78% (foam) 0.6kv
RG8U 52 1.2 9 66 (polyethlene) 5kv
RG8U 50 1.1 78 (foam) 0.6
RG8X 50 13.5 2.5
RG11U 75 1.3 9 66 (poly) 5
RG11U 75 1.0 78 (foam) 0.6
RG55B/U 53.5 16.5 1.9
RG58U 53 3.1 20 66 (poly) 1.9kv
RG58U 50 3.2 78 (foam) 0.2kv
RG59U 73 2.4 11.5 66 (poly) 2.3
RG62U 93 1.9 8.5 84 (air & poly) 0.7kv
RG59U 75 2.1 78 (foam) 0.3kv
RG71U 93 1.9 8.5 84 (air & poly) 0.7
RG108A/U 78 26.2 1.0
RG122U 50 4.5 29.2 66 (poly) 1.9
RG140U 75 13 2.3
RG141U 50 2.1 13 69 (teflon) 1.9
RG142U 50 2.7 13 69 " 1.9
RG178U 50 10.5 45 69 " 1.0
RG179U 75 8.5 25 69 " 1.2
RG180U 95 4.6 16.5 69 " 1.5
RG187U 75 8.5 25 69 " 1.2
RG188U 50 9.6 30 69 " 1.2
RG196U 50 10.5 45 69 " 1.2
RG303U 50 2.1 13 69 " 1.9
RG302U 75 13 2.3
RG316U 50 9.4 30 69 " 1.2
RG393U 50 7.5 5
RG400U 50 13 1.9
RG401U 50 7.5 (semi rigid) 3
RG402U 50 13 " 2.5
RG405U 50 22 " 2
RG174U 50 6.6 31 66 (poly) 1.5
RG210U 93 3.1 0.75

RG213U 50 1.6 9 66 " 5
RG214U 50 1.6 9 66 " 5
RG217U 50 5.8 7
RG218U 50 3.8 11Kv
RG219U 50 3.8 11
RG223U 50 3.1 16.5 66 " 1.9
RG225U 50 7.5 5
RG9U 51 1.6 66 " 5
ethernet 50 1.2 78 (foam) 0.6
22B/U 95 twisted pair 2.1 66 (poly) ?
twin lead 300 0.8 <-worse when wet! 80 (poly) ?
8281 75 9.2 2.9
9913 50 4.5 0.6
9914 50 6 0.6
8218 75 20 0.6

these are all the RG#'s I found. The attenuation curves generally follow a straight line when drawn on log-log graph paper. The slope is such that a coax with 2dB at 50Mhz will be 0.8 at 10Mhz. Most coaxes have about the same slope. So, one need only look at the same freq when comparing attenuations when selecting which coax you're gonna use from under the shack table (not strictly true, but close enough for "goverment" work! :-)). Voltage ratings: note that foam dielectric cannot take as much voltage as solid dielectric.

Any time I want something from the Shack, and I'm not sure I know where it is, I point it out in the catalog as proof to the 'droid that such an item exists, and then leave it up to them to find it. (Lately that entails them asking the computer if it's in stock, after which they embark on a search for it. I am left to wonder who STOCKS the damn place, elves at night when no one is around?)

Chris

In article <D8G7p5.KEt@news.hawaii.edu>, jeffrey@math.hawaii.edu writes:

|>And I stand by my convictions: When almost an entire receiver is
|>available on a chip that receiver in no way should be labeled
|>`home made'. I think many on here have confused the definitions
|>of kit and homebrew.

So what are the principles you apply in deciding what is "home made" versus what is a kit? Is it part count? Using this measure means that building a transmatch is not "home made" as it has few components than even the single chip receiver by the time you add the necessary discrete support components most of these "single chip solutions" require. Or perhaps it is level of complexity? So if I design and build a packet TNC out of 10-20 chips, 30-100 discretes, and some software is that less "home made" than building a Colpitts oscillator out of 10 parts total?

Face it Jeff, using chips simply allows the designer/builder to move up some levels of abstraction. You don't design your circuits at the quantum mechanics level, so you're already dealing with components at an abstract level. Keep abstracting until you reach single chip receivers and now you can start to think about building something more sophisticated using that single chip receiver that you would never have been able to build due to complexity. Abstraction is a normal and regularly used process by everyone to deal with the complexity of the real world. Just because someone starts at a higher level of abstraction than you do when building something makes them no less of a home brewer.

Again, tell us the principles by which you judge something to be "home made" and we can then see whether your argument has any merit or is just so much hot air.

No, you most likely encountered a potent static discharge. Driving rain
can impart a rather significant electrical charge to something moving
through it. I wouldn't bother dismounting the antenna, just make sure the
antenna and radio are well connected to the chassis of the vehicle.

3379. The real hams test.

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-20 00:00:00 UTC
From: Burt Fisher <k1oik@ccsnet.com>
Message-ID: <3plq47$rji@alterdial.UU.NET>
Source record: 246173

This test is for ham radio operators:

1. Do you say QSL on voice?_____

2. Do you say "For ID" after your call?_____

3. Is it rare for you to have a contact longer than 20 minutes?_____

4. Do you check into traffic nets to up the "body count?"_____

5. Do you check into traffic nets for any reason?_____

6. Do you participate in contests and like it?_____

7. Are you overweight and hold an Extra Class license?_____

8. Have your worked more countries than the number of sexual encounters with your spouse?_____

9. Are you a regular on a two meter repeater?_____

10. Do you dislike children in general?_____

11. Do you ask for help and when received from a number of hams send out a general thank you to everyone in the world?_____

12. Do you think it is wrong to talk about politics or other interesting topics on ham radio?_____

How to Score:

Number of Yes answers:

2 or less- are you sure you are a ham?
4 to 6- you are on the edge of being human or ham.
6 to 8-you are a typical ham-very boring.
8 to 1O-check your pulse, if you find one re-take test.
1O or more. Call the funeral home, send your name into QST as a Silent Key.
=1A

JA> > Greg Becker NA2N
JA> > gb546@bard.edu

Since you asked....

1. I read this stuff offline and your file came to my harddrive before I had any knowledge that it was there. I suspect quite a lot of readers here use an offline reader just as I do. But it *was* only a small inconvience for me to delete the file which, of course, I didn't even try to read.

2. I suspect that only a VERY small percentage (less than 1%?) of folks here would even consider going hundreds of miles to a (small? local

interest? insignificant?) hamfest in Van Wert? (where the hell is van wert) Ohio specially since a lot have already been to Ohio recently for a *real* Hamfest. I wouldn't attend your fest if it was 50 miles from me.

3. YOU need to learn some manners, and some common sense.

So, I will have to agree.

You did ask, didn't you?

K5JCM, Tulsa

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: Too bad you haven't absorbed it by now. Intercommunications requires
: a common language. Morse encoding of alphanumerics isn't a language.
: The things that are language don't need Morse to transmit them.
: Assuming that they do is wrong. Sure, Morse *can* be used to transmit
: common language elements, but so can every other modulation encoding
: in use, including smoke signals and jungle drums.

True.

: There is nothing
: unique about Morse in this regard. What is unique about Morse is that
: it is the only modulation encoding that enjoys a separate testing
: status.

Not true. The utility of Morse lies not in its (non) unique ability
to communicate "common language elements", but in the fact that it is
the only mode in *common use* world-wide that has this utility. You
can only reach a small minority of the world's hams using modern
digital modes.

: Since Morse is unique in no other way, there's no reason for
: it to remain unique in this either.

You may choose to test on topics which are "unique". I'd prefer they
test on topics which are useful.

>capacitors. Does this seem foreign to you? You underestimate your
>abilities.

I'm shocked, you actually use factory made wire? Why bending commercially produced wire is no more building from scratch than "snapping ICs into sockets". (and no less) A smart builder uses the most suitable parts for his project. In the last 15 to 20 years, that's come to mean ICs for most of the active devices. ICs are cheap, offer greater stability, and allow you to design more sophisticated equipment for less effort and time expended than the use of discretes permits. Of course you may still wind your own coils, or preferrably use tuned lines or printed inductors, and you may make your own air variables as well, since those are becoming harder to find in new production, though you'll more likely use alternatives such as varactors for many variable capacitance chores.

I was recently looking at the first receiver I built, after stumbling across it in a junkroom cleanup. It used a pair of 12AT7s in the first LO chain, a 6AF4 as the first RF stage, and a diode ring mixer using 6AL5s. The IF strip consisted of a pair of 6DJ8s, and the audio stages consisted of a pair of 6L6s driven by another 12AT7. As I recall, I worked on that thing for about 3 months, and it never did work that well.

Today, I could build a comparable receiver using a MC13135 and a LM386 in under 2 hours, and it would almost certainly work the first time, and perform at least as well as that old clunker ever did. (In fact I recently did build just such a receiver.) If I wanted even better performance, I might use MMICs and a SBL-1 up front and follow that by a NE604. It still wouldn't take weeks to build, and it would be as good as most commercially produced equipment.

Discretes still have a place, and I might tinker with a MESFET preamp for the receiver for a few days to try to get a stable

low noise unit, or I might not, considering that the basic receiver would have good performance as is.

Now with the other 2 months, 29 days, and 22 hours I had left over, I could spend a half an hour of that to wirewrap up a digital demodulator, and I'd be copying the better digital encodings before that old discrete receiver drifted past its first chirp. Or I could waste the time in wetware conditioning in order to manually decode those chirps and still be 3 months away from an effective communications system.

That's the power of modern microelectronics. It lets you do more with less, and do it cheaper, faster, and better.

Gary

>of some sort coming from the antenna? Should I dismount the mag mount
>in storms?

It sure could. That's because the antenna isn't bonded to the Faraday cage formed by the auto body as it would have been with a proper through hole mounting. Instead, it acted as a conduit of charge into the auto. If the scanner had been well bonded to the car body, there still shouldn't have been a shock to you, though it might have trashed the scanner, but if it is only screwed to the plastic dash, or left loose in the vehicle, then there would be no path for the discharge to take to reseal the Faraday cage, except through you.

(Lets all chant together now.) Drill the hole! Not only does it offer better RF performance, but it can be an electrical safety issue as well.

William, of course CW will be around a long time. Just look at AM,
it's technically obsolete as well, but some people still enjoy using
it. Or consider muzzleloading firearms, there are people still shooting
them, even though they've been technically obsolete for at least a
hundred years. As long as people don't purport those modes to be superior
to other, more modern, techniques, or demand that their mode get special
status in licensing, they aren't going to be chased away. As long as
they *do* continue to make those claims and demands, however, there
will be people right there to point out that the Emperor has no clothes.

>
>If you belong to the ARRL you are a FOOL in capital letters!.

Geez, flamebait if I ever saw it. Always the fish, however, I'll rise to the occasion. The ARRL does operate a publishing operation that is almost unparalleled for a non-professional membership organization. While the publications aren't peer reviewed in the way that professional organization publications sometimes are, the information content is quite high, and fairly technically useful nonetheless. And, it's noticably cheaper than the output of professional technical publishing operations. To an extent, you get what you pay for.

Nor is the ARRL as politically effective as some other organizations with the numbers and finances it should be able to tap, but nonetheless it's the best we've got right now, and there don't appear to be any effective alternative advocacy organizations around for US amateurs to support.

The League has certainly taken some boneheaded positions, as (dis)Incentive Licensing and the continued insistance on Morse testing indicate, but it has also done a fair amount of good, as the recent aquisition of 219-220 MHz replacement spectrum shows. (One could argue that the loss of 220-222 MHz shouldn't have happened if a truly effective advocacy operation had been in place, still, damage control is better than just abandoning the fight.)

It seems better to me to embrace the positive achievements of the ARRL, and work internally to reform the bad elements of League policy, than it is to simply walk away and let it continue to *appear* by default to represent all of amateur radio without any input from members of the amateur community who don't blindly subscribe to the official League line.

It might be different if there were a strong alternative organization. Competition is often healthy, and it might be possible to have more effect by voting with our feet and pocketbooks. But where is that alternative?

Hmmm. Sounds like the screen circuit may be shorted, or the tubes may
have bought it. Take a look at the screen voltage on the tubes, and
look for any cracked or discolored resistors nearby. The driver is
probably Ok, as indicated by the feedthrough when key down.

>about how many hams actually use such modes. Not even a dedicated
>digital devotee could pretend to believe that even a respectable
>minority of HF ham shacks in the world have computers and modems.

What it illustrates is that hams in those countries *can* get on
digital. It's not an impossibility for them. That many choose to
remain with antiquated methods may say something about their state
of brainwashing by the current requirements, or it may say something
about their fossilized level of technical knowledge, or it may say
something else. What it doesn't say, is that manual Morse operation
is superior. Certainly, in the 1920s much the same things could have
been said about spark. It was more common than CW, and capable of
being generated with cruder equipment. That didn't mean it was better.

>At the risk of having Todd post a demand to provide "independent,
>verifiable evidence", I'd guess that the number of such stations is
>less than 5 percent. I'd also guess that the number of amateurs in
>the United States using "modern digital" modes on HF is not much
>higher.

Are you surprised? You shouldn't be. The current regulations are
slanted heavily against modern digital communications on HF. First,
you have to demonstrate you can ride a horse before being allowed
to drive a Pinto in order to even get on HF. Second, encodings and

baudrates are limited by regulation to levels responsive to the
technical capabilities of 20 years ago. Etc. You know the drill.

>By the way, working 100+ countries on digital is quite impressive.

Actually it was pretty trivial. No special Dxing efforts were attempted,
just striking up conversations with those found on the bands. It helped,
no doubt, that it's the only mode I bother to use on HF, but I never seem
to lack for someone with which to converse. If I were to go days without
a contact, then I'd grant that digital operations on HF are uncommon,
but that hasn't happened. I have little hope of living long enough to
have conversations with 100% of the hams on HF, and I doubt anyone else
could either, regardless of the modes they choose to use. 5% of available
stations is more than plenty to make striking up conversations with new
people a regular occurrance.

>Isn't it sad that working 100 countries on CW is so common-place
>that it hardly impresses anyone? Don't you just hate those old,
>common modes? I don't know why I'm so taken with a mode that so
>many people use. I mean, its so *ordinary*, don'cha think?

Indeed. It's hardly more difficult than dialing phone numbers at
random. I've never really understood people who strive to briefly
contact as many other people as possible, though. I like to exchange
views and ideas with people. That necessarily limits the number of
stations I can contact in a lifetime of operating. That there are
others out there that I may never contact doesn't bother me at all.

>Maybe I
>should throw away my key and just live better digitally. Heck, my KAM
>will send and receive CW just fine...if I ever feel a need to talk to
>all those *other* hams...and just think of the thru-put! Now, if I
>could just get my typing speed up to my code speed...

We can fix that. We'll just change the tests so that you have to
be able to type 60 WPM to gain access to HF, and 100 WPM to gain
access to the choicest bits of spectrum. Makes about as much
sense as the current requirements.

>way, you don't get to program any ROMs with a machine you didn't build
>yourself. You also make the printed circuit board yourself. I'm sure you can
>see where this is going. Jeff did say FROM SCRATCH. It is possible to build a
>working radio from a piece of copperclad, some discrete components, a soldering
>iron and solder, and nothing else.

It's *possible* to build a radio from a hunk of galena and a cats whisker too. That doesn't mean it's *desirable* do do so. If you insist on the builder constructing his own ROM burner, then why doesn't it follow that we insist you make your own soldering iron, and copperclad board, and discrete components? Where do you draw the line? Ultimately, you're down to mining and refining your own ores if you follow this line of reasoning.

>WHY do it? To learn about radios.

Which radios? The ones your grandfather used? Modern radios use fewer and fewer discretes. If you want to learn about modern radio, you need to be familiar with modern parts and techniques.

>You've eliminated the need to learn a PCB CAD tool,

A nice tool, but not necessary to build with ICs.

>to know how to make a good PCB,

Again, nice to know, but not essential to many building projects with ICs. Dead bug style construction still works for most circuits below UHF. You really don't even need to know how to solder for many projects, wirewrap works fine. You'll probably want to develop skills with CAD and PC board fabrication if you intend to do a lot of building. And skills you learn working with ICs and PCBs will be useful when you service modern radios. Few modern radios still use tie points and rat's nest wiring. If that's the way you build, many of your skills won't transfer to more modern techniques. You'll have painted yourself into a technological backwater.

>to learn machine-language programming, to
>learn how to apply DDS, etc, etc...

These are useful skills, and mostly directly transferable to modern
technological equipment. It isn't necessary to acquire all of them
at once before attempting a project, however.

>This can make the difference between a
>hopelessly formidable task and a possible one. It might make the difference
>between a technical ham and an appliance operator, no? Sophisticated stuff is
>fine, and advancing the art is fine, but you have to start somewhere. Not too
>many people go from zero to synthesized radio designer in one leap. They COULD
>go from zero to building their own radio by simply handing them the parts for
>a "dead-bug" style circuit and giving them a little coaching. Bottom line:
>simple has its place. Just because sophisticated exists doesn't negate that.

Sure, simple has its place, but simple doesn't have to mean crude or
unsophisticated. Today's radios are simpler than radios in the old days,
simpler in having a lower parts count, simpler to understand, simpler
to service, etc. But they certainly aren't less sophisticated. That's
because the parts do more, and do it on a more abstract level from the
point of view of the designer or repair tech.

An opamp is an example of this simplicity. It's one part with a simple
well defined transfer function. It's simple to build using it, it's
simple to understand the working of the circuit, and it's simple to
troubleshoot and repair. Now contrast that to an equivalent circuit
built with discretes. It's complex, likely unstable, difficult to
use, and difficult to troubleshoot. Yet both circuits do the same
thing. Which is better? Which is simpler for the beginner to tackle?

>This is true for CW vs digi-droid.

Not really. The radio part of CW vs FSK is only trivially different.
The only difference is between wetware conditioning and hardware
modem construction. The latter is much simpler and quicker to achieve
than the former.

>There are 412 members of Cactus. I don't have membership data on Crossbar.
>Would anyone like to tell these 412 people that the repeater club they support
>isn't "worthy" of a frequency simply because their systems are closed?

Well, lets see now. We have 412 amateurs permanently tying up 6.56% of
the available repeater spectrum in a state with well over 100,000 amateurs.
If this practice is followed across the band, and it seems to be, then
the 70 cm band in California could only accomodate 6,275 amateurs at
the spectrum consumption rate of Cactus. Seems like that shuts the other
90-some-odd percent of California amateurs out, permanently. That doesn't
appear to be an equitable use of public spectrum to me.

As long as closing the machine means a de facto closing of the spectrum
to other amateurs licensed to use that spectrum, there's a problem.

>>there are no amateurs left? Maybe that's what they are hoping for?
>
>Do you mean to say that new operators in Australia are only interested
>in packet? Why not introduce them to the dozen or so other modes?

Perhaps it's because people now coming to amateur radio expect to be
able to use modern communications methods. It's much like asking
shooters to use muzzleloaders instead of modern rifles for target
competitions or hunting. Some do, for the nostalgia, but most quite
properly expect to be able to use the best methods.

>CW and SSB do a great job for worldwide comunication.

Hmm, is that why everyone but fossilized amateurs are abandoning
CW? If it does such a great job, then why are the commercial and
military worlds abandoning it as quickly as possible for newer
digital methods? When everyone is out of step but you, it becomes
time to question your own pace.

>
>Bob

Where do you get these figures? Did you peruse SCRBBA's records? Or did you simply make them up? Please share your sources with the rest of us. Sitting up there in Berkeley obviously gives you an accurate perspective of the problems in Southern California.

I think that it is obvious that the hams that actually live here, and have some knowledge of what goes on with respect to 440 coordination, are aware that the present 440 coordination and utilization are completely unacceptable. The out of town contingent for some reason seems bent upon opining in the other direction. Beats me why they even care.

We are licensing hundreds of new Technicians a month in Southern California, and our hobby is growing and thriving. It doesn't take a rocket scientist to see that we can't allow a chosen few to monopolize a band like 440 that most dual band hand-helds is designed to access.

Should be fun.

3403. Re: Help with broken TS 520

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-21 00:00:00 UTC
From: paulbreed@aol.com
Message-ID: <3pnpid$m41@newsbf02.news.aol.com>
Source record: 246100

I 'm sorry for the bandwidth waste, but I fixed it.
The TS-520 is new to me and I didn't realize that the CARier
control affected the output. My son turned that down to zero and I
Got Zero output.

Sorry to have wasted the bandwidth

Humbly Paul Breed

3404. secret buttons on IC X2A

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-21 00:00:00 UTC
From: jpuckett@cc.weber.edu
Message-ID: <21MAY199511053500@cc.weber.edu>
Source record: 246101

Does anyone know the button combination on an ICOM X2A to allow this radio to scan outside the ham band? I would like to not have to use both a scanner and my handheld when one would do.

S T R A W B E R R Y M A N T R A R E C O R D S

To get zines distributed, Email us at the Email address below with a sample article and a description of the zine, or maybe even the whole zine, so we can make sure we want to distribute it, and if we say kuul, then send us some copies of the zine and yr in the catalog.
To get yr tapes distributed-Be good, and have nice sound quality. Send a good-sounding master tape and a master cover we can make black and white copies from to the address at the bottom. If you don't send a master cover, we'll just make one. Don't expect great artwork. John's taking drawing class.
We'll see what he can do. At least send a song list. The more you rock, the better. No Extreme-Hole Hearted Mr. Big shlock rock, please. We don't want Country or Offspring or Contemporary or R & B or Reggae or Rap tapes. So don't send them to us. If we don't like them, we put them away. Have any or all (?) of the following elements in yr music: rock, catchy rock, punk, or hardcore. Don't be lame, and, like we said, have nice sound quality.

Our royalty policy is real simple: When we distribute you, for each copy of the album you sell through us, (whether it's on vinyl or tape or cd) you get a dollar. Our royalty policy on zines is simple, too. You keep 70% of the money, we keep 30% of the money. If we (as in you and us) decide yr zine will be two dollars, we keep 60 cents for each sold zine. (60 cents just about covers postage costs. the zine department is really non-profit) The remaining $1.40 is yours! Because of this policy, we don't buy wholesale copies of zines in advance. mainly cos it's risky to us and yr zine gets more money this way.

*Online Zines: Don't wanna wait for snail mail to bring the zine to you?
Kuul! We'll Email it to you. Just send the money to the label address telling what zine you want and where we Email the zine to so you can download

it-and
the zine will be yours within seconds of receiving the money via a
download
file. Available when the catalog specifies "Online Version." Some zines
are
available Online only, some only by mail, some both. The royalty policies
for
Online Zines remain the same. (yes, postage costs don't exist when you
send
online zines, but really, it's not fair to the non-online zines. Some of
those zines have pictures and stuff, especially art/comic-type zines,
which
would be way impossible to do online. They don't have the advantage of not
paying for copying costs and postage. Just cos they have pix doesn't mean
they should lose money.)

SoundClips from Strawberry Mantra Records. Download 20-45 second long
samples as Wave Files from Strawberry Mantra releases.

Email the screen name below to request a SoundClip. I M P O R T A N
T!!!-Must
have a sound card to play these things. If you need help, after getting yr
clip, email me, i'll do what i can. Realize that mucho sound quality has
to
be sacrificed to make SoundClips possible, and that SoundClips do not at
ALL
represent the sound quality of Strawberry Mantra releases. If AOL said
"Welcome" when you signed on, then you probably, (unless yr sound runs
through that internal PC speaker that the modem noise comes through) can
play
these things.

All prices include tax and shipping and handling.

If you run a little label yrself, contact us. We'll trade tapes and
stuff.
We make sure the sound quality is nice on our releases. And, to smaller
bands, four-track recordings are just fine. There's a lot you can do with
four track recordings to make them sound really nice. We focus on the
music.
That's why we give the bands the extra money, to bring out new material.
It's
really money out of our pockets. But we're nice. We just want to make sure
we
don't make ourselves look bad by releasing poor-quality recordings. That's
all we ask. So talk to us! See ya later.
From John Mulhausen and Andrew Bales-Owners

Email SbryMantra@aol.com
Send zines, tapes and orders (cheks payable to John Mulhausen) to:
Strawberry Mantra Records
P.O. Box 701805

Tulsa, OK 74170-1805

COMING SOON
about 20 new albums are scheduled to be sent to us
The Video- a VHS tape w/ atticus finch, john, and others live. sketches, and
behind the scenes looks at kitty vamp and strawberry mantra records. probably
will cost 7 bux
Psychedelicatessen- Strawberry Mantra is putting together a compilation that
will be sent to 14 eager radio stations. (scary) and will include at least one
song from every band we distribute. (cept the ones on the kitty vamp
compilation, of course) and if yr on the label yr on the comp. and it's going
to 12 radio stations who happen to be rather interested in us. scary....
zines galore. zines zines zines
tell me right now if you want to be updated. we're gonna bring out good
stuff, but give us a second, the label is as of now, about 2 weeks old.

3406. >>Buying old receivers<<

In all likelihoond (sp) what you probably got was a little bit (it didn't feel like a little... did it?.... Ha Ha) of what is commonly know as "St Elmos' fire". Without getting into the technicallities of it (and I'm not sure if I can without looking up a lot of stuff to make sure I'm accurate), it is caused by moisture and the shearing action across a conducting device which results in the build up of static electricity. Althoug I have never witnessed it personally, such conditions can acutually result in the conducting device actually "glowing" with the charge. Ships at sea often experience this (remember "Moby Dick") as do aircraft.
A friend of mine was waken one night with the crackling noise his disconnected coax was making. According to him, the PL-259 was actually spitting sparks as it hung from the window. (Obviosly he didn't have an electrostatic discharge device connected to a ground...very unwise). On a mobile unit, I would think that your vehicle's ground should have taken care of this..... I'm surprised. Perhaps your radio was not properly mounted or was otherwise insulated from the vehicle's frame. This would be the case if you were running an HT off its internal battery.
In anycase, this sounds like what you experienced. I think I will do some further reading..... certainly an interesting experience. I'm glad that you were not hurt.

>>As for your idea to "just put up our own 440 repeaters",
>>my guess is that you are a recently licensed amateur, and that you never went through the "repeater wars" of the mid-1970's. Two meters was a band of near total anarchy in LA, and has never really recovered. It did not benefit from this kind of thinking, and neither did those who wanted to use it, at least in SoCal. If I'm wrong about your being recently licensed, I apologize in advance.

No apoligy is needed, but thanks for the offer.

I received a very disturbing letter to my home from a gentleman who did his best not to identify who he was, no return address, no call sign given but did sign his letter (rather illegibly) but none the less felt very threatened by my words here in one of my previous posts. he felt that his repeater (about $7K)'s worth may be in jepoardy because of my "threat" to start taking back the 440 band, getting rid of the good ol' boys network bla bla bla.

Lets examine one particular pair (the only one I can use for an example). 446.650 (pl 67hz). This pair is coordinated to W6FNO (the same trustee as 147.820) Johnstone peak. The pair was maintained on paper for quite some time without any operational equipment AT ALL until the validity of the coordination was challenged by George Sfair (KJ6TQ). Now I don't personally care for George (and the feeling is quite mutual) but the ONLY thing I admire is his testicular fortitude to plop an extremely high quality, high level OPEN repeater on this pair and it has taken off like wildfire.

W6FNO struggled to put the repeater back on the air, in fact even linked it to their 2m pair for a while, but, they lost. Not their coordination, that's for sure. They lost interest in fighting it out for the pair. Georges machine had the wattage and the coverage to drown out FNO. Notice they didn't escalate? The mature thing to do I guess.

It has hundreds of users, paying and non-paying. Paying members recieve special features like autopatch and newsletters, you know, the things that should cost extra. It's mighty nice of George to provide the repeater to the community free of charge and the people who choose to support it, pay for it. It's a belief that keeps the repeater open. Not the stupid good ol' boys system, or profit. The belief is to serve the Amateur Community and it will serve you.

As for Andy Renato (I think that's the name of ther guy who wrote me the nasty letter to my house) believe me, I could drop a "QUALITY" repeater on Mt. Lukens tomorrow on 440, 1.2 or 6M without any problems. Maybe I'll pull a George. Listen for months and find that paper repeater and

just do my own thing. What's SCRBBA going to do?? NOTHING. They have absolutely NO POWERS AT ALL. They are incapable of any legal action whatsoever. 446.650, a perfect example.

There is a grass roots movement already to do this. I believe the
acronym for the new comittee is SCARA or something like that. I can find
out..

>You (the ham community) have to organize to make changes.

Where to start...??

>My suggestion to hams that have 440 and want to use the band, but can't

GC>Too bad you haven't absorbed it by now. Intercommunications requires
GC>a common language. Morse encoding of alphanumerics isn't a language.
GC>The things that are language don't need Morse to transmit them.
GC>Assuming that they do is wrong. Sure, Morse *can* be used to transmit
GC>common language elements, but so can every other modulation encoding
GC>in use, including smoke signals and jungle drums. There is nothing
GC>unique about Morse in this regard. What is unique about Morse is that
GC>it is the only modulation encoding that enjoys a separate testing
GC>status. Since Morse is unique in no other way, there's no reason for
GC>it to remain unique in this either.

GC>Gary

Gary, it is also unique in that it was used universally in all
nations for many decades, and remains to this day the only encoding
scheme of that type that is read without any decoding device beyond
ears and brains by a significant number of people, especially those
in public service and in military service. It is also still used by
the world's largest employer, using straight keys. That being India
Railways. BTW - I don't think of CW as "modulation encoding" but
rather as "On/off encoding."

I think your spiel about "morse is not a language" is getting rather
redundant. We all got it the first 23 time, OK? :-)

All the best - Brian, AF4K

the
>approval rate is pretty high.

So, who determines who is and who isn't a jammer? Do you have some kind
of listening post committee who keeps a list?

Here's some call signs to evaluate.

KC6PQW- The biggest jammer ever on 2m
KD6KEK- The biggest jammer ever to hit amateur radio?

Ever heard of them?

Scott

SB DX @ ALLBBS $OPDX.207
Ohio/Penn DX Bulletin No. 207

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 207
BID: $OPDX.207
May 22, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, ARRL DX Bulletin, AD1C, WB2YQH & The 59(9) Report, N4AA, K4CEF & Southeastern Cluster Group, W5BOS, W5IJU, N6EK, N9TEL, WN9JAT, WX9E, 5D8DS, CT1ENQ, DF4RD, G3ZAY, GJ4ICD, JA1AAV, JH2PDS/1, LA4BN, ON1AIG & ESDX and VE3HO for the following DX information.

3A, MONACO. Luciano, I1YRL, will be active on all bands and modes from 3A-land June 10-11th, June 24-25th and sometime during September. Luc will probably sign 3A/I1YRL. QSL via CBA.

3D2, FIJI. Steve, AA6LF, will be joined by Bob, N6EK, for a Fiji operation using the calls 3D2LF and 3D2EK starting on May 29 for two weeks. During this time, they hope to activate both the Mamanuca Group (OC-121) and the Yasawa Group (OC-156) for IOTA chasers. 3D2LF QSL's to AA6BB and 3D2EK QSLs to N6EK. Only a couple of days are expected in each group, and the exact days within the two week window are not known. Operations will be on both SSB and CW, and every effort will be made to catch the European and East Coast US openings. SSB frequencies 14260, 21260 and 7058 plus or minus QRM. CW frequencies up 5 from the bottom of the band. Steve is in the middle of a seven year circumnavigation and DXpedition and recently arrived in Fiji after spending last winter in New Zealand. He is planning additional operations before spending next winter in Australia.

3W, VIETNAM. Reports from the Dayton HamVention indicate that Warren, KF7AY and other members from the Central Arizona DX Association will be going to Vietnam to be active around October 12th or 13th of this year. No other details are available at this moment.

4S, SRI LANKA. JA1AVV from the Tokyo PacketCluster states 4S7/JA4FM, Mr. Ikeda, is active on the low bands. Check between 1600-1700z on 7045, then 3795 - 3799 kHz or on 1909 kHz (simplex) calling CQ.

5B, CYPRUS. G4WFZ hopes to be active from a Cyprus Coastal Islands (un-numbered group) on May 26th and/or 27th. He may also be active during a short reconnaisance trip on May 22nd or 23rd.

7Q, MALAWI. Andre, ON1AIG, from the European Satellite DX-Fund (ESDX), reports that the next ESDX sponsored satellite DXpedition will be by Arie, PA3DUU, in Malawi from May 26th to June 4th. His callsign was not mentioned, but his activities will be on AO-10 and AO-13. HF activities will be only on RTTY. The ESDX station/equipment was put together by PJ2CU, PE1MPI, ON1AIG and PE1FAG. QSL via PA3DUU, Arie Nugteren, Dorpsstraat, 71, 2969 AD Oud-Alblas, Netherlands. (Airmail to US is about 1.50 green stamps, please include sufficient postage.)

9Q, REPUBLIC OF ZAIRE. Alex, PA3DZN (ex-9X3EE), is now active as 9Q2L and has been heard active on 20 meters CW (around 14025 kHz) between 2100 and 2330z.

CO0, SABANA ARCHIPELAGO, CUBA. CO2QQ, CO6CG, CO7KR, CT1EEB, CT1ESO, EA5BYP EA5YN, I8IYW and I0SNY will activate Sabana as a NEW-ONE for an IOTA, so presently it has no reference number at the moment. Activities will be May 25-29th, on all bands, all modes, satellites and including WARC bands. There will be a VHF station active on 50, 144 and 432 MHz for Grid Square hunters. The callsign will be CO0OTA. QSL via CT1ESO, Luis Gomes, P.O.Box 207, 8900 Vila Real de Santo Antonio, Portugal.

D4, REPUBLIC OF CAPE VERDE (6 meters DXpedition). Geoff, GJ4ICD, states he is ready for his D4 50MHz trip. He leaves London on May 30th. He will stay in Lisbon for the night, then continue onto Cape Verde the following day. Operation should commence on June 1st from the QTH of Julio D44BC. He will be using a Yaesu FT650 100 watts, with backup TS-60 100 watts which will be left with Julio when he leaves on June 14th for future 50 MHz operations. The callsign will be D44BC, and they will be active on 28885 kHz with a TS-940 and Alpha kw amp.

HV, VATICAN. Paolo, I2UIY, will be active in the upcoming CQWW WPX CW Contest as HV4NAC from Vatican City on all bands. QSL via IK0FVC (via the bureau is OK).

JW, Svalbard. JW2FL will be active from Bear Island, IOTA EU-027, from the end of May. Operations will mainly be on 14 MHz. JW2FL will initially work with a Cushcraft R5 and with 600 watts, but better antennas will be available later on.

KG4, GUANTANAMO BAY. Ken (ex-VP9MN) is on a 2 year assignment here and is now signing KG4MN. He will be active on all bands, CW and SSB, but he likes the WARC bands and CW. He is presently using the Club station but is awaiting the arrival of his station (a TS-850 and R-7 vertical). All QSLs via WB2YQH.

KL0, POPOF ISLANDS (ALASKA). Lanny will be active from IOTA NA-087 (located in the Shumagin Island Group) as W5BOS/KL0. Operations will be from July 12th starting at 2200z and ending 2300z July 15th. Activity will be on CW and SSB. QSL via W5BOS.

KP1 DXPEDITION CANCELLED. Vance, W5IJU, reports that due to ongoing transportation problems the May KP1 DXpedition has been cancelled. He reports that they will continue look for transportation and will try to activate KP1 at the end of the year or the start of 1996. Meanwhile, Vance is preparing for is CY9 trip in JULY.

OZ, LAESO ISLAND, DENMARK. Gabi, DG2TM and Frank, DL2SWW, for the second time will be active on the Island of Laeso from June 24th to July 14th. Laeso is a part of the Danish island Kattegat Group, and the IOTA reference number is EU-088. Their callsigns were not mentioned (probably will sign OZ/call) but their activity will be on 160-10 meters, 2 meters and on CW/SSB. QSLs via the homecalls.

P5, NORTH KOREA (UPDATE and Correction). The first authorized Amateur Radio operation took place from North Korea on May 14th. The callsign was P5/OH2AM (ed. Not P5/OH2BH as reported last week. GEEE! I get so used to typing Martti's callsign.... hihi). Some 20 QSOs were made on two occasions (14 MHz SSB and 7 MHz CW). The Finnish business group presented four Yaesu HF/VHF transceivers for training purposes, and for actual Amateur Radio activity which is now scheduled for later this year. The DPRK Telecom delegation will be participating in the first Beijing DX Convention this October. While there, they will observe Amateur Radio in action at BY1PK and will meet with CRSA officials, including IARU Liaison, Mr. Chen Ping, BZ1HAM.

TZ, MALI. TZ5RS was reported to be active. This station has been heard on May 20th around 14011 kHz between 0100 and 0200z. This station told Carl, N4AA (editor of QRZ DX), that he will be on for the next four days. Not much is known about this one, but TZ has been pretty silent since TZ6VV left the country. QSL TZ5RS to AA8AD.

VO2, CANADA (IOTA DXpedition). Martin, G3ZAY, will attempt to activate Battle Harbour Island (NA-044) for a few hours between 1300 and 2100z on June 20th. Then from 2030z on June 21st to 1930z on June 22nd, Martin will be at the community of Black Tickle on the Island of Ponds (NA-044). Both islands are in the Newfoundland Province Labrador Coast South Group. Martin's current plans are to try to activate Anniowaktook Island (from 1200-2200z, on the 24th and 25th) which lies 1.5kms NE of Hopedale and is an un-numbered IOTA in the Newfoundland Province Labrador Coast Centre Group. Due to the Field Day contest weekend, Martin will also try to be active from this island on Friday the 23rd (before the contest) from about 1800-2100z. The callsign to be used on all islands will be NU2L/VO2. QSL to his home call G3ZAY.

WP3, PUERTO RICO (NEW PREFIX). Paul/WX9E, Mike/N0BSH and Felipe/NP4Z will be teaming up to put one of the newly allocated Puerto Rican prefixes on the air during the CQWW WPX CW Contest. They will be signing WP3/WX9E during the contest, but it's unknown at this time if they will be doing a Multi/Single or a three transmitter Multi/Multi entry for the contest. It will be a last minute decision. It is also undetermined how much operating will be done outside of the contest, but QSLs for both NP3/N0BSH and WP3/WX9E are via WX9E.

XU, CAMBODIA. QSL Manager Laci, HA0HW, for XU95HA and XU7VK states that Sanyi and his wife Judit, who work for the Hungarian Embassy in Phnom Penh, will be leaving June 10th or 12th. Sanyi will be active everyday until they leave plus be an entry in the CQWW WPX CW Contest with XU95HA callsign. All QSLs for the XU95HA will be printed once this operation ends.

NEW!!!! VOICE OR FAX YOUR DX INFORMATION NOW! A FAX/ANSWERING Machine is now available 24 hours day. The number is 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch.
To access: 1) Dial Number. 2) Wait for first ring and dial four ones ("1111"). (Note: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

Does 'full access' mean full mode priveledges as well? Will the
intermediates be allowed FM on 10m for example?

3416. Credibility about 440 issues

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-21 00:00:00 UTC
From: jangus@skyld.grendel.com
Message-ID: <801093789snx@skyld.grendel.com>
Source record: 246113

In the continuing debate concerning 440 repeaters in Southern California, someone named Roger has been carrying on an (apparently) lopsided attack on SCRBBA. I just thought you might like to see the response he didn't feel was worth posting, but figured I *just had to see it*. In the words of just about any grade school teacher, "If it's good enough to pass around, it's good enough to share with the class."

Well Roger old buddy, what ever credibility you had just went away. Maybe next time, you should either pick something more people will agree with you on, or at least learn to deal with criticism.

Cajones? I'm right here. I've always been right here. Ask any of my friends, I don't have *ANY* problems telling people what I think. I don't threaten easily either. You want to settle things in a "manly" manner? I'm right here.

Well, guys, I just want to thank you for being mature men, sticking to the issue of this thread, and avoiding making personal comments about those with whom you disagree. It's good to see this kind of maturity.

As far as the Canter and Siegel comment goes, there's no response I can make to you, Jeff, that would be appropriate for a posting on a public newsgroup.

F**k you, a**hole. It's t**ds like you that make personal comments like
this that screw up the internet. I swear to God, it just doesn't seem
possible to have an intelligent discussion about an interesting issue
without a b**thole like yourself making inappropriate personal comments.
I'll bet you don't have the cajones to make a comment like that to my face,
old chap. But you're welcome to try it.

Roger J. Buffington (buffingt@scf.usc.edu) recently wrote
in <3pnm9d$g2k@usc.edu>:
: In article <3pjaqm$nd6@ccnet3.ccnet.com>, rwilkins@ccnet.com says...
:
: >I bet SCRRBA gets three or four enquiries a week, say two hundred a year,
: >only ten of these are really serious and show up on the test pairs to be
: >coordinated. This is the only way a coordinator can see the coverage so
: >he can recommend a frequency that does not overlap an other coordinated
: >repeater.

: Where do you get these figures? Did you peruse SCRBBA's records? Or did
: you simply make them up? Please share your sources with the rest of
: us. Sitting up there in Berkeley obviously gives you an accurate
: perspective of the problems in Southern California.

I did peruse the public records shown in various directories and see the
changes from year to year. There is an obvious turnover of repeaters.

: I think that it is obvious that the hams that actually live here, and have
: some knowledge of what goes on with respect to 440 coordination, are aware
: that the present 440 coordination and utilization are completely
: unacceptable. The out of town contingent for some reason seems bent upon
: opining in the other direction. Beats me why they even care.

Are my estimates too low? Are there hundreds of repeaters each with at
least ten hams on the test pairs waiting to share a channel with an other
group? One thinks it is easy to form these SCARE groups and talk about
putting repeaters on the air .... talk is cheap.

: We are licensing hundreds of new Technicians a month in Southern California,
: and our hobby is growing and thriving. It doesn't take a rocket scientist
: to see that we can't allow a chosen few to monopolize a band like 440 that
: most dual band hand-helds is designed to access.

Looks like you are a market driven ham. I say again...you will be
complaining about the 2.4 GHz pioneers having all the good systems, when
you buy your loss leader, market driven, off the shelf 2.4 GHz rig.

Found these new southern california clubs in one weeks listing in the fcc
database. Sombody is going to have fun trying to coordinate all these new
groups. Hopefully a few all ready have repeaters on the air.

KE6TZI Shangri La Amateur Radio Club

>Though I agree that "We're a truck driver" sounds pretty weird.

It's "the editorial *we*," as when a newspaper or magazine
editorialist uses "we" instead of "I" to posture that the view
expressed is that of a body or group of individuals rather than a
single individual. There's no logic to it; it's just an affectation.

The editorial *we* became a vogue in ham radio over half a century
ago--at around the same time hams started imagining that it came into
use "just yesterday" as yet another example of "dumbing down."

I have been looking at DSPs for about a month now and can't
make any headway. Has anyone produced a best buy/features list?

I am primarily interested in noise reduction (are there
different degrees of this?) and heterodyne removal.

Todd,

Anybody can buy boxes, plug them together, and communicate at high speed
with what emulates a state of the art communications technique. However,
that's not the point. The point is that amateur radio is one of the
remaining bastions that's preserving the radio arts. Condemning one mode
or another because it's alleged to be "obsolete" is simply inappropriate.

If I want reliable high-speed communications, I'll use commercial services
for that's where the state-of-the-art resides today. It's definitely no
longer in the amateur radio world. However, amateur radio is where I go
when I want to enjoy the pleasures of building a rig (not to be confused
with sticking IC's into a store-bought circuit board), or operating. I
have no need or desire to communicate at a gigabit/second. About 25 to 30
wpm is fast enough for me. It's more fun too.

73,

Tony

Actialy It easier to build a FSK xmiter than a CW one as a diode,capacitor
and variable resister with the diode in the frequency determing part of
the oscilator are much simpler than most keying curciuts.

I have actualy built CW transmision capabilities into some embeded system
so I only have to get one system working at a time. I of course replace
them with somthing more civilized but it does make development go faster.
